(New York Times. The next observable total eclipse the sun occurs on August 30, 1905. is remarkably well situated, and is looked forward to with great interest. The shadow path begins at sunrise, south of Hudson's Bay, enters the Atlantic Ocean, a short distance north of Newfoundland, crosses northeastern Spain, northeastern Algiers, and Northern Tunis, passes centrally over Assuan on the Nile, and ends at sunset Northeastern Arabia. The duration totality on the coast of Labrador, in Spain, and at Assuan is two and onehalf, three and three-fourths, and two and three-fifths minutes respectively.

A number of eclipse expeditions have been planned, and among the foremost are the Crocker eclipse expeditions, socalled, because the expenses are to be defrayed by William H. Crocker, California. These expeditions are tographic search is to be made for than to the fashion of her making. intrimercurial planets, the solar coronacamera of five inches aperture and forty feet focus, and spectrographs will be used to obtain a continuous record of changes in the spectrum of the sun's edge at the time of second and third contacts.

There will be no special expeditions from the Yerkes or Harvard observatories, but it is possible however, that some of the observatory people may go as individuals at their own expense. There is a possibility of an expedition being sent from the United States Naval Observatory, Washington, D. C., if Congress this winter appropriates Plain as the proposition is, there are too many manufacturers who do not seem the necessary money for carrying out the scheme. If so, one of the Naval Observatory, Bloomington, Ind., has organized an expedition to Spain. The members of this expedition are John A. Miller, Professor of Mechanics and Astronomy; W. A. Cogshall, Assistant Professor of Astronomy; A. F. Kuersteiner, Professor of Romance Languages, who is now in Spain, and J. E. Valdez, a young Spaniard, who is a student in the university. These gentlemen are all members of the Indiana University. The university has French military aeronautic section. The assumed responsibility for the expedition, but it has been aided by generous contributions from The Indian-

photographic telescope of eight inch aperture and about 70 feet focal length will be used, mounted horizon- thus freed of outer reddish and sticky tally and fed by a coeloskat, the mirror of which is fourteen inches in diameter. Five exposures will be made with this telescope. The negatives thus obtained, it is hoped will give some information regarding the structure of inner corona. Four other cameras, varying in focal length from eight to sixty inches will be mounted on a polar axis. The equipment for this expedition will also include a battery of four cameras of three and one-half inches aperature and | Dear Sirs eleven feet focal length, with which | that we com photographs will be made covering the MENT a gion where the sun will be at that time be without it it will be made in Indianapolis, in order | lar a bottle, I mean it. to compare them with photographs made at the time of the eclipse. While this expedition will go to Spain, the exact location has not yet been definitely decid-

The Canadian Government has arranged for an eclipse expedition to be sent to Labrador under the direction of W. F. King, chief astronomer of the Dominion, while the British Astronomical Society is now making arrangements to send one or more expeditions to Spain, the point selected being a place thirty miles north Valencia, Miss Mary Proctor, daughter of the noted Engilsh astronomer. R. A. Proctor, is also organizing an expedtion from this country to view the eclipse in Burgos, Spain. The members of the expeditions will be mainly amateurs, who will make a Ratios, and the increase in its Surplus Still another postman, who had tramped to lay off work.

Minard's Liniment Cures Garget in Cows FATALISM AND FEVER.

Welsh Custom Which Helps to Spread

The people believe that if they are fated to catch the fever no precautions will save them from it, and that, on the

other hand, they can come in contact with it with impunity if it is not their fate to be infected. This spirit of fatalism, says the London Express, is shown by the Welsh custom of holding "wyinosau" or prayer- you want?

The friends of the dead crowd into the house, and remain for an hour or two regardless of the cause of death. At the end of the service they march in procession round the coffin to take a

last look. Although ministers of religion and members of public bodies have uttered vehement protests, the custom of the "wyinosau" continues to flourish, and in more than one instance it has been proved to be directly responsible for the spread of the infection.

Hoe's Maxim.

Robert Hoe, the famous builder of printing presses, has this for his favorite maxim; It is better to get behind a thing and push it along than to get in front of it and drag it after you. In other words, it is the work, not the man, that should attract attenion. This expression of reserve helps o explain why it is that Mr. Hoe is nover interviewed in the newspapers. He has an air of clegant leisure, but works as hard as any of is employees, thoroughly understanding wery detail of his vast business.

WHEN A WOMAN RUNS

Her Skirts Are in the Way and Influence Her Gait.

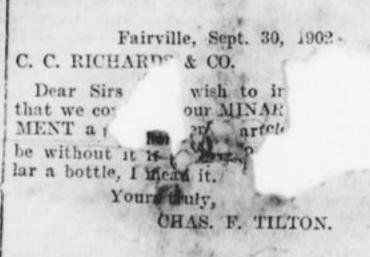

Profesor Mason, of Washington, declares that women is not built for running, adding that "she may walk like a goddess, but sae runs like a hen." There is good reason for the outspoken Professor Mason's remark, as contemporary observation discloses, says the Portland, Oregonian, but one cannot justly attribute it to any more deepseated reason than skirts. Diana, who would hardly "give unto the flying hart space to breathe, how short so even," was not encumbered with flapping petti-coats, nor did Atalanta outdistance her panting-if pantless-suitors under the handicap of even a rainy-day skirt. Nor, if magazine illustrations are to be believed, do the young Amazons of the girls' colleges run 100 yards in eleven seconds or thereabouts in the garb they wear at a dance. The "winning wave, deserving note in the tempestuous petticoat," has nothing to do with winning to foot races, and Professor Mason should be sent from the Lick observatory to attribute women's (alleged) henlike Labrador, Spain, and Egypt. A pho- gait to the fashion of clothes rather

A Boy on a Man's Errand.

The manufacturer whose products are ditributed to consumers through thousands of small retailers and who depends upon them to acquaint the public with the merits of his goods is making the old mistake of sending a boy on a man's errand. The little fellows can at best stimulate the demand each in his own particular neighborhood, while the manufacturer, by judicious newspaper advertising, can educate a whole nation to insist upon having his specialties. many manufacturers who do not seem to see that by helping the retailers they would be helping themselves.

Spider Culture.

Ten years ago a French missionary started the systematic rearing of two kinds of spiders of their web, and the Board of Trade Journal states that a spider web factory is now in successful operation at Chalais-Meudon, near Paris, where ropes are made of spider web intended for balloons for the spiders are arranged in groups of twelve above a reel, upon which the threads are wound. It is by no means easy work apolis News and The Reader Maga- for the spiders, for they are not released until they have furnished from thirty yards to forty-one yards of thread each. The web is washed and cover. Eight of the washed threads are then taken together and of this rather strong yarn cords are woven which are stronger and much lighter than cords of silk of the same thickness.
