NAZIM PASHA IS KILLED

Turkish Government Overthrown and Cession of Adrianople Repudiated

A despatch from Constantinople says: A crisis in Turkish affairs came on Thursday with dramatic suddenness. The Grand Vizier, Kiamil Pasha, and the Ottoman Cabinet resigned, and Mahmud Shekfat Pasha, formerly Minister of War and commander of the constitutional army which enthroned Mehmed V. as Sultan, was appointed Grand Vizier. On Wednesday the Grand Council, representing the intellect and wealth of the nation, pronounced in favor of peace almost at any price. On Thursday a vast crowd drawn from all classes of the proletariat declared for war rather than peace without Adrianople. And because the crowd was backed by general public opinion the Government surrendered and relinquished office, making way for the same man whom the popular movement brought to the top after the revolutions of 1908 and 1909.

TORONTO CORRESPONDENCE

INTERESTING BITS OF GOSSIP FROM THE QUEEN CITY.

Is the Water Supply in Doubt?—Hydro Electric System on the Defensive—Miss Booth at Massey Hall.

The city has been agitated by the remarkable question of whether water will run down hill. The question arises out of the plans for a new water works system to cost over six million dollars, the money for which was voted by the ratepayers on New Year's Day. At present Toronto's water supply comes through a pipe extending from the lake from the island and lying more or less unprotected on the lake bottom under extreme weather and ice conditions. From the island the water is pumped to the city by means of a tunnel under the bay. Under this system there is a danger of destruction to the intake pipes and also more or less remote danger of pollution getting into the tunnel under the sewage filter bay.

One Doubting Expert.
This is brief was the plan recommended by four engineering experts who collected made to run down hill to the reservoir with sufficient pressure to maintain a grade of one foot in one hundred for the city. This remarkable statement has been greeted with mingled surprise and indignation. It is the first time that the Hydro Electric Commission has been called in question. However, learned professors have been asked to give evidence as to whether they admit it, after all, a complicated one. The consensus of opinion here is that the Hydro Electric Commission should be able to bring the water from the heights of Scarborough into the city some way or other, and there should be no doubt as to the possibility of making the scheme practicable.

An Attack on the Hydro.
No little interest has been expressed on the attack made by a New York committee of five on the Hydro Electric Commission by the New York State legislature. With the exception of the attacks made by the real competing companies, this is the first criticism of Ontario's public ownership scheme. The New York State committee has been critical of the Hydro Electric Commission, and has estimated that the Hydro Electric Commission has lost as much as \$500,000 a year. They assert that the small municipalities are being treated as second-class. They also point out that the Hydro Electric Commission has a large debt on account of the Hydro Electric Commission. They also point out that the Hydro Electric Commission has a large debt on account of the Hydro Electric Commission.

When the Discrepancies?
There are two reasons for the discrepancy between the New York State Committee's figures and those now given out by the Hydro Electric Commission. First, the Hydro Electric Commission's figures are based on a year's operation, while the New York State Committee's figures are based on a year's operation. Second, there is a difference of opinion as to what percentage ought to be allowed for depreciation of the plant.

A Tax Reform Campaign.
The fact that Mr. N. W. Rowell, leader of the Opposition, has been delivering a series of speeches on Tax Reform has caused some people to wonder if his platform of "abolishing the bar" is to be relegated to a mere interesting session of the legislature, though it may not be so momentous as far as actual legislation is concerned.

A Typical Revivalist.
"A little thing, but with the spirit of her father in her," was the way that Lieutenant Governor Sir John Gibson introduced Miss

Famous Berlin Doctor Has Placed It At the Disposal of Minister of the Interior

A despatch from Berlin, Germany, says: Dr. Friedmann—indignant over the fact of certain physicians declaring they are in possession of his tuberculosis serum, which he declares what they have is ineffective or positively harmful—placed his remedy at the disposal of the Minister of the Interior on Thursday. One prominent Berlin physician attempted to get Friedmann's bacilli from the body of a man who had been inoculated by Friedmann, and asserts he succeeded. Others secured cultures

CLAY BELT NOT ALL GOOD

Prof. Fernow's Warning in an Address Before the Conservation Commission

A despatch from Ottawa says: That there is a widespread misconception that the whole of the clay belt of Northern Ontario is fit for farming was stated on Wednesday morning by Professor B. E. Fernow, dean of the Faculty of Forestry in the University of Toronto, during an address at the annual meeting of the Conservation Commission. The chemical analysis of eighteen of the more promising soils, he announced, shows several of them to be unproductive, and but one up to the standard of a good virgin soil. Though these facts may hold true and the timber conditions of the country may be disappointing, yet, stated Dr. Fernow, the outlook for agricultural development is undoubtedly bright, but too sanguine expectations are being entertained and should be guarded against. In some respects the removal of timber from sections of the country in northern Ontario may have a good effect, but in many cases the effect will be the reverse. An intelligent direction of colonization is needed, says Dr. Fernow.

It takes from \$30 to \$50, and even up to \$75, per acre to prepare this land for farming, and therefore it is not cheap land. So far, besides root crops, potatoes, etc., only hay and oats may be expected to yield good returns. The southern slope of the clay belt, however, offers better conditions. Many settlers will be misled into taking up unsuitable lands.

Dr. Fernow recommended that it would be well for the Provincial Government to investigate the land in question thoroughly and establish an experimental farm there by which both the agricultural and tree-growing possibilities could be thoroughly well tested.

They Do Not Agree.
A despatch from Toronto says: Hon. Jas. Duff, Minister of Agriculture, and Mr. Aubrey White, Deputy Minister of Lands, Forests and Mines, have taken exception to the statements of Professor Fernow regarding the unfitness of parts of the northern Ontario clay belt for farming.

"Rot!" said Mr. White, when spoken to Thursday. "Professor Fernow was up in that part of the country only five or six days, and probably all the country he saw was that along the line of railway from a hand-car. From that he goes ahead and pronounces judgment on 20,000,000 acres."

Hon. Mr. Duff said: "Professor Fernow's remarks appear to have conveyed an entirely erroneous impression. He refers to 18 samples which were analyzed. As far as I am aware the only 18 samples which have been analyzed were samples of Abitibi soils analyzed by Prof. H. A. Court of the chemistry department of the Ontario Agricultural College in 1905 and 1906, the results of which are given in the college report of 1906. Whatever may be said as to the value or limitation of chemical soil analysis, and they have both, it will be admitted that experience is the true and final test. Since that time there has been a great development in the north country, and the crop returns from New Liskeard, Matheson, Monteith, Charlton, Englehart and other districts prove conclusively the fertility of the soil."
