NECESSITY OF PURE STOCK WATER.

Few farmers and stockmen are as careful to supply the various wants of their stock as they should be. They think if they furnish their animals enough to eat at all seasons of the little thinking that a regular and generous supply of pure water is fully as necessary as feed itseif. Water forms weight of the body and enters into the composition of every bone, muscle and tissue. Food can only be assimilated when in a soluble state, hence water is an indispensable aid to digestion.

Where it is available, running water, either springs or creeks, is preis pure and needs no pumping. Unless sewerage, creek water is good quality, as it is being continually aerated and purified by exposure to the sunshine. For domestic use, a spring or deep well is the best source of pure water. The ing the subterranean streams the more thorough the filteration. A tubular wfil is much safer and a more reliable The bill by Mr. Richardson to at- source of supply than a dug well, pools or vaults perfectly water-tight, to prevent the surrounding surface
