WHAT HER FOGS COST LONDON.

Fog is London's greatest curse. No one knows it better than those forced to live and work in the great city, and few are they who have not to complain that the annual visit of the fog fiends incurs for them a loss, if not in time or hard cash, at least in health and spirits. But fewer still are those who have any idea what fog costs in yellow gold yearly, for its influence is farreaching in its attacks on the publicp ocket.

Without fog, but for this most terrible of national seourges, London would be better off to the extent of 2 1-2 million sterling every year. That is the total of London's annual fog bill, as near as it can be reckoned, for no monetary value can be placed upon the lives extinguished ere they should be by it, upon the great loss of time and demoralization of business it causes, upon accidents in streets and on railways arising from it.

When the fog rolls down, that thick pea-soup cloud, as dense as smoke, the asthmatical being gasps and dies. Vital statistics prove it; deaths from respiiratory diseases are in the fog season always far more numerous than at other times. During one foggy season, a few years since, 10,960 persons died in London, of whom 3,840 died from respiratory diseases.

When the fog fiend reigns, our railway systems are demoralized, trains can but crawl, and are hours late, the evening dress for a pretty woman time of men who should be at business or girl. is wasted, and business is at a standstill. Then railway companies must spend thousands of pounds in fog signals. Equally the traffic of the streets is interfered with, incurring further loss of precious time.

estimated in pounds, shillings and Marquis de Cars, a son of one of the pence. Could they, they would no illustrious families of the Faubourg doubt be found to run into hundreds of Saint Germain. The bride looked mag-

drift into London. The fog may be light | effectively util zed to drap; the shou fog, but the smoke from 2 1-2 million | ders and the sleeves, on which a band chimneys, leading from fires whose of rienest sable fur was set on in brewinter consumption is 5,000,000 tons of | telle effect. A trio of palest pink coal, rapidly mingles with it, and produces the well known "pea-souper."

London is responsible for the terribleness of its fogs, and London alone, because household grates are constructed on the best lines to benefit coal merchants, and householders will not use steam coal. If fire grates were constructed on a sensible plan, or the German style of stove adopted, and if fires were fed at the bottom instead of at The mother of the oride, Mrs. Edthe top, the evil would in a large measure be remedied.

the room, instead of flitting up the green velvet, lace and sable trimming chimney; less coal would be used, and her Louis. XVI. coat costume. The "Dog Wagon" in London. London by night is shortly to have a unique attraction in the shape of an elegant travelling restaurant, which will perambulate the streets for the benefit of those who desire refreshment better than that provided at the ordinary coffee stall.

The travelling restaurant consists of a lavishly ornamented van, some twenty feet long by six in width, with a doorway at the side, to which the customer ascends from the street by a mlaiature flight of steps, Colored glass panels bearing allegorical designs form the windows round the sides, and the back of the car bears in large letters the announcement, "Night Lunch," which gives sufficient indication of the American origin of the new departure .- London Daily Mail.

minard's Limment Cures Colds, etc.

CROSS-OVER PRINCESSE.

With the Princesse dress the reigning favorite among elaborate dresses, and especially among evening dresses, it is interesting to consider its most notable feature. This feature is the cross-over

Cross-over backs must not be attempted by the "prentice han'," One can imagine no elaboration that would be more painful if bungled. They belong in the drapery class, though no fulness is wasted. For a bride there could be no more magnificent model, providing that the bride be blessed with a perfect figure. For velvet dresses (the soft chiffon velvet weave) there is no more stately model, and while the princesse serves most frequently in evening dress, it is equally correct for all handsome afternoon and reception dresses. This particular one is of lvory satin panne crepe, a Fahrenheit.-Engineering Magazine. very heavy weave. Its exceeding gracefulness is due also to the arrangement of the deco'latage, which is a flat puff of repousse lace. Because of this the dress proper is very low, reaching little higher than the average princesse skirt. Instead of simply hooking down the back (and, alas! showing the books only too often) this novel dress is hooked only as to the lining, which is of a splendid quality of taffeta, too painful display of the fact that Then the backs curve downward, there are no depths to which it will one lapping over the other in grad- not sink.

uated effect, until at the waistline the side that laps over is more than an inch to one side. This brings it to the side back seam, which makes it the most natural thing in the world to continue the graceful back in a spreading box-plait effect. Long wisps of tulle (of the angel sleeve order) supplement the abbreviated sleeves, which are fluffs

COMBINATIONS.

Black and white are classic. Orange is good on brown. Emerald is smart with black. Gold is lovely on white. Old gold is rich with deep green.

Apple green is charming on brown. Coral forms a clever touch in many Inlaid white, or light cloth, of-

ten gives an admirable effect. Zigzags of braid in black are effective on cloth suits and costumes. Strips of Oriental embroidery are finishing touch for

A shade between salmon and coral is lovely with gray. Embroidery in pastel Persian tints trims some rich beige cloth costumes to advantage.

About the only combination for the modish searlet is black or white. If a fur trimming is desired sable is quite the lovellest thing on maize. Pastel blue enjoys high favor as a touch on dark color costumes, as it does for entire hats and evening

A number of beautiful shades of rose, well blended, make a lovely

I OR A SECOND BRIDAL.

The fashion in bridal attire for a These are losses that cannot well be ding of Mme. de Yrarrazaval to the nificent in a becoming robe of white There is no evidence to show that moire antique, woven with gold and fogs are formed outside and invade or cut en princesse. Point d'Alencon was roses was tucked beside one of these bretelles, while two more, one at each side, dominated the cream lace mantilla-like arrangement which this bride elected to wear on her head. This was very clever for one who desired to wear a veil, but was not eligible for it. A band of sable bordered the trained skirt, while a cascade of lace seemed to continue down one wards, was in deep Parma velvet, Then the heat would be thrown into Duchesse de Cars was in emeraldand delicacy runing about even.

Thermite, a New Invention.

Herr Hans Goldschmidt, of Essen, Germany, has invented a compound which has the property of producing intensely high temperatures in such a way that they may be readily used for industrial purposes. This compound, which been aptly named thermite, is made by combining, in the proper proportions, oxygen, in the form of oxides, and aluminum, the metal found in common clay. When these two substances are combined and Hall's Catarrh Cure is taken internally and | ignited an enormously high temperaacts directly on the blood and mucous surfaces | turo is instantly obtained. The thermite is ignited by putting in a pinch of perozide of barium, and a fuse is led to this and lit. The oxygen contained in the oxide combines with the aluminum, forming an aluminum-oxide. The fused combination is hot enough to burn a hole with clean edges through an iron plate of any thickness, according to the quantity of thermite used, without heating the plate, except at the point of perforation. The material is not explosive, and if thrown upon a fire will not burn.-Harper's Week-

The Earth's Central Heat.

In the report of the last Coal Commission the constusion is arrived at that at a depth of 3,000 feet the temperature of the earth would C. C. RICHARDS & CO .: amount to 98 degrees Fahrenheit, of at least 4,000 feet might ultimately be reached in coal mining, The rate of increase the commission- promptly. ers thought, might for ordinary cases be assumed to be one degree Fahrenheit for every sixty feet, but it is in reality impossible to give any fixed rate of increase. The report of the British Association Committee on Underground Temperatures during the last thirty years tends to show, not only that the temperature gradient varies considerably in difierent localities, but that it is not easy to reduce a fixed law of, increase applicable to all cases. some parts of Western America the heat at 3,000 feet is almost unbearable, while at the Calumet and Hecla copper mine in North Michigan, U. S. A., there is a rise of only four degrees Fahrenheit in a depth of 4,400 feet, although no artificial ventilation is resorted to. The temperature of the coal on discovery at the Rosebridge colliery in Lancashire was stated by the management to be 93 degrees Fahrenheit, but it afterward fell to 63 degrees

WHY ORANGE BLOSSOMS ARE USED. 3

For many centuries the recogrized thing for a bride has been a wreath of orange blossoms. The question is especially interesting when you note the fact that in many countries the orarge blossom is entirely tabooed. The German bride wears myrtle, the, girl of the Black Forest takes the flower of the hawthorn-when she can get it. The brides of Italy and the French Provinces of Switzerland | Soap cannot be used to advantuse white roses. Spanish brides go in for rinks, carnations and red 21 roses. In Norway, Sweden and Servia and clean. the bridal crown is of silver; in Bavaria and Silesia glass, pearls and
