NOTICE TO CREDITORS

In the matter of the estate of Jane Ryan, late of the Town of Durham in the County of Grey, Widow, deceased. Notice is hereby given pursuant to section 56 of the Trustees Act, R.S.O. 1914, Chap. 121, that all creditors and others having claims or demands against the estate of the said Jane Ryan, who died on or about the 27th day of June, 1923, at the Town of Durham are required on or before the 15th day of August, 1923, to send by post prepaid, or deliver to the Solicitor for the Executor of the last Will and Testament of the said deceased, their Christian names or surnames, addresses and descriptions, the full particulars in writing of their claims, a statement of their accounts and the nature of the security, if any, held by them.

And take notice that after such last mentioned date the said executor will proceed to distribute the assets of the said deceased among the parties entitled thereto, having regard only to the claims of which he shall then have notice, and that the said executor will not be liable for the said assets or any part thereof to any person or persons of whose claim notice shall not have been received by him at the time of such distribution. Dated at Durham this 19th day of July, A.D. 1923. A. B. CURREY, Solicitor for the said Executor 7263

TENDERS WANTED

Sealed Tenders will be received by the undersigned up to and including August 4, 1923, for the construction of a reinforced concrete bridge on the Townline between Normanby and Bentinck Townships, Lot 4, Con. 1, W.G.R. Approximate yardage 57 cubic yards. Tenders must be accompanied by Marked Cheque made payable to the Treasurer of the County of Grey, for five per cent (5%) of the amount of the tender. The lowest or any tender not necessarily accepted. Plans and specifications may be seen at the office of the Engineer at Owen Sound, or at the home of H. W. Hunt, Reeve of Bentinck, on Durham-Hanover Road. G. A. Bothwell Chairman Road and Bridge Committee, Grey County. R. C. McKnight, County Engineer.

Give the dairy cows access to water at all times. If the source of water in the pasture lot is a stream, precaution should be taken to see that it is not converted into a mud puddle by the cows standing in the water. It is better to have the water in a clean tank.

ROUP AND CHICKEN POX

These Contagious Diseases of Poultry May Be Cured.

Prompt Treatment Will Save the Birds—Can be Cured in Ten to Twenty Days—Not Communicable to Men or Other Animals.

(Contributed by Ontario Department of Agriculture, Toronto.)

In the last few years the treatment of disease among poultry has received much study and many of the older ideas have been revised. Birds respond well to proper medicinal and hygienic treatment; in fact in many cases they show remarkable powers of reserve and resistance, thus comparing very favorably with other domesticated animals. The idea that it is useless to try and treat a sick fowl is erroneous.

Last winter the Ontario Veterinary College carried out a number of experiments regarding the treatment and cure of roup. These tests established the fact that in many cases the disease could be controlled and the birds returned to usefulness in from 10 to 20 days.

Roup is a contagious disease that attacks the mouth, nasal passages, and eyes of fowl. The causative agent or germ has not yet been certainly demonstrated. The disease spreads rapidly through the flock, being favored by damp, cold, dark quarters, and for this reason roup is most prevalent during the winter months. The lesions in the mouth take the form of masses of yellow cheesy material which has a characteristic offensive odor. The nasal chambers and nostrils become plugged with exudates so that the bird is forced to breathe through the mouth, hence the bill remains open and breathing is often difficult. The eyes become inflamed and filled with a liquid discharge which later becomes thick and cheesy and completely fills the eye cavity. Often the whole side of the head is swollen and when both eyes are involved the bird is blind.

Treatment of the Disease. The sick birds must be removed from the flock and placed in dry, light and moderately warm quarters. It is useless to try and carry out any treatment unless this is done. Give opening medicine such as Epsom salts dissolved in the drinking water, about a quarter of a pound for every twenty-five birds; give for one day and repeat in a week. Catch each bird and proceed as follows: Remove all cheesy material from mouth and throat using a small pair of forceps or tweezers, scrape the sore places well. Don't be afraid of a little blood, but be sure and get down to healthy tissue. Dress mouth with a three per cent. solution of iodine; swab out well. If bird swallows a little of the solution it will do no harm. The nasal lesions should be treated by injecting a warm solution of boric acid, about one teaspoonful to a teacup of water. Use a small syringe to force solution up nostrils. The eyes should be treated with the boric acid solution. Wash out the eyes well and open up the lids if they are stuck together. Sometimes the whole eye cavity is filled with a thick cheesy material; remove this by pressure and the aid of the forceps. In severe eye cases a few drops of iodine solution may be used without ill effects. These eye lesions are often difficult to treat.

The above treatment is somewhat drastic and will take a little time, say three minutes for each bird, but if followed out faithfully and given a trial in suitable quarters it will be found to clear up most cases of roup, in two or three treatments which should be given every other day. It has been found that the average case of roup will clear up in about ten days and that soon thereafter the birds will commence laying again. Birds that have recovered from roup do not take the disease again.

Chicken Pox May Develop.

Another condition which may appear along with roup, or as an independent disease, is the so called chicken pox, in which scabs and sores form on the wattles, combs and eye lids. The lesions are often about the size of a five cent piece and commence as small light raised areas that exude a thin discharge and soon become converted into crust like scabs. This condition is quite contagious and requires prompt treatment to control. Catch the bird, and with a small rather dull knife scrape off the lesions until healthy tissue is reached. Don't be afraid of blood. Scrape well, then dress with iodine solution rubbed in well over entire head and wattles. Three or four treatments every other day will clear up most cases. Give birds opening medicine and remove from flock during treatment. Birds that recover from chicken pox are immune from further attacks. It is most essential to remove any ailing birds from the flock and it should be remembered that the discharges from the lesions carry infection so that all soiled litter and dead birds should be burnt. These Diseases Spread by Contact.

Roup and chicken pox spread from bird to bird by actual contact. Often the first case is introduced into a flock by the purchase of birds from infected premises or by handling of birds by a person who has recently been in contact with affected birds, or on the shoes or clothing. The best way to prevent roup is to preserve cleanliness in poultry runs and houses; to watch the flock carefully and at once remove and treat sick birds. It is advisable that the person who treats the sick fowls should recognize that he is dealing with a very contagious disease and should change outer clothing, clean boots and wash hands thoroughly before going among the flock, especially young chicks. Neither roup or chicken pox are communicable to man or any other animal.

Here and There

Various species were expected by the marketing branch of the Department of Fisheries and Forestry, August 1, 1923.

Inbound ships from the United Kingdom are averaging 4,500 tons of freight per steamer at Vancouver. Outbound they take about 4,000 tons per vessel. Last year the average outward tonnage was practically the same while the inbound was only about one tenth of what it now is.

Announcement has been made that a Government wireless station is to be erected on St. Paul's Island, which stands in the entrance to the Gulf of St. Lawrence, off the most north-easterly point of Nova Scotia. Two Government wireless engineers have arrived there and are making arrangements for the erection of the station.

One hundred and forty thousand Canadian school boys have been bandied into an army of guards to watch for and prevent forest fires in the Dominion this year, according to an announcement made by the Canadian Forestry Association. The new organization, which is known as the Young Canadians' Forest League, will, it is expected, save several million dollars' worth of timber from fire ravages.

That "prospects for increased immigration into Canada are excellent" was one of the most important statements made by E. W. Beatty, M.C., upon his return from an extended tour of England and European capitals. The president of the Canadian Pacific Railway believes Canada is progressing in the matter of immigration, but intensified efforts are essential, he considers, to offset erroneous impressions abroad that Canada does not require new settlers.

A record run between Winnipeg and Quebec was recently made by a special Canadian Pacific train when passengers from the Orient were, through delay caused by landslide, in danger of missing their connection with the C.P.S.S. "Empress of Scotland" at the eastern port. The train covered the 1,579 miles in a little over 36 hours, whereas the schedule time for trains between these two cities is 53 hours. The passengers had crossed the Pacific on the C.P.S.S. "Empress of Russia" and were taking advantage of the 21 day Orient-to-Europe service of the Company.

The United States has invested in Canada \$2,500,000,000, according to the Bankers' Trust Company of New York, which has just completed a survey of Canadian industry and the amount of United States capital invested. Of the total sum invested, \$1,200,000,000 is in bonds, and the remainder in farms, mortgages, small businesses, industrial enterprises, banking and private loans. It is computed that more than 200 branch factories were opened in Canada by United States concerns in 1919, and a great number in 1920 and 1921, and that late in 1922 the number of these came to 700.

A collie dog is reported to have saved the life of a London West girl, while accompanying the child to a nearby store. On the way she stopped on the C. P. R. railroad tracks in the path of a west-bound train. Realizing the child's peril, the dog threw himself against her with sufficient impact to knock her clear of danger, and was cut to pieces by the train before he could regain safety.

The girl's mother tried to discourage the dog from going when the daughter started for the store, but he went, and was the means of saving the child's life and died heroically as a result.

SIX MONTHS FOR BURGLARY

John Miller, a Collingwood young man, with a wife and family, was arrested for breaking into the house of Rev. Mr. Silverlight of Duntroon and stealing \$35.00 and other articles. Mr. Silverlight is the Anglican rector and had been formerly rector at Chatsworth. Miller was tried at Barrie by Magistrate Jeffs and pleaded guilty. He got six months at Barwash.

NAIL EMBEDDED IN WOOD

DULLED BRUCE SAWYER'S SAW
Evidently William McDonald, the editor of The Chesley Enterprise imagines that the whole darn universe keeps turning around that hub of Bruce County called Chesley. And any time he refers to anything over in this neck of the woods he thinks it is in Bentinck. If we thought it would do him any good we would send him over one of those new U. F. O. Geographies, but as these give Moncton, N.B. as the "headquarters" of the Canadian National Railways, they are about as much off their course as the Bruce County People's William, Glenroadin in Bentinck! This is what he says in last week's issue:

"On Thursday George Durst showed us a wrought-iron nail in a piece of maple lumber that had come in contact with a saw in the Bruce woodworker's plant, resulting in the saw being considerably damaged. The lumber came from John Durst's mill at Glenroadin in East Bentinck and judging by the grain of the timber had been driven into a maple tree by some enterprising Bentinck farmer to attach his clothes line to, about three decades ago. Mr. Durst informs us that when he was in the employ of the McLagan Manufacturing Company of Stratford the factory saws often came in contact with bullets in the walnut and mahogany lumber from Old Virginia. The bullets had been lodged there since the fratricidal war which closed in 1865. The bullets didn't affect the value of the expensive woods and were better there than in the holes of Union or Confederate soldiers. Only too many bullets found their bullets."

For his edification we might explain that Glenroadin is in Glenelg, the municipality over which Mr. Archie McQuig is the mayor. It may be possible, however, that the new geographies have described it as being in Bentinck. Mr. McDonald will be let off this time on suspended sentence this time.

MOTORED TO OWEN SOUND FROM WESTERN CANADA

Mr. and Mrs. Daniel Tolton of Winnipeg, accompanied by Mrs. Tolton's brother, Mr. Smith, have arrived at Owen Sound, coming all the way by motor. They crossed the border at Emerson, Manitoba, into Dakota, thence by way of Milwaukee, Minneapolis, St. Paul, Chicago, Detroit, Windsor, Goderich and Southampton to Allenford, where they visited their brother, Mr. Emerson Tolton, and on to Owen Sound where they are at present visiting Mr. and Mrs. James McNeil, 6th

TO EXPECTANT MOTHERS

A Letter from Mrs. Smith Tells How Lydia E. Pinkham's Vegetable Compound Helped Her

Trenton, Ont.—"I am writing to you in regard to Lydia E. Pinkham's Vegetable Compound. I would not be without it. I have taken it before each of my children was born and afterwards, and find it a great help. Before my first baby was born I had shortness of breath and ringing in my ears. I felt as if I would never pull through. One day a friend of my husband told him what the Vegetable Compound had done for his wife and advised him to take a bottle home for me. After the fourth bottle I was a different woman. I have four children now, and I always find the Vegetable Compound a great help as it seems to make confinement easier. I recommend it to my friends."—Mrs. FRED H. SMITH, John St., Trenton, Ont.

Lydia E. Pinkham's Vegetable Compound is an excellent medicine for expectant mothers, and should be taken during the entire period. It has a general effect to strengthen and tone up the entire system, so that it may work in every respect effectually as nature intended. Thousands of women testify to this fact.

As you will see, the remarkable results I have made the entire trip without a mishap of any kind, not to mention the pure enjoyment. They started going on to Merford, where they will visit with friends, and expect to attend the one and half day course returning to the West, Monday.

It is a great pleasure to see some benefit when I am in your bathing suit, and pulling weeds in the back yard.

Durham High School

The School is thoroughly equipped to take up the following courses: (1) Junior Matriculation. (2) Entrance to Normal School. Each member of the Staff is a University Graduate and experienced Teacher. Intending pupils should prepare to enter at beginning of term. Information as to Courses may be obtained from the Principal. The School has a creditable record in the past which it hopes to maintain in the future. Durham is an attractive and healthy town and good accommodation can be obtained at reasonable rates. C. H. DANARD, B. A., Principal. C. L. GRANT, Chairman.

A MILLION DOLLAR BABY
Naturally, those who see this heading expect to read about some "baby heir" of an American multi-millionaire, and they will be surprised to learn that such a description applies to a scientific pyorrhea preventative, tooth and mouth preparation, and they will doubtless wonder how such a product ever came to be spoken of as a "million dollar baby." So the story must be told. Over three years ago, the Research Department of the Rexall Company, in consultation with chemical specialists, began an exhaustive investigation into the disease Pyorrhea, and its proper treatment, and in their characteristic thorough way spent over two years before they perfected a compound which answered every test, according to their high standards. Such a remarkable demand has been created that they have named it "the Million Dollar Baby." Probably no preparation that is devised for use as a germ combatter was found so efficacious in preventing all contagious diseases that enter the system through the mouth and nose as Klezno Liquid Antiseptic. Especially was it proved that users of it completely escaped all attacks of the flu when so prevalent last year. PRICE 35c.
