fornia in Search for Big Horn Sheep. Mr. and Mrs. Howard S. Reed, in their recent two months' trip in Lower California, shot more big horn sheep than ters Bering Sea at the end of the close ever before were secured by one hunt- season in August, when they are free ter?" asked the street urchin of the ing party, and this means much, for the under the ineffectual regulations adopted successful stalking of sheep on the pen- by the Paris tribunal to use the spearinsula is regarded as one of the most difficult of accomplishments. The ing, outside of the sixty-mile zone, the Reeds' nineteen victims were not only seals that frequent these waters in purexcellent specimens but included big suit of food. As these seals are mainly horns of all ages.

Mr. and Mrs. Reed, who were accompanied by Elbridge D. Rand, went down the west coast in a schooner and landed at a village not far form Magdalena Bay. They had three guides and packers, a pack train of eight mules and three more animals on which they rode. The Reeds gradually worked their way 150 miles inland, reaching a region seldom invaded by white sportsmen.

The scarcity of water was a very serious matter. It had sometimes to be packed for thirty miles and was seldom of good quality. The water holes when found proved to be more or less contaminated. The country is as wild and rocky as parts of Wyoming. Before the trip was ended nearly all the footwear was torn to pieces. It was almost impossible to

keep shoes on the mules. Unquestionably the success of on the recent trip for big horn sheep range from northern Alaska to the

Fate of Alaskan Fur Seal Herds.

"The Alaskan fur seal herd is being rapidly exterminated by pelagic sealing vessels, mainly Capadians," said Professor David Starr Jordan. These sailing vessels follow the herd as it moves along our Pacific coast in the spring, and enmore deadly than the shotgun-in killfemales that have brought forth their young on the Pribiloff Islands, the killing of the mother seals results in the starvation of the young upon the land, and the inevitable rapid extinction of the fur seal herd. Unless something is done for the protection of the seal herds within five years not only the Alaskan but aslo the Russian seal herds will be completely exterminated, and deprive this country of a valuable source of revenue and the world of a great boon."-From the Washington Herald.

Rossway, Digby Co., N. S.

The barge H. W. Conklin, of New Lon-Black Watch don, Capt. Law, carried the largest consignment of oyster shells ever taken from this harbor when she sailed on Sunday. There were about 30,000 bushels of shells in the cargo, representing 30,000 gallons of ovsters. The usual barge shipment of shells from this port is between 10,000 and 15,000 bushels, although the largest previous cargo was 23,000 bushels. The shells are to be used in cover-

ing oyster beds in New Haven. They are put on the beds in preparation for the spawning season, which is close at hand. Oyster spawn, unlike other fish spawn, is a creamy substance which rises to the surface of the water and after floating about in the form of scum sinks to the bottom and adheres to whatever hard substance it comes in few days ago sitting on a nest among contact with. Thus the shelling of the the coal of a Great Eastern Company's beds facilitates propagation, and a large engine running between & Margaret's number of shells are used every year in and Buntingford has had several predethat manner. "Ownership" Fraud It is doubtful whether there could be gotten together a body of men more specially fitted to investigate municipal lighting than the six who were selected by the Civic League of St. Louis. Their report, excerpts from which are given elsewhere in this issue, contains three distinct contributions which are worthy of the thoughtful consideration of all citizens. In the first place it shows why the actual cost of operating a municipal plant is likely to greatly exceed the estimated cost. It also shows how almost impossible it is to get at the real cost of operation of municipal plants, because the officials who compile the reports "are advocates of a cause rather than disinterested compilers of statistics." And, lastly, the report gyes in detail the items which should be included to secure a true estimate of of the greatest enemies of man. It is municipal cost as compared with cona solemn scientifically ascertained fact tract prices. In some respects this is that he is one of the worst disseminators | the most important feature of the reof disease known, far surpassing the port, for it is the touchstone which enables even the inexpert to detect the es-Pads will kill many times more flies sentially misleading character of almost all municipal reports. It is only by ignoring some of these items that M. O. "experts" are able to make a showing of success and economy for municipal as compared with contract lighting.-

surveys the same landscapes, observes Has Had Enough. Spirit Lake, Iowa, recently voted by a good majority to sell or lease the electric plant which was presented to it a few days ago, because, as the town clerk

> "It certainly cannot be operated successfully under municipal ownership. It has never paid and never will." For the first eight months of 1907 the earnings were \$3,823, and the operating expenses were \$6,328. This means that the street arcs cost at the rate of something over \$350 a year, with no allowance for depreciation or lost taxes. Quite a showing for a plant that has no interest to pay.

Minard's Liniment Cures Colds, etc.

Inconsistency. "Gracious!" cried the night-singing tomeat, dodging the professor's boot lack, "how inconsistent you are!" "How am I inconsistent?" enquired the learned man.
