Dr. Seifert is now making experiments of special interest. By means of the appli- partments of the larger shops. cation of the extremes of heat and cold to the caterpillars, butterflies of more gorgeous, or more sober colors, as the experiment may result, are being produced, and some entirely new and more picturesque species may yet be forthcoming from the freezing out of the incubating process which

In doing this he is following out the covery first made by George Dorfmeister, a Bavarian school teacher, and since folowed up by August Weissman, Dr. Standfuss in Zurich and W. H. Edwards in this country. Dorfmanter discovered that by ing to the family of Arctiidae away in the which made the resulting butterflies resemble a butterfly of a more northern clime.

Dr. Seifert has taken a butterfly common from Labrador to the Cape of Good Hope, and by the icebox or the incubator method he has achieved speciment which have an individuality of their own. He has taken butterflies familiarly known in the fields around New York, and by subjecting the chrysalids to extremes of heat and cold has obtained forms that would properly belong obtained forms that would properly belong to both Canada and Florida. The pupae from which it is desired to secure a more northern form of butterfly is put as soon as its shell is hard into the Then Dodd's Kidney Pills Cured sleep, to accustom it to the freezing temperature. It is subjected to the same

fore being exposed to a regular tempera-Not only will the effects of extreme cold eliminate the brilliant eyes upon the wings of brilliant butterflies, such as for instance the common "Painted Lady," but it will also of the insect, the wings most approaching the triangular in shape appearing in the modified form or more forked.

treatment when taken from the freezer be-

The females in general are far less in-clined than the males to yield in regard to color and design to the stimulating in fluences of temperature. While heat and of his cure Mr. Harrison says: cold usually act as stimulants in different degrees, in some cases almost the same modifications are obtained by extreme heat

Extreme heat seems to retard development just as cold does. Freshly formed pupae of the Arctic are exposed to a temperature of about 100 Fahrenheit for 100 "I doctored with several physicians hours gave after six days an extreme but it was all no use. Shortly after this southern form of this butterfly. In general the effect of the cold is found to produce northern forms with more sober coloring, while the heat brings out gorgeous col-

The apparatus employed in these transformations is exceedingly simple. It is an ordinary kebox or freezer, where the chrysis kept so fast asleep that a little matter tinued the treatment till I had used up either soprano or alto, and capable of which it would assume in an extreme northern clime. From the freezer it is transferred to a pasteboard box in a living room

The incubator, if such it may be called. is made from a square tin or sheet iron box. The oven of a gas stove would do. Lamps are placed beneath the box, and side are a series of horizontal shelves, upon which the chrysalids are placed. The temper-In cases in Dr. Seifert's flat are displayed his collections of butterflies and also the butterflies he has created. All the world is represented-butterflies from Thibet, rare check the injury to the eyes of the chiland hard to get; butterflies from Japan, dren," he declared. with mottled wings that in coloring resemble the Japanese tea boxes; immense stee blue butterflies from the Indies and Borneo. gorgeous flowerlike insects from South America, and queer ones from Mexico.

Dr. Seifert went to that State to raise and could not get here the food they needed. Caterpillars are fastidious, and won't eat everything. Many of them will only eat one thing, and there is one tropical species them are even made partially blind that will only feed on the leaves of the pas- from want of mere common sense and to contend with in his pairing and rearing matter. of butterflies. His care of his caterpillars alone is no sinecure. Each day of his life

he has to make an excursion to get food leaves of the witch hazel, while another will die if fed on anything but the twigs of the weeping willow. Some of them are a quick-acting, safe, simple and harmless

ping for caterpillar food often extends far beyond the limits of New York. As an instance of the experimental nature of some of his work, the doctor a few seasons ago found a rare green moth in the Bronx. From it he raised families for two season, but each season they died. Their food was investigated, and the third season the family grew to maturity. Dr. Seifert had been feeding them on the female blossoms of a certain conifer, when they needed the male blossoms of the same tree.-N. Y.

TRIBUTE TO MARGHERITA. Women of Italy to Honor the Dowager

A committee representing the women of Italy, with the celebrated actress, Adelaide Ristori, at their head, has been formed in Rome with the object of presenting the flagship of the Italian Mediterranean Squadron with a silver bust of the Dowager Queen Margherita, ip recognition of her majesty's poetically expressed love of her country.

In Rome alone 158,075 women have signified their desire to contribute toward the cost of the bust, the execution of which will be entrusted to an eminent sculptor, who will be chosen by ballot.

On the occasion of the ceremony of presentation, which will take place in Rome during the next spring season, a woman's congress and exhibition will be held.

Autographs of the women who have subscribed to the bust will be inscribed in an ornamental album with silver covers and pages of silk, which will be presented to Queen Margherita.

The Careless Doll. (Youth's Companion.)

You naughty, careless, stumbling don! Just see your new clean dress! I'll have a dreadul washing to do, you are in such a mess. You must look where you're going, and a little trouble take. But dear me! dolls will never think of all the work they make.

On the Battom Step. Mr. Chellus-I thought you said I held the first place in your heart. Miss Gidday-So you do, but the first place, of course, is down at the bottom.

We Measured the Baby. We measured the riotous baby Against the cottage wall;

A lily grew at the threshold, And the boy was just so tall— A royal tiger lily With spots of purple and gold And a heart with a jeweled chalice The fragrant dew to hold. His eyes were wide as bluebells.

His mouth like a flower unblown; Two little feet like funny white mice Peeped out from his snowy gown.

And we thought, with a thrill of rapture,
That yet had a touch of pain, When September comes, with golden rod, We'll measure the boy again.

And me, in a darkened chamber With the sunshine shut away, Thro' tears that fell like a bitter rain We measured the boy to-day. And the little bare feet that were dimpled, And sweet as a budding rose, Lay side by side together, In the hush of a long repose.

Up from the dainty pillow, White as the rising dawn, The fair little face lay smiling With the light of heaven thereon, And the dear little hands, like rose leaves, Dropped from a rose, lay still, Never to scatch at the sunbeams.

For the little white velvet casket That awaited him below. And out of the darkened champer Our little one had grown.

N. Y. LIFE PRESIDI

Some Very Rotten Tran

Inquiry

New York, Oct. 2.- George W. Perkins, Vice-President of the New York Life Insurance Company, and member of the banking firm of J. P. Morgan and Company, created a stir before the Legislative Investigating Committee to-doy when he objected to a request that he produce certain books of J. P. Morgan and Company to explain some of the firm's dealings with the New York Life Insurance Company in connection with the sale of navigation syndicate bonds to the life insurance company. He said he would furnish copies of the entries referring to the transactions in question, but preferred not to bring the books. Mr. Hughes, counsel to the Legislative committee, for the first time during the investigation, showed signs of anger, and said loudly: "I shall have to require that those books be produced."

"All right," replied Mr. Perkins, Perkins a Financial Poo-Bah,

Testifying to the purchase of \$4,000,-000 of Cleveland, Cincinnati, Chicago & St. Louis bonds from J. P. Morgan & Company, by the New York Life Insurance Company, Mr. Perkins said he obtained the bonds at \$40,000 less than the price stipulated by the Life Insurance Company's finance committee. Questioned by Mr. Hughes, Mr. Perkins said that in this purchase and sale he himself represented both the New York Life Insurance Company as purchaser and the firm of J. P. Morgan & Com-

pany as seller. Testimony was given by Henry Rogers Winthrop, financial manager of the Equitable Life Assurance Society, to the effect that when the Navigation Syndicate, which turned out to be unprofitable, made calls for money on the George H. Squire trustee account for payments on account of syndicate participation, the money for the payments was obtained by borrowing \$250,000 from the Equitable Trust Company, Of this amount \$27,000 has been repaid. Mr. Winthrop said that in his opinion the money advanced to the George H. Squire trust account on this transaction was really the money of the Equitable Life Assurance Society.

Where Did the Money Come From?

Henry Greaves, a clerk employed by the Equitable Life Assurance Society continued his testimony before the Legislative Insurance Investigation Committee to-day. He gave further details of the payment of checks to the George H. Squire trustee account. Concerning one entry of \$40,000 deposited to the account on July 12, 1901, and the immediate withdrawal of the sum by draft, Mr. Greaves said he knew nothing. He did not know where the money came from nor by whom it was withdrawn. He could supply no information as to the profits of a half interest in Chicago & Alton Syndicate credited to the Squire trustee account. Other syndicate profits in 1902 and

1903 deposited with the American Deposit & Loan Company to the credit of this account witness was unable to explain. On May 1, 1901, a new book for s these entries was opened, and a balance | h of \$62,770 was credited. The bank de- be posit book was kept by Thomas D. Jordan, at that time comptroller of the sa Equitable. Checks for deposit to this to
