CHARLIE PALMER IS FAMOU IN ALASKA.

University Training Failed, But Grit Won.

When Charlie Palmer, a strapping young Englishman of family, wealth and position, was graduated from Oxford University no doubt he dreamed of achievement, but it is safe to say that he had no idea of winning renown, wealth, success by toting giant powder up a steep mountain trail. Yet that his boast the way it came about.

CHEAPER FENCE-POSTS

Preservatives Prolong Life of Poorest Woods.

As a result of the many inquiries in regard to the preservative treatment of fence-posts, the Forestry Branch, Ottawa, has now issued a circular on this subject which can be had by applying to the Director of Forestry. The various methods described of treating the posts with the preservatives are all illustrated by diagrams, and the apparatus required is simple and costs little.

The great advantage of these cheap woods free from decay for with him. Quick as a flash, he kinds of wood found in farmers' caught hold of his coat with his woodlots will last, when used as sharp teeth, and with one wrench, posts, only four years or there- not only tore it off his back, but abouts; after treatment, such as took a large piece of the shirt with described, they last twice or three it. THE MILKY WAY.

Galactic Phenomenon Is Composed of Suns in Millions.

The Milky Way, or Galaxy, is an apparent ring extending entirely around the universe of stars visible in the largest telescope. It is composed of suns in literal millions. They are so remote that, as seen from the earth, they appear to be close to each other, while in reality they are separated by millions and billions of miles, writes Edgar Lucien Larkin in The National Maga-

To the eye, the belt of soft light looks like a continuous band of cloth of pearl, but telescopes have the effect of bringing objects nearer. This separates the filmy cloud into many millions of glittering but minute points on the black back ground of space. At a distance, forest trees seem to be close to gether, but as they are approached they separate and stand alone.

It is next to impossible to describe the matchless heauty of the Milky Way as seen in a telescope of great power. Carpet a large room with black velvet. Have many electric lights in the ceiling. Throw down and scatter all over the black floor a bushel of minute diamonds, rubies, pearls, sapphires, opals, amethysts and other gems. Then turn on the light. You would have a faint imitation of the supernal glories of the Galactic hosts. the appalling depths of space look black in our great telescopes.

In places, the suns look by perspective as though they were arranged in piles, heaps and banks, or built up into colossal windows. or twisted into spirals, or dashed into wisps and cosmic spray.

In some places the concentration on is so great and dense that only the most powerful telescopes on earth Reid Bros., Bothwell, Ont. can magnify enough to bring out details.
