TOWNSHIP OF GLENELG

Voters' List, Part III, 1922, Municipality of Glenelg, County of Grey
Notice is hereby given that I have compiled with Section 10 of the Voters' Lists Act and that I have posted up at my office at Glenelg on the 11th day of April, 1923, the list of all persons entitled to vote in the said Municipality for Members of the Legislative Assembly only and that such List remains there for inspection.
And I hereby call upon all voters to take immediate proceedings to have any errors or omissions corrected according to law.
Dated at the Clerk's Office, R.R. 1, Durham, Ontario, this 11th day of April, 1923.
HECTOR H. McDONALD,
Clerk, Township of Glenelg.

NOTICE TO CREDITORS

In the matter of the estate of Frank Grasby, late of the Township of Egremont, in the County of Grey, Farmer, deceased.
Notice is hereby given pursuant to R.S.O. 1914, Chap. 121, Sec. 56, that all persons having claims against the estate of the said Frank Grasby, who died on or about the 23rd day of March, 1923, are requested to send by post prepaid or otherwise to deliver to A. B. Currey of the Town of Durham, Solicitor for the Executor, on or before the 30th of April, 1923, their names, addresses and descriptions of the claims and the nature of the security (if any) held by them duly certified, and that after the said day the Executor will proceed to distribute the assets of the Estate among the parties entitled thereto, having regard only to the claims of which he shall then have notice.
Dated at Durham, this 11th day of April, A.D. 1923.
David Bradshaw Jamieson,
Executor
by his Solicitor, A. B. Currey.

THE MARKING OF LAMBS

Benefits of System Clearly and Practically Told.

Australian Sheep Branding Fluid Recommended - A Numbering System Suggested - About Seed Corn - Pigs Profitable When Cared For.

(Contributed by Ontario Department of Agriculture, Toronto.)

The last few years the raising of sheep has been one of the most profitable branches of live stock farming, the amount of profit depending to a great extent on the success at lambing time and immediately afterwards. Difficulty is frequently experienced in giving the necessary care to individual lambs because they are not easily recognized. In a large flock many lambs look alike, and mothers frequently disown or fail to care properly for their own lambs.

Australian Sheep Branding Fluid Recommended.

In order that needy lambs may be easily recognized and their mothers found, a convenient system of marking is needed. For marking purposes Australian sheep branding fluid is best. It can be obtained in different colors from firms who handle sheep supplies, such as the Canadian Co-operative Wool Growers. This fluid does not injure the wool, and shows a distinct mark for several weeks, even when exposed to the weather. It may be applied with a small stick or, better still, an ordinary machine oiling can, and should be rubbed in so that it will not spread.

A Good System of Numbering Suggested.

In marking, a system of numbering is adopted. All male lambs are given an even number as 2, 4, 6, etc., all female lambs an odd number as 1, 3, 5, etc. The lamb's number is made on its back with fairly large figures, and the mother is also marked on the back with the same number as her lamb or lambs. If she has two lambs, a ewe number 5 and a ram number 8, she will have the figures 5 and 8 placed so that seen from behind one will be above the other or nearer the head than the other, to show 5 and 8 rather than 58. These numbers are best put on a few hours after the lambs are born.

Benefits of the System Described.

Some of the advantages of a system such as this have been found to be: One quickly gets to know the individual lambs by their numbers and their development is watched with interest; good mothers and poor mothers are known by their lambs and how they care for and feed them. This quality is often overlooked in sheep but is most important. For a ewe losing a single lamb a needy twin can easily be found to take its place and properly guarded until fully adopted. Lambs needing help for any reason are easily found and ewes recognized that can spare a feed for them. When two or more are in charge of the flock, it is an easy matter for the one to point out to the other what lambs need attention. By the adoption of this system of marking a complete "Record of Performance" at lambing time is easy to keep, and one will be better able to cull out the undesirable ewes and their offspring, if any, keeping only those that prove good breeders and good mothers.—C. W. Laidlaw, Demonstration Farm, New Liskeard.

About Seed Corn.

In districts where corn growing is an assured success the greatest cause of low yields is poor seed. This should not be so. The use of poor seed is unprofitable and causes the loss of large sums of money each year, not only in loss of crop, but in loss of labor and use of tools in tilling acres that have but a thin or less than 100 per cent. stand of crop. With corn planted, 42 x 42, there are 3,556 hills per acre if no losses occur through headlands. Using four seeds per hill, there would be 14,224 plants if all seed grew and developed strong plants. If each plant gave an eight-ounce ear, the yield would be 104 bushels per acre. If only one plant in each hill gave an eight-ounce ear, the yield would be 26 bushels per acre. Now the work and expense of interest on investment, fertilizing the land, ploughing, planting, and cultivating would be the same for a perfect stand as for a twenty-five per cent. or a thirty-three per cent. crop. Good seed is, therefore, the first insurance for a 100 per cent. stand in the corn field.—L. Stevenson.

Pigs Profitable When Cared For.

Swine are profitable when given abundant sunshine and exercise, fed on well-selected feeds, gently handled, given proper sanitation and housing, kept free from worms and lice, and protected against cholera and other diseases. Quite a lot can happen a pig between birth and old age, but it is an easy animal to keep in the straight and narrow path leading to successful and profitable development if you go the right way about it.
Pigs frequently suffer more from the heat of the sun during the summer than they do from the cold of the winter period. If possible, make full use of any available shade trees when making your plans for swine pastures, feed lots or colony house locations.—L. Stevenson.

Is farm life worth while? Not if it is one continual round of drudgery, 365 days in the year, without conveniences or any playtime. Nor, for that matter, is life carried on that way anywhere of much value. Conveniences, a garden, flowers, playtime, and some time given to neighbors, make life more worth while.

If farm operating equipment must be left outdoors for any length of time, it is a good idea to protect it from contact with the ground. Run it up on stones or boards.

Here and There

Nova Scotia has adopted the "drive to the right" rule of the road, the bill providing the change having received the assent of the administrator of the province.

The year 1922 was a banner year for Montreal in the number and tonnage of ships which came to the port, a total of 6,983 ships of 13,089,699 tons arriving, as compared with 5,541 ships of 9,735,450 tons in 1921.

Canada led the world in 1922 in the export of raw furs to the United States. The total fur catch for that year was over 4,069,000 pelts, valued at \$16,000,000. While the general price of furs shows a downward trend, the total catch shows a remarkable increase.

Four of the Canadian Pacific "Empress" liners, the Britain, the France, the Scotland and the India, are to load grain at Quebec during the 1923 season, and new berths have been provided for these vessels near the grain conveyors, at a cost of \$300,000.

When she was alighting from a street car in Vancouver, Mrs. Rose McLaren received injuries which prevented her from concentrating and temporarily did away with her earning power as a spiritualist or psychic reader. She was awarded \$1,250 against the railway company.

The addition of the 17,000-ton "Montclair" to the Canadian Pacific "Mono Class" fleet marks an important development. Not only is she the largest one-class-cabin ship sailing to and from Canadian ports, but she is the largest in her class on the Atlantic. Her length is 613 feet and breadth 68 feet. Because of her size she will sail to and from Quebec.

Approximately 8,000 tons of silver ore are waiting shipment from the Keno Hill, Yukon, mines. This quantity represents the winter haul. Another 2,000 tons may be moved this summer, making the total silver shipments ten thousand tons for 1923. Such an output is worth about \$2,000,000, high grade ore running from \$200 to \$300 per ton.

"The greatest feat of steam transportation to my knowledge," said C. E. Stockhill, of the Canadian Pacific Railway, recently, "was the movement of the grain crop of 1922." From Sept. 1 to Nov. 31, a period of 91 days, the Canadian Pacific Railway loaded and shipped an average of 1,265 cars per day. This requiring the dispatching of a train every 45 minutes during that entire period, carrying more than 1,000,000 bushels daily. This movement exceeded even that of the bumper crop year of 1915.

One of the many instances of the splendid work carried out at the Liverpool docks is afforded by the Canadian Pacific liner "Metagama." On a recent arrival at that port she started the discharge of her cargo and coaling at 6 o'clock in the morning. Allowing for the usual dinner hour, she took on board in her side bunkers 1,000 tons of coal, which was completed by 2.45 the same afternoon. At the same time she discharged 1,700 tons of cargo, the greater part of which consisted of package freight, completing this operation by 7.15 the same evening.

MANAGEMENT OF HOUSE PLANTS
(Experimental Farms Note.)

Windows opening to the South are usually preferable to those with Western outlook. During the winter days the latter will receive but little sun, and that too horizontal. Windows looking to the East may be occupied by a few plants and are, in fact, for palms, ferns and similar shade-loving sorts, desirable.

Where it is difficult to obtain a suitable compost an admixture of street-sweepings with fresh garden loam will answer; but if only a small amount of soil is needed it will be wiser to buy some prepared compost from a florist.

Pots used, unless new, should be soaked and scrubbed. Never use pots too large; a small plant growing in a great quantity of soil will not remove much water by transpiration.

For seedlings or rooted cuttings the pot is loosely filled with sifted soil, and the plant placed in a finger-hole made in the centre. The soil is then pressed into place and well watered.

Before re-potting, remove a quarter inch or so of surface soil, thus disposing of any weeds or slime. Next, place half an inch or an inch of compost in the bottom of a pot, put in a plant and add enough soil to fill the space. Then furnish a slight covering of fresh surface. The soil level should be from half an inch to an inch below the edge of the pot. The hole at the bottom must not be clogged; it is necessary to provide drainage. Pots up to four-inch need not have the hole shielded. Above this size, an inch or two of broken pot might be placed in the bottom and covered with sphagnum or rough sod, to keep the soil from washing down and filling the spaces.

Through lack of food a plant sometimes does not make good growth. So long as the roots have not become bound it need not be re-potted; indeed, this would offer a needless check. Scrape away the surface soil down to the roots and replace by a rich soil containing twenty-five per cent. of ground bone.

Provided the plants have proper drainage water should be applied until it runs through the bottom. Too frequent watering is often a cause of non-success; it wets the surface soil so much as to keep the air out. The soil becomes sour and the water does not penetrate to the roots of the plant—the only place where it will do good.

Dwelling air is usually dry—a condition inviting to the red spider. Dryness may be decreased by evaporating water in the room and by syringing foliage on bright days. Thickly-leaved plants may be sponged off with water containing whale-oil soap. Also, give a little ventilation on pleasant days.

At night plants do best in a temperature 40 or 45 degrees lower than they need during the day. Most species used in the house require no more than 50 degrees or 55 degrees F. at night, and they will not suffer if the thermometer falls to 40 degrees—though such a temperature maintained for a good while would check growth.

Frozen plants should be thawed out slowly. Remove from direct sun-rays and keep at a temperature of 35 to 40 degrees until thawed. If cold water is used the temperature must not rise above this. Water at 50 or 60 degrees will probably harm plants more than if they are allowed to thaw themselves out.

Fitness of plants for house purposes may be largely determined from structure and general appearance. Those with thick leaves and a small, glossy surface, are but little affected by a dry temperature, while plants with small, thin leaves, quickly dry up.

Oscilliduous plants that show bare stems in winter are the least decorative. All plants need rest, but those which rest during the summer should be chosen: begonias, abutilons, callas, cyclamen, genaniums, heliotrope and Chinese primroses; also the flowering bulbs—hyacinths, tulips, narcissi, etc.

SPRING BOILS
"Every Spring, for three successive years," says Mr. Ernest Hill, of Havelock R.R. No. 1, Ont., "I was the victim of Boils. Though I had those inflamed growths lanced I never got rid until I used Zam-Buk. This herbal balm purified and healed in a wonderful way. There has never been any return of the old trouble."

Also for eczema, pimples, abscesses, ulceration, blood-poison, piles, scalp sores, cuts, burns, scalds, etc. Zam-Buk is the soothing, speedy, powerful remedy. Never be without a box of Zam-Buk. Purely herbal. 50c. All druggists and dealers.

ALL FIELD SEEDS TO BE OFFICIALLY GRADED

The Seed Control Act, administered by the Department of Agriculture at Ottawa, is undergoing amendment at the present session of Parliament. The amending Bill, after receiving the approval of the Agricultural Committee, has had its second reading in the House of Commons. The original Act provides for the compulsory grading only of timothy, alsike, red clover and alfalfa. The grades of these seeds recognized are: Extra No. 1, No. 1, No. 2, No. 3 and Rejected. The amended Act will extend compulsory grading to all kinds of grass and clover seed, flax, sorghum, millet, wheat, oats, barley, rye, corn, buckwheat, sunflower, field peas, field beans, and vetches. Provision is made for including seeds of other kinds of farm crops. The bill also provides for the optional grading for commerce of field roots and garden vegetable seeds. Farmers selling seed on their own premises will not be required to grade seed grain. Grass seed and clover seed, however, sold from the farm, must have been officially tested and graded on the basis of a control sample.

That knocker who says college graduates are too mouthy probably thinks B. A. means Bull Artists.
