How To Gain Flesh

Persons have been known to gain a pound a day by taking an ounce of SCOTT'S EMUL-SION. It is strange, but it often

Somehow the ounce produces the pound; it seems to start the digestive machinery going properly, so that the patient is able to digest and absorb his ordinary food, which he could not do before, and that is the way the gain is made.

A certain amount of flesh is necessary for health; if you have not got it you can get it by taking

You will find it just as useful in summer as in winter, and if you are thriving upon tt don't stop because the weather is warm.

ROPINESS IN MILK.

The slimy, viscid condition of milk has been a source of perplexity and abhorrence to all dairymen and milk dealers at one time or another. It is quite commonly supposed to be always due to a diseased state of the udder, known as "garget;" but we are told in the last farmers' bulletin from the Cornell experiment station that this is a "mistaken belief." There is "ropy milk" that is due to garget and may always be known by its yielding on standing a what the milkman knows as "ropy tells us that this kind of ropy milk ets at very low rates from Chias bacillus lactis viscosus. They live naturally in water, and preventive measures are most important. Some are these: Wash and scald the milk utensils after use. Merely rinsing them will not

Bacteria may be introduced by that very act. Keep the cows' udders clean. The floors of all rooms where ropy milk is kept should be disinfected with a mixture of five parts of crude sulphuric acid to 95 parts of water. All milk utensils should be scalded most thoroughly daily. Never let cold water come in contact with utensils unless they are scalded before using for milk again. Exercise the greatest care to prevent even a drop of water from the cooling tank getting into the milk. That occurrence is probably the most common cause of What a man wants to do with a trouble from ropy milk. If water must be spattered about, the cans solely and wholly to tone up and and let her love him in the same standing in ice water should be cov- strengthen the generative organs. You can fool a woman into think- scalding, should stand upside down of the experience of a successful phying she is fooling you, but you can't to prevent the accumulation of dust sician and specialist in female trou-

> Cover Crops and Fertilizers. Prof. I. P. Roberts, of Cornell University, says: Cover crops may in a measure take the place of fertilizers and manures. They are not however, a universal panacea for all soil deficiencies, neither are they a full substitute in all cases for fertilizers. There is always a wide field

for the profitable use of one or all on the concentrated forms of fertilizers named, and in many cases there is also a special place for the use of fertilizers, therefore the more need of honest goods. Commercial fertilizers furnish available plant food, but no humus. The cover crop furnishes | you-what for ?" both, but it is only fair to say that the plant foods in the former are more available than in the latter. Cover crops improve the physical condition of the soil little or none. The humus furnished by the cover crops increases the availability of Eyes and lips, sweet hands and the plant food already in the soil; fertilizers do not. Cover crops shade

the land and conserve moisture. It is impossible to accurately compare the cost of fertilizers with the cost of seeds for the cover crops, and the preparation of the soil for them. The cost of increasing productively by extra tillage, by the use of fertilizers, by cover crops or by all three means, can only be determined in each case by the farmer interested. I give below a single illustration of what a cover crop concond grow % of clover, furnished in roots and tops per acre, the following : Nitrogen, 138.86 lbs. ; phosphoric

acid, 67.35 lbs.; potash, 109.90 lbs. There is removed by 25 bush. wheat and accompanying straw, nitrogen, 43 lbs.; phospheric acid, 20 lbs., and potash 27 lbs. It is believed that to be handed in the next morning. most of the nitrogen taken up by legumes is secured from the uncombined nitrogen in the atmosphere. to how he should go about his task, The clover did not add to either the and was told to just write his To prove to you that Dr. store of phospheric acid or potash. The plant took them from the soil heard, or had seen or heard. This and made them available. F. W. Hodson, Live Stock Commissioner.

TESTS OF SEEDS.

Experimental Union Programme for the Coming Season.

The Ontario Agricultural and Experimental Union is prepared to distribute for experimental purposes good seed of leading varieties of farm crops to an average of sixty-five farmers in each county and district of Ontario. Each person who wishes to conduct an experiment and is will- It grew there and it grew there, ing to use great care and accuracy in the work and report the results of the test directly after harvest It grew and it grew, should select the exact experiment desired and apply for the same as soon as possible. The material will be forwarded in the order in which the applications are received until the limited supply is exhausted. Although material for not more than one experiment will be sent to each percines has depended entirely on large | son, it might be well for each applicant to make a second choice for fear

******** LONGFELLOW'S FIRST POEM.

***** year. When Henry W. Longfellow, the great American poet, was a little boy of 10 or 12 years, attending the district school near his home in Portland, Me., his teacher requested him one day to write a composition Very much disturbed in mind, young Henry sought a little information as thoughts upon anything he saw or

was not of very much assistance, so he went dolefully home, and as no inspiration seemed to come on the way he retired to the barn to meditate. Whie sitting there a turnip growing just over the fence in the garder of his father's next door neighbor, Mr. Finney, struck his fancy, and proved to be the inspir-

ation he was looking for. The next morning Master Henry handed in the following composition to his teacher:

Mr. Finney had a turnip And it grew behind the barn ; And the turnip did no harm.

Till it could not get no taller, Mr. Finney pulled it up And put it in his cellar.

It lay there and it lay there, Till it began to rot. His daughter Sally took it up, And put it in the pot.

She boiled it and she boiled it, As long as she was able, His daughter Peggy fished it out And put it on the table.

Mr. Finney and his wife They sat down to sup. and they ate, and they ate, Till they ate the turnip up.
