LITTLE KNOWN ABOUT FISH.

Recent Phenomenal Catches Show the Habits of Finny Tribes Are Peculiar.

largest run of salmon in Irish, English and Scottish waters ever known, and this came right upon a general assumption that the records of preceding years that the fish were gradually diappearing. This shows how little is understood about the ways of fishes. It is recognized that last year

England was phenomenally rainy. broke every known record for preceipitation. There is an intimation that that superabundance of fresh water may have had its influence in inducing the salmon to go upstream. The Spectator says that many salmon stay around in the sea and refrain from going into fresh water. It says, too, that it has been proved by marking the fish that within the space of five weeks the two days a salmon of ten and onehalf pounds has been found to grow to twenty and one-quarter pounds. Nothing else grows so fast.

The same journal refers to the story that salmon in our western rivers push each other ashore in their upstream rush, and casts a doubt on this. But perfectly trustworthy persons, of high intelligence and universally respected, will vouch for it that they themselves have seen the banks of rivers in British Columbia packed with dead salmon which produced such a disagreeable atmosphere by reason of their disintegration that it was almost unbearable for people who had to pass that way. In the push of fish there is not room for them in narrow parts and they are crowded right up to the banks. There is no doubt of this, and it is among the smaller anecdotes of the kind that one will gather in a trip in that part

### GREAT LAKE OF SIBERIA.

The drowning of several hundred Russian soldiers in Lake Baikal, in Siberia, has been chronicled in the despatches, but the report is declared erroneous. The lake is from 20 to 60 miles wide, and 500 to 600 miles long. It lies between 100 and 110 degrees east longitude and 50 to 56 degrees north latitude. Its area equals, Then heard they an angel who stood has taken up his residence in England, Its depth is a mile in places, Lake Superior, the deepest of American lakes, is 1,030 feet deep.

There is a convict route around the are so stupendous that the cost of a road over this route has been estimated; to be \$250,000 a mile. Roads in the Unit- Then Peter and John went, and all Japanese War Atlas issued by The under difficulties. The route is 150 miles long. It is evident why the Russian depends upon his boats in summer, which Forty days did He stay to confirm in convenient form for reference. builds his railroad upon the ice in winter, when it freezes to a depth of 12

In summer the storms strike Lake Baikal out of a clear sky. The wind rushes down from the north like a hurricane, without warning. When it strikes the surrounding hills, which nose out into the lake in rugged ,precipitous promontories, the hurricane changes to a cyclone, and the surface of the deep sea is twisted into the most appalling shapes. Russian boatmen never attempt to weather Baikal storms if there is any hope of reaching the nearest shore. If the shore be astern sailors turn about and flee. If it be ahead they flee. Baikal terrifles the Russian not only in summer,
