HOW TO TEST WATER.

Two Simple Ways of Knowing Whether It Is Pure.

Every one knows and admits the necessity for pure water. When you are away from home, and are not sure of the character of the water supply, it would not be a bad idea to make a few simple tests. The results may prove that it was decidedly worth while to take the trouble. Here are two tests that you can make very easily Fill a tumbler with water, drop

in a lump of white sugar, cover it with a saucer, and let it stand overnight on the bricks at the side of A horse dealer was trying to sell the range, on the kitchen mantel- a horse afflicted with heaves, and piece, or, in fact, anywhere where said to the prospective buyer: the temperature will not sink be- "Hasn't he a fine coat! Isn't he a low sixty degrees. If next morning dandy?" the contents are clear, the water is pure. If, on the other hand, the like his pants. liquid is cloudy, some source of Burse Sense Defined. contamination is indisputably

The second test is to drop a few man. grains of permanganate of potash into a tumbler of water, cover, and let it stand for an hour. // If the water is still of the bright rosy color to which the chemical turned it. it is perfectly safe for drinking; if it is of a brownish color, it is impure. although the impurity may be of the kind that boiling will rob of its power to harm.
