Nannie Goat. "Yes," continued her father. "Two little goats with wonderfully good noses, who could smell a piece of cake

about two miles off. "One of the little goats had a mother who used to make cake for her. and she never, never refused to give the little goat some of the cake which she had baked.

"One day, what do you think happened?"

"I cannot imagine," said Nannte Goat, all aglow with curiosity. "Well," said Billy Bumpus, looking

very crafty and stroking his whiskers, "the two little goats smelled the cake which one of the little goat's mother had made and both of them waited until the cake was done and rad been set out on the kitchen window shelf to cool, and then-"

"I know the rest of the story," said Nannie Goat, sitting bolt upright in

"So does another little goat friend of yours, Miss Jemina Goat." Then he added, "I think both of you ought to have a spanking."

"I think so, too," said Nannie Goat. "but before you spank me I really would like to tell mother how good that cake was. I think it is wonderful that you selected such a good cook for a wife. The cake was delicious. You know good cooks are scarce nowadays."

"You are a dear, sweet daughter," said Billy Bumpus, as he gave Nannie a great big hug.

"I'm ready for you to spank me," answered Nannie as she turned over. "I guess not to-night," said her father, the tears coming into his eyes. "But it is always a better plan to ask for things first than to be found out afterward, as you cannot fool anybody but yourself."

"Then, Daddy, will you give me another piece?"

"Of course! Of course, my dear," replied Billy, as he scooted downstairs and into the panty where he found Mrs. Bumpus.

"I guess our dear daughter has learned a lesson," he said, as he kissed piece of cake?"

smile, "and so may her father."

Made of Native Fibre and Pronounced bust. Price, 20 cents. Bullet, Nail and Glass Proof.

A new kind of automobile tire-"the homing"-has appeared in Australia. It is made of a native fibre. The need that gave rise to its contrivance, how it is made, and how used, are described in the Weekly Builetin, Canadian Department of Trade and Commerce, as follows:

"As in other countries of vast distances and comparatively few travelling facilities, the advent of the motor car in Australia has, to a very considerable extent, solved the difficulties of transportation. In many parts of the country the roads are merely bush tracks or overland stock routes, on which herds of cattle are driven long distances to the city markets or coastal freezing works.

"The rough nature of the country over which the cars travel and the excessive heat often experienced have made the cost of rubber tires a serious item in maintenance, thereby causing many experiments to obtain a substitute for rubber at a moderate cost. The invention and recent perfection of the Australian 'homing' tire is claimed to have solved the problem of producing an emergency tire at a comparatively small cost. Tests with tires made of various kinds of fibre were made, with the result that coir fibre was found to be the most suitable for the purpose because of its lightness, cheapness, resilience, and durability. The greatest difficulty was to discover a method of joining the ends of the rope to make a complete circle of the same size, but eventually a new splice was invented, and the tire as now sold

in Australia is perfect of its type. "When first placed on the market! the 'homing' fire was sold as an emergency tire in case of a puncture or blow-out, but it proved so satisfactory that in the country districts of some of the States the rope tires are frequently used on all the wheels of motor cars, particularly for station or ranch work and over rough and stony

courtry. "The tires are bullet, nail, and glass proof, and if a speed of sixteen miles is not exceeded it is claimed that they are almost as soft riding as pneumatic tires. It should be understood that the 'homing' tire takes the place of both inner tube and cover, being attached to the rim by four or five straps."

In Siam the musical scale is an equal division of the octave into seven parts and music never is written, but learned by ear and handed down traditionally.

The Business of Being books alone. The best food for growing youngsters is years. Price, 15 cents. FREEZING OF WATER PIPES.

A Solution Has Been Discovered to Prevent It.

A mixture which is declared to have proven successful in preventing water pipes from freezing is described by Thomas W. Benson as follows:

"To a solution of thin boiled starch

add sawdust until the mixture forms a thick paste. A fine sieve may be used to clear this sawdust from lumps. "Heavy cord is first wrapped around the pipe, spacing the turns about onehalf inch. A one-fourth inch layer of the mixture is smeared on and allowed to dry; then a second layer is put on and smoothed up. The string acts as an anchor to make the coating adhere to the pipe closely. Whitewash or paint may be used to give a finish clothes.' for inside pipes, but for outside work cover the coating with hot tar. If it is desired to have a very neat covering wrap the sawdust coating with cloth or canvas, applying it in narrow strips like a bandage."

How a Boys' School Learned to Live Up To Their Motto.

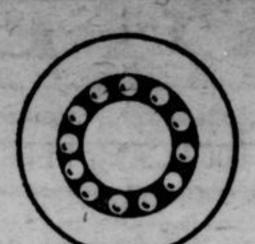

In the hills of northern Georgia the Berry School for Boys believes in doing whatever needs to be done. Its motto is, "Be a lifter, not a leaner." ideals that it maintains were not attained without a struggle. In The Men of the Mountains, Mr. Arthur W. Spaulding tells the story of one of the first crises in the history of the

The mountain boy was ready to plough in the fields, chop in the woods, hammer on the house; he was not wholly off his ground in milking the cows, cooking his food and making his bed; but there were some things required of him that were too obviously woman's work. The first Monday Miss Berry summoned her young guard of mountaineers for their first lesson in laundering. The laundry was a washtub out under a tree.

"Now, boys," said Miss Berry, "we are going to wash clothes. I will show you how. Then each boy is to wash his own garments." There was silence, an electric si

lence, while the mountaineers considered. Then their spokesman, a tall, strapping young fellow, said, "No, ma'am! I ain't never seen no man do no washin', and what's more, I ain't goin' to do it."
