

## The Pure in Heart.

I asked the angels in my prayer, With bitter tears and pains, To show mine eyes the kingdom where The Lord of Glory reigns.

I said, my way with doubt is dim, My heart is sick with fear; Oh, come, and help me build to Him A tabernacie here.

The stories of sorrow wildly beat, The clouds with death are chill; I long to hear the voice so sweet, Who whispered, "Peace be still!"

The angels said, God giveth you His love-what more is ours? And even as the gentle dew Descends upon the flowers.

His grace descends; and, as of old, He walks with man apart, Keeping the promise as foretold, With all the pure in heart.

Thou need not ask the angels where His habitations be: Keep thou thy spirit clean and fair, And He shall dwell with thee. -Alice Carey.

## God's Promises.

(Theodore L. Cuyler, D. D.)

The solveney of a bank or the strength of a government gives their value to the notes they issue. So it is the infinite solvency of the Divine Ruler that makes all God's promises to be 'exceeding great and precious.' And on them rests the true Christian's assurance and his peace of mind in the darkest hours. It was happily expressed by an old negro on a Virginia plantation, whom a friend of mine once asked: "How is it, Caesar, that you are always the happiest man on the plantation?" "Because, sah, I always lays flat down on de promises, an' I prays straight up." Humble, happy soul, he was not the first man who had eased an aching heart by laying it on God's pillows, or the first who has risen up the stronger for a repose on the unchange, ble words of the infinite love. God's promises are as great as their giver. Open thy easket, my brother; pour out the golden ingots stamped with the image and superscription of the King! Count over the diamonds that flash in thy hands like stars! Compute, if you can, the worth of this single jewel, "He that believeth on Me shall have everlasting life," or this other one, "Ask and ye shall receive, seek and ye shall find, knock and it shall be opened unto

you. Then remember who it is that made these promises and to what poor, unworthy creatures they are given, When Julius Caesar once gave a man a great gift the man said, "This is too great for me to receive." And the noble Koman replied, "It is not too great for me to give." The smallest promise in our Eible casket is too much for us poor sinners to deserve; yet the largest promise is not too large for our Beavenly Father to make good. eli scoras to act meanly by His children, and wonders that we so often act meanly toward Him, Many people commit the greivous mistake of forgetting that nearly all of the Divine promises are conditional. God

as a sovereign has a right to prescribe the terms on which he will bestow his priceless blessings. The Bible sparkles with premises of salvation; but whom? Are they made to any man unconditionally? Not that I can discover, God commandeth all men everywhere to repent, and makes repentance of sin one condition of salvation. Another condition is faith on the cracified Son of God. He that believeth on the Lord Jesus Christ Eath everlasting life; he that believeth not is condemned already. because he bath not believed on the only begotten Son of God; he shall not see life, but the wrath of God abideth These terms are explicit enough. It is not strange that an yone should expect to be saved who is nullifywith God's terms?

As the promises of salvation lie besale the cross of the atoning Jesus, so it may be said of the promises in regard to prayer, that they are to be found beside the mercy seat, "Ask and ye shall receive." There is no receiving without the right seeking, no opening to us unless we knock with the right spirit. If you have ever gone to that mercy seat and come away empty, it was because you asked amiss. God makes His own conditions. To penitence and faith He gives liberally, to selfishness or unbelief, nothing. He loves to give when we will let Him give, and is never better pleaced than when we importune him with his own words, and plead before Him His own promises. Yet there is a fearful amount of sceptism. even with many professed Christians, in regard to the answering of prayer. Good people often forget that there are many sincere and proper petitions that we cannot expect to see answered at once. Many a faithful mother's prayers for her children have brought down precious blessings upon them long after the sod has grown green over her slumbering dust. The first martyr, Stephen. prayed during the agonies of death for his persecutors; when he was in paradiee the young bigot who was an accomplice in his murder became a trophy of redeeming grace. Let despending parents and desponding churches remember that God often puts perseverance to the test, and delay does not mean denial. God sometimes puts a long date to His promises. David does not come into His promised kingdom for many a year, and Abraham does not see His promised son until he is an old man. The young grain gladdening the fields with green slept under the snow and frozen colds all through the long winter. How often I think of the reply of the simple-hearted old nurse to the mother who was worrying over her sick child: "Ma'am, you just trust God; He's tedious, but He's sure." I don't believe that there is such a thing in the history of God's Kingdom as a right prayer offered in the right spirit that is for ever left un-

answered. God works on long lines, but with an unerring hand; in this life we look at the weaving tapestry of His provide ence on the ravelled side; in eternity we shall see the tapestry beautifully finished without one thread of His promises scribable violence struck both bridge pard, by one a sheep, and would finish

# PRETTY MOTOR BOATS; BUT---.

MAN WHO GOES TO SEA.

No Need, He Thinks, of Paying \$3,000 for a Marvel of the Metal and the Engine for \$500.

The boats exhibited at a recent show in this city were marvels of skill in fashioning costly woods and metals into pleasing shapes. Thousands who are interested in craft propelled by explosive motors looked at them with wonder. A comparatively few visitors who are judges of fine cabinet work fully perceived how much skill had been expended in turning out these boat shaped creations. But some critics said there were few boats exhibited that were suitable for any purpose other than exhibition on land, in a hall, and protected by brass railings or silken lines. It was interesting to not the smile with which such users of motor boats of the sizes displayed at this exhibition turned away from one exhibit after another and continued their tour of the hall. "What do you think of her?" one of these visitors was asked as he was looking at the

glistening body of a launch of some thirty feet length. "Mighty pretty," he replied.
"Think of buying her?" He could have which the boat was priced. "No," he said; "for one thing I have place to keep her. "Haven't you got a private front on

such a boat as that go to do with the bay? I admire boats almost as much as I love the gea, and if my house was up among the and threes and groups In the afternoon houses of the rich and had a fine picture Mrs. London and I stood in the judges' gallery in it I would buy that launch and see it on a mahogany cradle in the middle of the gallery and hire a man or two to keep | manship and costume to the pa-u riders.

But you have a slip that is private and "That wouldn't keep the boat from getting wet on her underbody. And suppose such a brows of hills and across the grassy level An' whar is de rich man now? thing as an old railroad tie should drift into the slip in the night and get up against "But think what a pretty picture she would

ing, with your friends on board, clipping through the little seas at eighteen or twenty "Have you noticed her bows?" the boating man iterrupted. "Yes? Well then you would know that if she was clipping up across the Potato Patch at even seven or eight miles an hour and fell in with the wave thrown by a Coney island steamboat my guests would need to have oilskins on and every one would have to work a bailing

"Any boats here that interest you?" "Yes, nearly all of them interest me." "I mean any one that you would like to possess for your own use?" "I can't say that there is," 'was the reply, "The number of men who find pleasure or profit in using motor boats is growing larger every year. I know a good many of them, but I don't know one who would have any

say, as the lower bay," "Perhaps they haven't the means?" "Most of them haven't the means-in the sense of being able to afford the money asked for what you get; others have the means, but they know something about boating '

"What do you think of the show of A lot of good motors, most of them badly disfigured and rendered practically unserviceable by unnecessary appliances." What do you mean?"

"Well, the gasoline engine is the simplest motor that can be made except a waterwheel or a windmill. Do these beautiful machines look simple? that could not be made better, more durable, more trustworthy and more efficient by taking off practically all of the parts that make them look complex. Good construction, sufficient lubrication and trustworthy ignition are the essentials of a good gasoline motor.

None of these essentials requires a multipli-"It is a pleasure to see here," the man went on, "some motors of sterling quality, with no useless parts and no embellishments. Some sizes are powerful and costly, others are for smaller craft and are not costly What an interesting show this would be some of these engines could me shown in hulls designed for seaworthiness, carrying capacity and durability-such hulls as you or I would like to use on the baye or along shore, or on the Sound or the rivers, and could be anchored out or tied up at a float overnight without feeling uneasy because they they were not in glass cases! When the next motor boat show is held in New York I hope to see at least one exhibit that will not only interest such boating men as I know, but will make them want

"Well, a hull say 25 feet over all, of good lines, substantially built, heavy enough to a good deal of banging, seaworthy enough to go to the Hook in any decent without power; a boat that will go eight miles an hour with a six horse-power motor. "Wouldn' that be a useful boat, and wouldn't it attract attention at the showespecially with its price tag on ft?" "How much would the tag say?"

to own such a boat.

"I don't know exactly. I am not in the boat business or the engine business; but I can get such an outfit now, giving the bostbuilder and the motor builder his price, for less than \$500.-N. Y. Sun.

### +++ TAY BRIDGE DISASTER.

#### The Accident That Cost Seventy Lives Recalled.

The London Standard on December 28 the twenty-eighth anniversary of the terrible disaster which befell the Tay bridge, in Scotland, in 1879, said: The bridge was about two miles in length, and spanned with estuary of the picturesque river which, after wandering through the Perthshire highlands, finds its outlet in the North Sea. It connected the railway system of the southern counties of Scotland with that of the North-Eastern Company between Dundee and Aberdeen, and the train which was overwhelmed in the disaster was travelling at the time from Edinburgh to Dundee. The wind was blowing a terrific hurricane and the night was intensely dark. About 70 persons were in the train, not one of whom escaped, nor, when the divers were able to descend could a single body be found in the carriages or among the girders, and some days elapsed before any were recovered. On arriving at the last station before reaching the bridge the tickets were collected as usual, and the signalman handed to the stoker the baton, without which no train was allowed to cross the bridge. It was 13 minutes past 7, on a Sunday evening, when the train moved on to the bridge, and a signalman and a surfaceman watched it as it proceeded along the rails to its doom. It was travelling at the rate of three miles an hour, the maximum rate prescribed for all trains when crossing this great engineering structure. The men were able to trace it until it reached the central consumption of food in 24 hours conspan. What actually happened then cluded that if the spider were built procould never be discovered. But as portionately to the human scales, he the train was reaching the centre would eat at daybreak a rhinoceros, by of the bridge a blast of wind of inde- seven a lamb, by nine a young camelo-

scribed at the time, resembling a continuous roar of thunder. permanent residence."

----Persistence of the Russian Police. The persistence with which the Russian police follow up a revolutionist is illustrated in the case of Nicholas Tschaikovsky, who, a short time ago, was arrested at St. Petersburg. Tschaikovsky was the founder of the first revoluntary circle in St. Petersburg, during the reign of Emperor Alexander II. He was arested in 1875 and was to have been sent to Siberia, but escaped and went to England, where he had lived ever since, aiding the patriots as well as he could from such a distance. Some months ago he visited the United States in the interest of the patriot movement in Russia. After his return to England he became convinced that it was his Yet there is probably not one of them duty to return to Russia to work for the cause. He entered the Czar's domians well disguised, as he supposed, but it seems that he had been dogged by government spies all the way from London, and as soon as he crossed the Russian border he was taken into custody. It is feared that he will now

CISTERN OF HOT WATER. Masural Curiosity on the Plains Near

Heber City, Utah.

Of ever inc. ch ing in enert to natural curiosity seekers are the Hot Pots, about three miles from Heber City. Utah, This region is a level plain, up. a the surface of which arise in strange confusion numbers of conical shaped cisterns, the largest of them being all of 50 feet in height, 100 feet in diameter at the top and twice that at the base and containing in their dark depths immense volumes of water heated to a high temperature in the furnaces of the earth. The waters contain the usus chemical properties of thermal springs and are used for bathing and drinking. These pots evidently have been formed by the slow deposition through countless centuries of the silica and soda which enter into the composition of the waters. They grow in height steadily with years and present a most interesting spectacle of nature's strange Harry Fletcher Kenney, former super- creative methods. The Hot Pots are found in the midst of cultivated fields and thriving orchards, notwithstanding the peculiar rock-like soil composition. caused by carriages and horses as they move over the roadways for miles

Lord Kelvin's Romance. There was an element of romance in the late Lord Kelvin's second marriage. It was at the Canary Islands that the great scientist met his bride to be, and her apparent interest in scientific pursuits drew them quickly together. The scientist went to great length to unfold a new system of signalling, and as he said good-bye to the lady on the bridge of his yacht on leaving he looked at her and smilingly said: "Do you think you understand the system now?"

"Oh, yes," replied his lady friend, "I am sure I understand." "Then," said the scientist, "watch the vessel as it disappears from view and I will flash you a message." The message was, "Will you be my

Rockefeller Waistcoat the Latest Mr. John D. Rockefeller has set the fashion for wearing paper waistooats in winter for protection against cold. For many years Mr. Rockefeller has been wearing a paper waistcoat under his outer waistcoat, but only recently did his friends become aware of it. Some enterprising merchant heard of it also. and the result is that the market in now flooded with neat paper waist

worn over the stomach and chest in cold weather. They are very inexpensive af Paper as a protection against cold is not really new, though it may be novel to this generation. The troops of Gen. - Washington in the Revolutionary used paper to keep them warm, by putting it in their shoes, and were thus oft-

coats made of yellow tissue paper, to be

en saved frostbitten feet. To many it does not seem reasonable that paper could be any protection against cold, but no doubt many will remember the experiment made in school of taking a piece of paper in both hands. holding it taut and trying to tear it. 22 In many instances the children have not strength enough to do it. This shows how closely kpit paper is. Its particles are so adhesive that no air can pass through, and this in a measure explains Lesmahagow parish a circular spot its use in cold weather.

The vision of torn flesh and crimson stream was followed neither by fainting or frenzled rush for help of neighbors. There was instead a quick movement of deft hands, in a moment the flow of blood was staunched by a fragment of dress applied with the skill of trained nurse, and then a firm support of faltering steps to the shelter of the house. Arrival under the rooftree was not the ending but rather the beginning of the real strain. There was no hall telephone with a surgeon in the next street. Assistance could be summened only by toessenger, and an hour and balf passed eacs minute seeming an age, before the doc-tor came. During all that wears wait, a young girl, with touch of velvet but nerves of steel, held the bloody bandach in place and with gentle firmness soothed and calmed a patient in whose case the most acute sufpring was acceptuated by mental anguish due to the knowledge of the fast that a hand which had served for sixty years was forever gone. Even the arrival of the longlooked-for aid did not bring immediate relief; the final duty of assisting at the preliminary operation rendered necessary the wound still remained. An historic phrase, slightly changed, well be applied: "It was not war, but it magnificent. was too bad, but we needed that
