power, and experiments have shown that some sort of animal family, and Valin is it is unwise to attempt to build larger there always training his little pupils.

I suffered for over twenty years from whence no traveller returns"; or in mentioning a deceased person, shall her vanity to the grave," said an unhowever, the same results are obtained, and in several plants a series of two or three are being constructed to produce in the aggregate from twenty to forty horse power. The solar motor med is the outcome of experiments. In Europe "Father Cockroach" is the one member many efforts were made to utilize the of the army who has risen to the dignity feet in diameter.

In England, some twenty years ago, a insect. reflector, three feet in diameter, was built that fused granite in one minute tempt in Africa, where the sun's rays at that.
were considered strong enough to give One of constructed. In spite of this reliable into fantastic forms. scientist's predictions nothing was done to take advantage of conditions that seemed to promise great fortunes to those who succeeded in harnessing the Bumptious Rustic Had to Turn Over His sun for industrial purposes.

In this country Capt. Ericsson was the first to make a solar motor. It did not prove an entire success, but his work cazing with admiration at a fine fat beast paved the way for later efforts. Within at a cattle show. the next five years different attempts the same failure happened as to the orig- knowledge. inal in 1884. Another attempt, made at Longwood, Cal., added further discour-

The first which attained any degree of | companion. success was the solar motor erected in Denver five years ago, and which pro- I could guess as near as you can." duced nearly five horse power with considerable ease. It was this effect which led to further enthusiastic experiments until one of the large solar motors was constructed at Los Angeles two years ago. This motor has become the model for nearly all the others now springing up. It is not a perfected motor yet, but ! it has attained a degree of perfection which enables the owners to secure good work with it. Its cost also is so reasonable that it is not likely to limit its use to particular lines. For individual farms of ten to one hundred acres it is emin- the same." ently suited, either for pumping purposes or for generating electricity for the bumptuous farmer had to give him lighting and power. For mines and general pumping stations it is equally well

The huge disk of glass which serves as the heat reflector of the sun's rays looks like a huge inverted lamp. It is thirtythree feet in diameter at the top and thirteen feet at the bottom. The inside of this huge disk is made of glass, all arranged at such angles that the sun's rays will be directly focused upon the boiler. The arrangement of these individual pieces of glass is ingenious and much of the success of the experiment is due to this. Each glass is practically a small mirror, which follows the sun and reflects the rays at one central point | Have you heard of the

### STRANGE ARMY IN PARIS. Over Forty Thousand People Liva Solely by Their Wits.

Without counting the vagrants and professional beggars, there are no less than 40,000 people in Paris who have not the least idea where they are to get their breakfast when they get up in the morning. They go to make up a strange army, the like of which could hardly be found in any other city in the world. They are, in fact, living examples of people who live solely by their wits.

Where else in the world would one look for a man to skim a river but in Paris? And yet, incredible as it may seem, there is one man among that 40, 000 who makes it his business to skim the Seine daily. He sleeps under some hiendly bridge arch in the summer months, and in the winter no one knows, or cares, for that matter, where he finds shelter. He is up at the first peep of dawn and out in a rickety old flat boat, armed with a skimming pan.

With this he skims off the surface of the river the grease that gathers in the night. This he takes to a soap factory. where he receives a franc or two for his stock. On that sum he gets his breakfast, dinner and supper. For more than that, or the next day, he has no thought. There are others who live by fishing the Seine for corks. Early in the morning they get out on the river banks, and,

river has been fished clean of the stop-pers the anglers take their harvest to the cork merchants in the neighborhood and sell them for whatever they will

THE MOST DEADLY POISON.

Three Grains Would Kill Many Per-

A new and most deadly poison has been discovered recently, as noted in a scientific journal, by Mr. Lascelles Scott, an Englishman. The substance is scientifically known as di-methylarsine cyanide, or more familiarly as cyanide of cacodyl. Three grains of this substance diffused in a room full of people would kill all present. It is a white powder, melting at 33 degrees, and boiling at 140 degrees. When exposed to the air it emits a slight vapor, to inhale which is death. After trying its effect upon animals Mr. Scott experienced the deadly nature of this poison. One-millioneth part of cyanide of cacodyl in the atmosphere of an airtight cage killed a dog almost instantaneously, and then its power was by no means exhausted, for a second, third and fourth dog placed in the same cage instantaneously died from the effect of that single infinitesimal dose. Although so little of the properties of this poison are known, it was first made many years ago. Cadet the famous French chemist, by combining acetate of potassium with white arsenic, produced fuming liquid, which, although he did not know it, was oxide of cacodyl. The German chemist, Bunsen, combined this with cyanogen, a radical of prussic acid, and made cyanide of cacodyl

### BILLIARDS IN A LION'S CAGE.

Ipswich, in England, was recently the scene of an extraordinary billiard match. The manager of a circus offered to play any one in the lions' cage, and an amateur, well known in that part of England, accepted the challenge. Consequently a table was placed in the cage and at the appointed hour the game began in the presence of an immense crowd. The only other person in the cage was a woman, who is skilled in taming animals. She carefully watched the nine or ten lions as they strode to and fro, but her vigilance was apparently unnecessary, for the animals did not pay the slightest attention to the

The manager won the game, but the applause which greeted him was not more hearty than that which was accorded to the amateur, who had shown such rare courage in venturing unarmed
