WHEN BABIES CROSS THE OCEAN A Few Directions in Arranging for Their

Comfort. Here is a hint from Harper's Bazar for the mother who intends to take her ! baby on a trip across the ocean:

Buy a strong, light-weight basket about two and a half feet in length, one and a quarter feet in width, and a foot or more in depth. Pad such a basket securely with the softest cotton batting, over which a soft sheet of wadding is tacked in place, or a thick fleecy | Minard's Linament Cures Diptheria. piece of Canton flannel. This done, cover the padding neatly with a soft, firm pink or blue silk, or cover with a soft chintz having a rosebud pattern running over it. As the basket would be continuously exposed to a damp atmosphere, the chintz would prove most enduring. The basket could be edged with silk or other cords, such as the upholsterer would advise as the proper ply with a tight band of the same ma- to be not more than in its prime. terial as the lining, neatly edging the basket. In such a case fasten a rosette at each corner. In this basket the infant may be laid in much the same manner as he is put to bed, only with a warm hood on his head.

either side, of such character that the with advancing years. nurse can easily grasp and carry the child by means of them.

A New Kind of Steel.

Samuel Maxim, a brother of the Maxim of rapid-fire gun fame, has made a discovery in a process for producing steel which has remarkable qualities. Mr. Maxim is a farmer who lives Maine. For some time he has been expering with various methods for making blades which will vie with the Damascus [blade of immortal fame.

After reading some old Hindoo books he constructed a lorge on the Indian plan, and from this produced an ingot, which he forged into a rough drill. This drill bored an iron file as easily as if it had been a piece of wood. Tried with a scale of metals gradually increasing in hardness, this drill penetrated them all, not stopping at the best steel obtainable. In case this steel should prove to be like that of the ancients it will opes up a vast field of possibili-

Eggs by Weight.

There is a movement on foot among produce dealers to adopt the plan which is in use in many parts of the world for selling eggs by weight. The unfairness of the present method is more apparent than real. If a housewife were DO HER PART to buy by the pound instead of by the dozen she would doubtless receive one dozen she would doubtless receive one or two less for the same expenditure, unless the eggs were very large. But she would undoubtedly receive the same amount of nutriment, pernaps a little

preciate the following: The Thinside In, St. Louis, Thursday -I am comfortably situated in the Thinside Inn, which is a pleasant little tavern about as big as Missouri Valley. It is built of lath, scantling, jute, bagging, wall paper and paint, and is very sub stantial. A heavy man can climb all over it. I saw three bell boys carrying the bill for a night's lodging up to the fourth floor just now, and the beams didn't sag much. The management is careful though, and it puts all new guests on the ground floor. After they have paid their bill for the first day they put them on the second floor. By the time a man has paid his bill for two days h is light enough to go on the third floor with safety. When he has stayed a week they have to put weights in his pocket to keep him from shooting up through the roof.

I got into the inn at 9 o'clock, and 7 was ninety-sixth in the line. When got to the clerk he turned me upside down and shook me, then he counted what fell out of my pockets, told me to register and handed me a blue ticket for a bell boy.

THE SAD, OLD STORY.

"Drink did it; God help me!" were the words which a Brooklyn man scrawled on an envelope recently before he fired the pistol that ended his life. The man had a prosperous business and a large family to whom he was devoted in his sober moments, but he became enslaved by the drink habit and saw no way to break the chains that bound him but by ending his existence with his own hand. "Drink did it; God help me!" might well serve as a fitting inscription over thousands of other men who go down to ruin and death every year under a like enslavement. And yet there are those professing to have the well-being of the community at heart who would have the drinking shops turning out their grist of shame and misery not only for six days of every week but on the seventh day also.-Leslie's Weekly.

Reflecting Lighthouses' Origin.

Accident, not necessity, was the parent of the invention of reflecting lighthouses. During a meeting of a mathematical society at Liverpool some years ago one of the members laid a wager that he could read a newspaper paragraph at ten yards distance by the light of a farthing candle. This he succeeded in doing by covering the inside of an earthen dish with putty and sticking bits of looking glass on it, and then placing this reflector behind the candle, Captain Hutchinson, a dockmaster, was present, and from this experiment he gained the idea from which he evolved the reflecting lighthouse as built in Liv-
