

Wish to Sin No More.

(Lines to a repentant friend.) There was a day-why was it mine? A day that looks so dark Along the backward trail of life. That trail so dark, so dark.

Did I. a man with upward look, With make and mould divine .-Did I once tread that darkened track? Was it, was it once mine?

Ah, surely those deep marks are not My footprints, printed there, Where foul Ill-visaged Evil walks-Have I, have I been there?

Have I seen lurid lamplights glow, And thought them sunshine bright? And madly danced to wanton strains, With deviling delight?

"Did I my fellow creature mock, My fellow creature-man? And fiendish laugh to see him fall My weakling brother-man?

Tho' poor and low could be not feel An arrow in his heart? And when Malignance trod him down-Did I the outstretched hands pass by

Enough, enough, look not again, My soul, look back no more; hide that trail, that pain, my

The pleading cry ignore?

I wish to sin no more. There is a day-why is it mine? A star shines on before, A noble hand is guiding mine-Oh, guide me evermore!

Denizens of the Air.

-Grant Balfour.

The air of dwelling rooms and even the atmosphere of great overcrowded cities, is the home of innumerable living creatures, some comparatively harmless, but some murderous and homicidal, ever seeking some congenial human tenement in which they can thrive and cause desolation and disease. In order to give some conception of these terrible creatures to which scientists have given also terrible names, such as zygomycetes, schizoprytes, staphylo or protococci with many other equally involved and abyrinthine terms it is only necessary to take a square glass receptaele from which the air has been exhausted into a crowded room, admit air, and, after having hermetically sealed it, take it into a dark room, project a ray of smalight through it, and photograph it. If the photograph be then emarged by means of a photo-microscope and thrown upon a screen; or better still, if a circumstograph were taken showing the animal's fighting, and rampaging about, and devouring each other-for it is known that there are benevolent bacteria which devour the malevolent disease creators it would be seen what myriads of these repulsive creatures are inhaled by those who sit in crowded unventilated rooms.

And in addition to these bordes of living animals there is a misceilaneous collection of various minute, but certainly not particularly agreeable, particles floating about the atmosphere which are inhaled and exhaled first by one and then by another of those in the room. Doubtless it is owing to the absence

of all these measure organic and inorganic particles and living creatures which a sea voyage, or a stay in the higher ranges of the atmosphere in the Swiss mountains; or even a sejourn at the sea coast, which has such a beneficial effect upon the health, gives to the pule face of the twellers in crowded stores the weakly and sickly child to

. But we know that in addition to these denizens of the air, there are also other beings, some malevolent and maligh, some beneficent and sympathizing. And these who fatuously forget their, Creator, and refuse or neglect to obey His laws, fall an easy prey to the former; while those who love and obey Him, and who have accepted the Saviour of the world as their Redeemer, laying their sins upon Him who died for them, will have the inestimable boon of knowing that He has given His angels charge over them, and appointed a bright angelie guard for them,-By a Banker.

Ordered Lives.

Only the other week, astronomers

were watching eagerly the transit of the planet Mercury across the sun. On the basis of calculations made beforehand the precise moment was predicted when the planet would pass a given point. The predicted time varied from the actual time by but a single second. This accuracy of prediction was possible because the physical universe is governed by laws. There is no such thing as chance in nature. Wherever science goes, it brings back proofs that a directing and controlling Mind has been carrying out its wise and far reaching designs. As our knowledge of the world about us grows, the conviction is deepened and strengthened with in us that the hand that made it is

divine. "In the beginning God." Not less true is it that our own lives are being ordered by the same wisdom walk: it is chosen for us. We do not sel of our life is spread out, like chart on which the navigator sees his often by strange and perplexing ways, to the haven of His own rest.-By Rev. J. M. Dunean, B. D.

---A Cook's Confession.

Several ladies sat after a card party ago, discussing the virtues of their husbands, "Mr. Bingleton," said one of "never drinks and never swears-indeed. he has no bad habits." "Does he' ever smoke?" some one asked. "Yes, he likes | prives them of the opportunity of a good eigar just after he has eaten a good meal. But, I suppose, on an average, ness of their own, and it often comhe doesn't smoke more than once a month."--Philippine Gossip.

FUN OF BALLOONING.

Reasons Why Air Voyaging Should

Become a Popular Sport. Floating softly up into the blue ocean of air, watching the earth sink slowly away beneath us, and fade and change quietly to an immense map spread before our wondering eyes-such are the first impressions of balloon voyagers. The noisy shouts of those who come to wish us "Bon voyage!" become fainter and fainter until absolute quiet reigns about us. It is so still that the ticking of the clock in the barograph is heard noisily counting the seconds as it traces the line of our upward flight across the

sparkles in the sunshine, giving life and A. Slocum, Limited, Toronto. fire to the sober shades about it. A railway train creeps slowly along, its trail of smoke streaming back over it; but as we look, it suddenly disappears from sight, apparently swallowed up before our eyes. Then we realize that it which to us seems only a flat surface; now it appears again, coming out on the other side.

ever changing, but ever grand and inspiring-scenes that come back to us real and vivid, that we may live them over again our balloon falling upon their white surby a halo of rainbow colors or rare and to have reached some other planet. The white masses just below seem to be nobody. quite solid, and look as though one might step out of the balloon and take a stroll over them, if one only had snow shoes. The air is wonderfully clear and pure, and gives us a feeling of exhilaration much greater than that enjoyed in mountain-climbing. Is it, then, surprising that ballooning is rapidly becoming a popular sport ?- From Henry B. Hersey's "Experiences in the Sky," in the March Century.

----VISIBILITY OF LIGHTS.
