ADVICE TO FACTORY MEN.

DONT MAKE FODDER CHEESE.

We have received for publication from the Montreal Butter and Cheese Association a circular addressed to Factorymen, the gist of which is contained in our heading. It is rather too lengthy to reproduce this week, but the extracts will give the important parts:

"We desire to draw the serious attention of Canadian Dairy men to the undesirability of manufacturing in Canada any cheese at all from fodder milk, either at the beginning or the end of the seasons, believing this to be in the interests of all classes, from the farmer to the exporter, connected with the manufacture of full grass cheese.

The experience of recent years proves that the average world's production of full grass cheese, which is sold on the English markets, consisting chiefly of Canadian, States and New Zealand makes, besides the English home make is as large as can be consumed in one season at profitable prices. Take for instance the present season. The total shipments from Canada and the States from the 1st May, 1900, to the end of January, 1901, have amounted to about 2,000,000 boxes, while the English loss is estimated to be some 15 per cent larger than that of the previous season. This large production has left a stock of Canadian and American cheese on hand at this date which it will take four months full average consumption to clear off. If in addition to this large stock a large quantity of fodder cheese should be made from new milk this coming spring, it is easily seen that the result will inevitably be a large surplus of old cheese left over on the English markets in June, which will certainly have the effect of retarding the sale and seriously lower the price of new grass goods this coming season. For these reasons it seems to be only the part of wisdom of Canadian producers, who contribute the largest quantity of foreign cheese to the English markets, and whose produce at present stands highest in reputation there, to submit even to some immediate temporary loss on their fodder milk rather than make any fodder cheese at all, either at the beginning or end of the seasons, as they will assuredly reap a substantial advantage in the higher prices and increased reputation they will afterwards obtain for their full grass goods.

In advocating this policy this Association does not forget the difficulty the farmer is faced with in disposing of his stable fed milk. It would be better, if necessary, to throw this class of milk away rather than manufacture it into cheese; but such a sacrifice is not necessary. While it seems impossible to manufacture a first-class article of cheese from stable fed milk, it has been proved that by scrupulous cleanliness and scientific methods a very fine article of butter can be made from this milk, for which there is always a good demand from domestic sources and considerable demand for export, at good prices.

This Association, therefore, strongly recommends the factorymen as far as possible to provide themselves with alternative machinery for making both butter and cheese, and where it is not possible for the farmer to work up his fodder milk into butter, it is strongly recommended that he should put it into stock. There is a substantial profit to the farm in feeding to the stock the skim milk from the creamery, or even the full milk where necessary, in the consequent enrichment of the soil, besides the price obtainable from the stock itself."

MULL CORNERS.

Hopeville.

The Proton Council held a meeting on 10th at Dundalk, and we see by the minutes that \$27 was voted to Lawyer MacKay as fees for advice to them in the Patrick Ryan case. They put it in the motion that the Owen Sound Sun was compelled to withdraw charges of any reflection on the Proton Council. They also put a rider to their motion that they had to have school advice from Mr McKay. We have not heard as to what advice the Proton Council got, only a report that some of the council wanted to know how many hours a teacher should teach in a day. If this is true, that fee might be saved if the Reeyes had come to Hopeville and asked the smallest school child he could get the desired information.

Died on Saturday 10th in Egremont, near Proton townline Mr. John Watson aged 80 and was buried 18th in Egremont. Mr. Watson was an old resident in the neighborhood. He was married twice and leaves a large family.

The weather has been very cold here lately.
