The Heart's Cry After God. (By the Rev. Archibald G. Brown.)

"My heart and my flesh crieth out for the living God."-Psalm lxxxvi., 2.

If you look into the Psalm from which my text is taken, you will see that it would be impossible for David to use stronger language than he does to express his desire, for in the second verse, from which we have selected our text, he says, "My soul longeth." The word in the original is stronger than that. The literal translation would, perhaps, be more after this sort: "My soul hath grown pale. It is ready to faint away for the courts of the Lord."

Just as intense desire will eat the strength of our manhood, and put a premature paleness upon the cheek, and earlier furrows on the brow, "so," says the Psalmist, "my soul is literally pining away to be found once more with the Lord's people."

As if that were not enough, he adds: "Yea, even fainteth"; and the idea there is consumed with desire. And then he goes one step further: "My heart and my flesh crieth out for the living God." They can contain their desires no longer, and so my tongue maketh this wilderness to echo with my call. I cry until these rugged mountains send back the sorrowful notes of my voice. "My heart and my flesh crieth out for the living God."

You will see that, after all, the Psalmist reaches the climax of desire, not when he speaks of the sanctuary, but of God Himself. "My heart and my flesh crieth out"-not for the tabernacienot for the services of the priesthood fices and burnt offerings, but for God-

A caged bird cannot fly; does it therefore cease to be a bird? No; that it does not fly is because it is in a cage, Open the door; see, now, how quickly it darts through the opening, and flies, skimming through the air, heavenward, It has the bird's nature. It had the desire for flight even when the cruel wires

Often does he get eaged, and if you were to judge simply by appearances you would say: "Surely he has not the nature of the Christian within," Only open the door. Only give him a chance of flight; you will see then that, after all, the desire of his soul has been towards God: for, in the language of my text. he says: "My heart and my flesh crieth out for the living God."

There is a hunger in the heart of the saint which only God Himself can satisfy. Thou mayest fill its mouth with everything thou canst think of, and it will yet hunger and cry out for: "God! God! God!" If you are really a believer -a saved man-the world cannot makeyou content, let it try its utmost.

If all the wealth of the universe were yours, and all the honors that society can give were lying at your feet-i everything a natural heart can wish for were in your possession, you would be as wretched as hell with it all if you had not the living God by your side. If, on the other hand, you are a child

of God, and walking in the light of His countenance, though trade may be bad madhough children may be sick, though sorrows may come like Atlantic billows one after another, in ceaseless roll, you will

yet be able to say: "My soul rejoiceth 10) ence, and nothing else, yet knows he is ich to all the intents of bliss. He that has all things else, but lacks the realized presence of his God feels unutterably and poor All the experiences of the Chriswar white more solve themselves into this: "My heart and my flesh crieth out for God."

Consolation of a Saviour.

It may be a sort of a general inspection to see if I have added any new features, or lost any of those pluck- | Minard's Liniment Co., Limited ed from the family tree. Perhaps it is only to observe what the day's burdens have done for me in the way of reason, it is a habit; but I didn't realize how precious it was to me until J got back to the tent and found that our only mirror was in Eddie's collection, Proprietor Roxton Pond Hotel and Livset in the back of a combination combbrush affair about the size of one's

Of course it was not at all adequate for anything like a general inspection. It would just about hold one eye, or a part of a mouth, or a section of a nose, or a piece of an ear or a little patch of hair, and it kept you busy guessing where that patch was located. Furthermore, as the comb was a part of the combination, the little mirror was obliged to be twinkling around over one's head at the precise moment when it should have been reflecting some portion of his features. It served no useful purpose thus, and was not much better when I looked up another comb and tried to use it in the natural way. Held close and far off twisted and turned if was no better. I felt lost and disturb ed as one always does when suddenly deprived of the exercise of an old and dear habit, and I began to make mental notes of some things I should bring on the next trip .- From "The Tent Dwellers," by Albert Bigelow Paine," in The Outing Magazine for June.

ISSUE NO. 26, 1908 World's Deepest Bore Hole

The deepest bore hole in existence, we are told by Prof. Louis, of London is at Paruschowits, in Upper Silesia, and is 6,573 feet deep; it began with a diameter of 12.6 inches and finished at 2.7 inches. It is easy to imagine the difficulty of boring so small a hole

to the depth of one and a quarter

miles. The engineers could not have

shows the dependence of mining upon "The property was taken while you the allied arts. The writer goes on: "Bore holes such as these are now always made by means o' the well known diamond drill, which brings up a core of the rocks passed through, and thus affords positive information "Well, he took it. It's a plain case." "No," said the other. "It's a hunting respecting them. Unfortunately, the only kind of diamonds suitable for case, with a lot of gingerbread work on this purpose, the dark opaque stones, showing no distinct cleavage, known in the trade as 'carbons,' are scarce and proportionately dear, so that diamond drilling is now a costly operation; I have, however, good grounds for saying that we are within measurable distance of seeing such 'carbons,' or at any rate 'boot,' produced artificially. For rocks of moderate hardness these diamonds have of late years been replaced to some extent by shot made of specially hard chilled iron, but these are of little use in the harder rocks. One of our greatest needs at the present moment is a metal that shall be strong, tough, and considerably harder than quartz; the production of such a materia
