SHODDY IN BRITISH AND AMERICAN WOOLLENS More

By Alfred Mansell, Shrewsbury.

The article "Why is Wool so Cheap?" previously alluded to, further states that shoddy is the great feature in the trade of one of the leading towns of the Heavy Woollen District of Yorkshire, and it is well known that the mills do turn out an enormous weight of goods, the material being composed mostly of shoddy, cotton and the like. (broad width), is the price of these so called woollen goods, and plenty of attractive tabrics are made at less.

It is also stated that Scotch manufacturers of tweeds who hitherto used no shoddy, have had to resort to its use in order to compete with the composition of similar articles largely composed of shoddy produced in several Yorkshire towns and elsewhere.

The manufacture of artificial woolsand it is somewhat difficult to understand the designation-is said to be a real article.

town in the Heavy Woollen district, the Yorkshire Observer says it is noted for its classical cloths, cheap dress meltons, dyed in classical shades, Greece and the Levantine ports. all goes well there is a great future for these goods. The twills and serges produced here are in great favor with wholesale clothiers, and combined with an export demand, a steady trade results the whole year round.. Into the composition of the higher grades a percentage of wool enters, but it is small. The cheap costumes which adorn the windows of many mantle shops are made in this locality. Tweeds and mantle cloths from 1s. 3d. per yd. from another important branch, and are made largely throughout this neighborhood. Speaking of military and police clothes, "strength being the test", there is little room for mungo

A well-known Yorkshire firm replying to an enquiry on the subject states, -"There is so much mixing done Table Oil Cloth, 45 in. wide 25c. a yd. | now-a days to bring goods in at such low prices, that it takes a very good man to tell what there is in some of the manufactured articles.

In the Yorkshire Post's annual trade review of December 7th, 1901, a 54 in. Don't forget the Big 4, when you cloth is spoken of which sells at 1s. 1d. want a new pair of Shoes for the spring. per yd. which is composed of all Salada Ceylon Tea, Black, or mixed shoddy, but is classed as woollen goods.

The Hon. Geo. W. Wallace, Sante Fe, New Mexico, in an able article on Substitutes for Wool", recites statement by a commission house in the trade that 90 per cent of woollen goods contain cotton, and that in 45 per cent the proportion of cotton is 3; and. when in addition to this cotton, the stuff which masquerades under a score of aliases, such as shoddy, mungo, wastes, flocks, loon flyings, wool extracts, noils, wool stock, manufactured wool jute yarn, &c., the wonder is not that the sales of wool fall off so largely, but that any wool is used at

I thoroughly agree with his deduction, and also in his statement that the adulterated cloth has neither the wear or the warmth of honest woollen goods. Mr. Wallace continues by stating that an expert witness before the Ways and Means Committee of the Fifty-fourth Congress, testified that the first class large worsted mills of the United States had put in the French and German process by which short-woolfibres could be used. This is a fact which speaks for itself. Quoting further from the same source, an English correspondent of an American paper writes :- " I give designs and particulars for two most excellent cloths. The worsted panting will make a cloth particularly adapted to the American taste, and it can be made very well on a cotton backed cloth and mungo filling." Again a trade journal in a technical article says:-"The proper finishing of low-grade face goods requires great skill and care, as generally such goods contain large percentage of cotton in both warp and filling, the amount of wool

cover the cotton, and it is seldom of the best quality. Quoting Mr. Mulhaser, the greatest manufacturer of shoddies in the United States, Mr. Wallace gives the annual consumption of shoddy in the United States at 40 million pounds, displacing 120 million pounds of wool. The National Live Stock Association of America puts the figures for 1900 as follows :- (and this I presume refers to the U. S. only)-Shoddy used in 1900-74 million pounds displacing 222 million pounds of wool, or equal to 72 per cent of all the wool in the United States that year. In other words it displaced wool equal quantity to that clipped from 42,990,000 out of the 61,415,000 sheep owned in the United States. Therefore but for this

being only sufficient to form a face to

222 million more pounds of wool. An instance is given of the discovery | to tell outside our township fathers. by accident of the fact that a most | The council held the tenth meeting reputable (?) and well known manu- for this year last Saturday. They got facturer, who had a contract to supply | through before dark. Thos McAuley the Government with 50,000 army was appointed tax collector. There is blankets, was found to be stuffing the same with shoddy to the extent of 50 per cent. Cotton is also introduced of two lawsuits against the council, one by Constable Pearce of attended. We extend our sympathetic over Sound for damage to a horse feeling to Mr Ferguson and family in their into blankets made in England, and said to be hurt on the road and one by in some cases, exceeds even 50 per the Mills family for undermining their fuller accounts of the death of this estim-

shoddy in the United States is shown by the tollowing figures:-In 1860 thirty establishments had an ann al output of a value of \$400,000; In 1890 the census showed ninety four stablishments and a products valued at \$9-208,011.
