The marquis shook his head slightly. "I'm afraid we shall be off to-morrow," he said.

"To-morrow!" exclaimed May, nervously. "So soon? Well, you mustn't go without seeing our pet view. 'You'll have to go up that slope to where an old wooden seat--" "Yes, I know it," he said.

(To be Continued.)

The Vermiform Must Go. At the meeting of the State Medical Society of Pennsylvania at York a few days ago papers dealing with appendicitis, were read by Dr. John B. Deaver, of Philadelphia, and Dr. Richard Henry Gibbons, of Scranton, both prominent surgeons. Dr. Deaver said that he had during the past year operated in 560 cases of appendicitis, which indicates that the disease is as fashionable as ever. The strange part of the doctor's statement, however, was that only 5 per cent. of these 560 cases had terminated fatally, and they, declared, would not have resulted thus if they had not been neglected. The thing to do, according to Dr. Deaver, is to have the vermiform appendix snipped out the minute it begins to be troublesome. "I advocate instant operation," he explained, "and I never cut so that a

stitch is necessary.' Dr. Gibbons is even more relentless than Dr. Deaver in his opposition to the appendix. He was always known, he said, as a physician who was "always cutting out the appendix," and he always advocated the removal of all appendices, whether they were supposed to be diseased or not Removing a healthy vermiform appendix, he declared, was no more dangerous than having one's hair cut, and with the "infernal member," as he called it, gone, there would be a serious danger out of the way. forever. He admitted that he cut out
