GREEN FEED IN WINTER.

Green feeds for poultry contain only a small percentage of actual food nutrients, but are important because of their succulence and bulk, which lighten the grain rations and assist in keeping the birds in good condition. The poultryman should secure a sufficient supply of such feeds to last through the winter months in sections where growing green feeds can not be obtained. When chickens are fattened without the use of milk, green feed helps to keep them in good condition.

Cabbage, mangel wurzels, clover, alfalfa, and sprouted oats are the green feeds commonly used during the winter. Cabbages do not keep as well in ordinary cellars as mangel wurzels. so where both of these feeds are available the cabbages are fed first. They are often suspended, while the mangel wurzels are split and stuck on a nail on the wall of the pen. Clover and alfalfa may be fed as hay, cut into one-half to 1 inch lengths, or may be bought in the form of meal. Alfalfa meal has a feeding analysis equal to bran, but is not as digestible on account of its larger percentage of fibre slightly immature, if they are to be cured and fed to poultry. The leaves and chaff from such hay are especially adapted for poultry feeding.

Our Abounding Privilege ..

We Are Called Into the Lord's Presence to Be Guests at His Bountiful Table.

"Abide in Me."-John xv., 4.

We are called by the Lord into a inconceivable intimacy. We are not to be vagrants who sleep upon a new doorstep every night, and who only occasionally return to an old restingplace. We are not even to be visitors upon the Lord, turning aside now and again for a brief sojourn, and then away into forgetfulness again. "She had the Lord on her visiting list!" No, not that! We are to settle down with the Lord, to rest in Him, to abide in Him, to make Him our eternal dwelling place. We are to be home in the Lord.
