The Hy-o-mei medication, laden with nature's remedies, is breathed through the neat pocket inhaler that comes with every outfit, reaching every part of the bronchial tubes and Mr. Clark is making great changes killing at once the disease germs. On common fences the continuous wire stays are sure to bend and the locks to lose their grip under continual pressure of your horses or cattle. And once they do, the top wire, soon followed by those below, will sag and destroy the efficiency of your fence.

Nothing like that can happen to our Dillon Hinge-Stay Fence. The short, stiff hard steel wire in our hinge-stays cannot bend when the lateral wires are weighted down, owing to their being so short and jointed at each strand wire.

Pressure of a horse on the top wire brings the "hinges" in the stays into action and prevents them from bending, and when pressure is relieved the fence springs back into place again. The lateral wires are High-Carbon Hard Steel and coiled to provide for expansion and contraction by heat and cold, and are also crimped at the intersection of the stays and strands to prevent the stays from slipping sideways—therefore no locks Buy the Dillon Hinge-Stay Fence. It's "twice as strong." Twice as good an
