Cow Testing Associations.

In a report just received of some cov testing operations in Scotland during 1906, the following figures occur, and be read here with interest,

In the Stewartry association, comprising 12 herds and 600 cows, the average yield of 10 per cent, of the heaviest milk ing cows in each herd during 214 days (26th March to 31st October, 1906), was 6,850 lbs. of milk, testing 3.9. The average yield of the poorest cows was 4,230 testing 3.6; this indicates a difference of 2,620 lbs. Six of the best heifers, 3-year-olds, in this association averaged 6,030 lbs. milk, testing 4.1.

The Dumfriesshire Dairy Farmers' Association comprises 22 herds, 742 cows. The Iron Age, an authority on all matters pertaining to the iron trade, says that the gravest evil from which the United States are now suffering is the decline in the efficiency of labor. It finds expression in slouchy work on the part of those who know how to do better, and poor work on the part of those who have never been taught or are incapable of learning. It also says that to the more serious defect of lowered quality is added the troublesome feature of lessened quantity. It also adds the significant statement that when the demand for labor declines the process of weeding out the lazy and the inefficient promptly begins, and it may be accepted. laborer.
