

## A WOMAN'S RIGHT TO HEALTH

### No Reason Why They Should Suffer From Backaches and Headaches

To every woman belongs the right to enjoy a healthy, active, happy life; yet nine out of ten suffer, often in silence, from splitting headaches, torturing backaches, violent heart palpitation or some other of the many evils that follows anaemia, or bloodlessness.

That is why one sees so many women with pale, thin cheeks, dull eyes and drooping figures—sure signs that the blood is out of order. All suffering women should win the right to be well by refreshing their weary bodies with the new, rich blood of health that promptly transforms them into healthy, attractive women. There is no other medicine can supply this new, rich blood so speedily and so surely as Dr. Williams' Pink Pills for Pale People. Through this medicine thousands of tired, suffering women have found new health and strength. Mrs. James Drost, Chapman, N.B., says: "For years I did not know what it was to be entirely free from headache or backache. My hands were cold and clumsy all the time. It was difficult for me to get my work done, and to walk even a short distance would leave me completely worn out. My life was one of constant worry, and I thought I would never be better. I was doctoring all the time, but without a bit of benefit, and finally the doctor stopped giving me medicine, as he said he could not help me. Do you wonder that I was in despair. My mother urged me to take Dr. Williams' Pink Pills, but I said 'what's the use; medicine can't help me.' However, my husband gave six boxes of the pills, and to please him I began to take them. By the time I had finished them I undoubtedly had improved, and there was the signs of returning health in my cheeks and hands. My husband thought the improvement so great that he got another half-dozen boxes, and before these were completed I was enjoying such good health that I had not had in years; in fact, I was a well woman and have since enjoyed the best health. I sincerely feel that I owe my life to Dr. Williams' Pink Pills, and shall always recommend them to all sick people."

You can get these pills at any medicine dealers, or they will be sent by mail, postpaid, at 50 cents a box or six boxes for \$2.50 by writing The Dr. Williams' Medicine Co., Brockville, Ont.

#### On a Clear Footing.

An Irishman who occupied a small cottage in the North of Ireland was in arrears of 30s. of rent with his landlord. His landlord, seeing no possible chance of getting his money, went to Pat one day and offered to throw off one half the amount so as to encourage him to pay the other half. "Well," said Pat, "since you are so good as to throw off the half I never saw the day I would take anything off any man for nothing, and to let you see that I am as good a man as you'll throw off the other half, and that will leave us on a clear footing."

#### To Soon.

George Goldfellow was dining with his best girl, who had just given one of her prettiest nods to a young man who came in and sat down at a table opposite. "That's a nice-looking young fellow. Is he a friend of yours?" "Yes, indeed; I know him well," laughed the maiden. "Shall I ask him to join us?" asked George, anxious to display his goodness of nature. "O George!" said the girl, blushing; "this is so sudden, so sudden! What do you mean?" he asked in surprise. "Why—why, that's our round minister."

#### Minard's Liniment Cures Distemper.

"Say, you sold me a parrot and you said it would repeat every word it heard. Well, I can't get a word out of it." "I must have forgotten to tell you it was deaf."

## Would You Like Hair Like This

Cuticura Soap Will Help You

Realize this ambition, when assisted by Cuticura Ointment, by keeping your scalp clean and free from dandruff, itching and irritation.

Samples Free by Mail.

Cuticura Soap and Ointment sold throughout the country. Editorial sample of each mailed free, with 32c. postage. Address: Cuticura, Dept. R, Boston, U.S.A.

## Queer Kinds of Bread

Strange as it may seem, there is a sort of bread made from sawdust, the product of German ingenuity. The sawdust is first subjected to a process of fermentation and various chemical manipulations. Eventually it is mixed with one-third part of rye flour, formed into loaves and baked in ovens like any other bread. This bread is not intended for human consumption, but is for horses only, although some authorities contend that pain de bois, as it is called by the French, who have investigated its merits, offers a nutritious and highly satisfactory food for human beings.

In various parts of the world, bread is obtained from trees. For instance, in the Molucca Islands the starchy pith of the sago palm furnishes a white floury meal, which is made into flat, oblong loaves and baked in curious little ovens divided into small oblong cells just big enough to receive the loaves.

Railroads in Southern Russia are preserving their ties by soaking a box of Dr. Hamilton's Pills. She placed reliance upon them and now that they have made me a well woman I would not be without them whatever they might cost. I found Dr. Hamilton's Pill by their mild yet searching action very suitable to the delicate character of a woman's nature. They never once gripped me, yet they established regularity. My appetite grew keen, my blood red and my heavy rings under my eyes disappeared and to-day my skin is as clear and un wrinkled as when I was a girl. Dr. Hamilton's Pill did it all."

An electric machine that works automatically has been invented for stuffing sausages.

Folded paper drinking cups, bound together like a cheque book, are a novelty for travellers.

For cleaning bath tubs there has been invented a flat metal handle to be covered with toweling.

A floating buoy made of concrete is used for mooring vessels in the harbor of Kingston, Jamaica.

Traps have been invented to catch flies at their breeding places before they become old enough to move away.

My appetite grew keen, my blood red and my heavy rings under my eyes disappeared and to-day my skin is as clear and un wrinkled as when I was a girl. Dr. Hamilton's Pill did it all."

The above straightforward letter from Mrs. J. Y. Todd, wife a well-known miller in Rogersville, is proof sufficient that Dr. Hamilton's Pill are a wonderful woman's medicine. No other pill but Dr. Hamilton's, 25c. per box. All dealers or The Catarrh Zone, Co., Kingston, Ontario.

These June Brides.

"Ma'am, here's a man at the door with a parcel for you."

"What is it, Bridget?"

"It's a fish, ma'am, and it's marked C.O.D."

"Then make the man take it straight back to the dealer. I ordered trout."

\* \* \*

A drinking fountain from which the water bubbles upward which may be fastened to an ordinary faucet has been patented.

There are more than 85,000 sheep in Australia and nearly 25,000,000 in New Zealand, or more than eighteen for each resident.

A wire lemon-juice extractor has been invented that resembles the familiar glass one with the advantage of being unbreakable.

The California Indians collect the pollen of cat-tails in large quantities by beating it off the plants and catching it in blankets. They make bread of it, but as a real delicacy they prefer bread of "grasshopper flour."

The Indians of the Sierra country employ their own method of transforming the bitter kernel of the acorn into a kind of bread that is said to be extremely palatable. The process is as follows: There is cracked and ground in the usual manner a large mass of acorn meat.

A number of circular vats are hollowed out of the black soil in the shape of a punch bowl. Into these is placed the acorn pulp. At hand stand several large clothes baskets filled with water.

Into these baskets are dropped the hot stones whereby the water is heated. Upon the mass of crushed acorn meat, the Indians ladle the hot water until it is about the color and consistency of cream. Not a speck appears. A strong squaw stands by each vat and with a small fan blows the mass, skillfully removing any speck that may appear upon the surface.

The soil gradually absorbs the bitter waters, leaving a firm white substance. This the Indians remove so adroitly that only a small portion adheres to the soil. They spread it upon rocks to dry and afterwards mix it with water, pat it into thin cakes, and bake, before the fire.

The preparation of bread in sheets hardly thicker than sheets of paper is a real art among the women of the Moki Indians of our Western deserts.

A corner of the principal room of the Indian habitation is set aside for the accommodation of a shallow trough, walled in with slabs of stone set on end. The trough is divided into three compartments, and in these the first process of breadmaking occurs.

When bread is to be made a squat kneel behind each compartment, she then places the flat stone in the first compartment, and with a coarse, oblong stone, the first woman proceeds to rub it. The coarse meal thus prepared is passed on to the next compartment with a stone less coarse, and passed on to the third stage. The result is a decidedly floury meal.

With a brush, which is made of dried bristles bound together with a string of calico, the meal is then gathered up and mixed with water, until it becomes a thick batter.

She takes the bread by a corner and pulls it off, dexterously turning the other side up. When it is done a long, flat basket receives it, and the baker turns the edges up all around, so that the air can get at it. Sheet after sheet is baked until the basket is piled high with the blue bread, or "piki," which the baker pronounces "pika."

No salt is used in the batter, and the piki has a sweetish taste. It is usually blue, partaking of the color of the corn from which it is made. It is eaten dry or in a sort of soup. When the men go on a journey they take piki made into rolls, very much as one would roll up a sheet of wet paper, the bread being of the same thickness as the paper.

The stones upon which the bread is baked are prepared by the old women of the tribe with great secrecy and much ceremony. They are very valuable and are handed down as heirlooms from mother to daughter.

Knows When to Quit.

What sort of a speech does he make?"

"A lazy worker's speech."

"I don't get you."

"He always knows when its quitting time."

## NOTES OF SCIENCE

Three out of every four German nonagenarians are women.

Sheepskin is used as a substitute for almost every other kind of leather.

An electric machine that works automatically has been invented for stuffing sausages.

Folded paper drinking cups, bound together like a cheque book, are a novelty for travellers.

For cleaning bath tubs there has been invented a flat metal handle to be covered with toweling.

A floating buoy made of concrete is used for mooring vessels in the harbor of Kingston, Jamaica.

Traps have been invented to catch flies at their breeding places before they become old enough to move away.

Railroads in Southern Russia are preserving their ties by soaking a box of Dr. Hamilton's Pills. Colonel David Laidlaw is to command the 2nd Civic Battalion in Glasgow.

The Edinburgh Academical Football Club has cancelled all fixtures for the coming season.

Since the outbreak of the war there have been practically 20,000 recruits enrolled in Glasgow.

Arthur King, a recruit from Coalbridge, was killed by falling over the walls of Stirling Castle.

The War Office has taken over the Marine Gardens, Portobello, for the housing of Territorials.

Kilmarnock special constables are to have a day set apart for themselves for practice at the shooting range.

Mr. John Hutchinson, the oldest representative of the building trade in Dunfermline, has just died in his 79th year.

From all the coal-mining centres the demand for pit-props has become urgent. Steel substitutes are being suggested.

The Chamber of Commerce battalion of the Highland Light Infantry, left Glasgow for camp amidst scenes of enthusiasm.

The death has occurred at Dundee of Mr. John Campbell Smith, ex-Sheriff-Substitute of Forfarshire, at the age of 80 years.

A seven-year-old boy named Alexander McLeish of Glasgow wandered onto the railway at Whiteinch and was killed by a train.

Mr. George A. Clark Hutchison of Eriska, Unionist candidate for Argyll, has given his yacht, Ariana, to the Government for patrol work.

Mr. William Muir, wife of Countess Muir, Edinburgh, and her two children were seriously injured in a runaway accident at Bo'ness.

The death is announced, in his 80th year, of Mr. William Paton Mains, of Ailes, one of the leading Wigtonshire agriculturists.

Mr. Harvey Weeding Hall, Polmont, has furnished and equipped a recreation and reading room for the use of Territorials at Grange-mill.

The two sections are much too heavy to be drawn by horses, and so the Germans haul them with gasoline tractors, and use the Diplock wheel construction to support the excessive weight of the gun. The Diplock wheel, or pedrail, is not a new invention. It has been used to carry great loads over soft ground for many years, and resembles the caterpillar form of traction that is often used on excavators and engineering vehicles that must move across uneven ground.

The great gun is reinforced with a heavy jacket of hardened steel that measures eleven feet in length, and it has to be carried on a specially designed bed. The gun is moved in two separate pieces to the firing line, where the carriage that contains the firing platform and compressed-air recoil brake is first put in position. The truck that carries the gun itself is then moved up from the rear. The gun is pulled from that truck to the firing platform, and adjusted to the recoil brake. The spare wheels are then drawn back, and the arm is ready to fire.
