## **COW TESTING**

Dominion Department of Agriculture Branch of the Dairy and Cold Storage Commissioner.

Eden Bank, B. C., Association for May had the record for 241 cows of an average production of 917 lbs. milk, 3.7 test, herds some individual cows gave over himself all won the throne by 1,000 lbs, milk, while the three best single yields were 1,630 lbs., testing 3.2, lbs. milk, 3.4 test, 44 lbs. fat. Such animais must be a pleasure to handle, a the Queen of Sheba. source of pride and satisfaction, as well as of good cash profit.

the cows at Eden Bank, B. C., they would have given an additional weight of actually sixteen thousand pounds of milk ter fat during the one month! Are there not some more places where there are still some poor cows left? The poor cows are quickest detected by sys-

tematic weighing and testing. C. F. W. Ottawa, June 26, 1908 MODEL PLAYGROUNDS.

Chicago in the Lead, With One Park

That is Almost Utopian. The critics along the Atlantic coast of the people. The public school chilleagues and the general public are consports of all kinds.

Western cities in pushing the playgrounds propaganda; in fact, it is doubt ful if any Eastern city equals Chicago in this respect, says the Kansas City Journal. Sherman Park playground is considered a model, the highest and latest development in the world of the public recreation place for the people. It combines the scenic beauty of a minfor gymnastic and athletic purposes.

It also contains a series of buildings of solid construction and classically chaste design. Within these buildings are public assembly halls, small clubrooms, gymnasiums, shower baths, restaurant, reading rooms, and everything that the minds of the builders could devise for physical, mental and social culture. Sociologists have pronounced Sherman Park and its playgrounds system to be "well nigh per-

fection, almost utopian." This little earthly paradise was formerly as bleak and unattractive a spot as any that could be found in the ironbound tenement district of a large city. It has been converted into an ideal resort for tired, careworn people at a cost of \$150,000. The big ball field in the fall a football gridiorn-is flooded in winter and in a single night is converted into a skating pond. There are separate playfields, besides, for senior and junior boys, and another for women and children.

There is an immense swimming rool in the open air; around it is a border up later than usual he yawned, and his of white sand. Before a bather enters this pool he passes under a shower both. "Ah, Teddy, you are sleepy; you had Near by is another large pool for women and children. In short, Sherman "Why. I'm not a bit sleepy, replied Park is thoroughly equipped for the "I'm only siring my mouth, pleasure and uplift of the people in winter as well as in summer.

MARRIAGE AMONG FLOWERS.

Some Are Known as Deceivers and Others Are Coy and Shy. Plant and flower life, strange though

it seems, have various marriage customs. The wild arum has been described by botanists as a deceiver and murderer and the tulip as a coy lover Flowers entice insects into their service, marry them as it were, and thus propagate their species. A flower has a human way of first at-

tracting insects. There is secreted somewhere in the flower a tiny or large store of honey, as the case may be, to which the midge, the butterfly, the bee, the bluebottle, and other insects are attracted. Insects bear the pollen powder from one flower to another, the introduction of the pollen making the fertilization of the seeds possible.

All plants and flowers are so arranged, says the New York Tribune, that, while the insects they attract are drinking the sweet nectar, the pollen is either being scattered over their bodies to be taken to another plant or flower or the pollen already scattered on the insect is being swept off by the stigmas of the seed boxes. Plants and flowers which are white in color and highly scented attract moths and night flying

Flowers close their petals on dull days and jealously guard the pollen from rain. The pollen grains of the pine tree, which are spread by the wind, have small balloons attached to them. The wild arum described as a murderer secretes a honey that makes insects drunk. Botanists describe it as a successful is because it contains inwicked plant, declaring that it commits gredients which act directly upon murder in its love-making. Not content | the feminine organism, restoring it with this demoralization, it develops to a healthy normal condition. poisonous berries which the birds, hav- Women who are suffering from ing eaten, die and fall to the earth and I those distressing ills peculiar to their decay. NIGERIA FISHING TACKLE.

Natives of Nigeria are remarkably skilful anglers, and their manner of catching fish recommends itself alike

for simplicity and success. The fisherman grasps a small line weighted at the other end with a small stone, and at regular distances along the line he attaches a number of hooks made of animals' bones in the form of a narrow V, while to the angle of each V is fastened a short line made of sinews and baited with a kind of snail; the fish, swallowing the bait and line, swallows also the book, which is so acted upon by the tension of the line as to expand its two prongs and fasten them firmly in

the throat. The victim struggles and whirls about neighbors to swallow the same snare,-London Standard.

Dining Late and Long.

In Sir Algernon West's early days society often dined late and long, and the late Lord Clanwilliam once told him of one occasion when he dined at a friend's villa near Putney and the meal did not

begin until 8 o'clock. When they at last rose from the table and went to their rooms, Lord Clanwil liam flung open his window and saw the haymakers coming into the field. "I wonder," he thought, "what hour they begin work," and on consulting his watch he found it was 8.30. The haymakers were returning to work from their breakfast .- Tit-Bits.
