made was at first low, but it rose
higher and higher and then dropped

31,590,000 pounds, with a per capita consumption of 11.34 pounds. This was
increased in the 1916-1917 crop to 1,831,590,000 pounds, with a per capita
consumption of 17.33 pounds. The

"When the note gets to about B flat," said the sergeant, "you may know it's soon going to fall, and as soon as it has touched the ground the shell bursts and tears a big hole up."

Ay, there's a good lot of casualties of consumption of 17.33 pounds. The large increase in consumption during the past year undoubtedly has direct relation to the high price of potatoes and wheat. The rice crop of India for the past year showed an increase of 1,255,000 tons.

Obviously, there would be no conventional impropriety in painting a portrait of Wilhelm the Wicked in a square halo. His Plutonic prototype would naturally wear a round one.

Wasps prey on other insects which they use as food for their leaves.

Directly afterward they were at him again. But he was out of range and got away. "Archie" is "the very devil"-where the gunners get plenty of practice! ---How to Tell Age of a Fish

Could you tell the age of a fish if asked to do so? It has been found that the age of a

fish may be read from its scales. These increase in size by annular growths, two rings being formed each year. The "otoliths," or ear stones, which lie in two saes on either side of the base of the cranial cavity, afford another means of determination.

Like the scales, the otoliths increase by two rings annually. Each spring a white ring is formed and each autumn a black one. Thus the number of either white or black rings in an otolith gives the age of the fish in years. In the case of flatfish the latter method has been found more rehable, whereas in the case of the cod the scales give a better result. Although varying much in size and shape in different species, the otoliths show a remarkably constancy in the same species; hence they are of considerable value in the diagnosis of a

Power is powerless unless its possessor is conscious of his ability.

An envelope closed with the white of an egg cannot be opened by the steam of boiling water, as the steam only adds to its firmness.
