BREAKDOWN OF HUN AIR SERVICE

WAS APPARENT LONG BEFORE THE ARMISTICE.

Morale Crumbled More Quickly Than in Any Other Section of Military Enterprise.

Long before the war came to its sudden end there was plenty of evidence that the German air service was going to pieces, as much through the faulty construction of their machines and lack of material, and much of it bad at that as the difficulty of maintaining an efficient personnel. It would seem, from information that I have been able to obtain from the best possible source, that morale in the Gerservice began to crumble much more rapidly than their army moral generally, after the first appeal for an armistice. This was perhaps natural, having regard to two important factors. First there was the deadly influence in aerial work of any shortage or deterioration in equipment and raw materials of construction, and, secondly, there was the fact that in an air service the standard of is exceptionally high, because so very pleats from under the yoke, and a light. On his forehead was a dismuch depends upon individual initia- convertible collar. McCall Pattern figurement, says this English writer, who had been stolen and sold to the few moments—a delightful surprise such as carrots, seem to resent it.

Several German prisoners interro- fer Design No. 912. Price, 15 cents. gated on one day gave interesting evidence on various points about the German air service. The losses due to bad landings, for example, were described as very heavy, especially in training centres. A mechanic who was at the Second Pursuit Flight School for six months during 1918 stated that in ten weeks 243 crashed machines. were sent to Germany from this school only, and that during the six months he was there the average number of crashes per day was eight.

Shortage of Pilots.

Some four months ago there was a dangerous shortage in Germany of pilots for scout machines, and pilots were compulsorily transferred to pursuit flights from other types of units, or if coming from training squadrons were not allowed to go to two seaters. In this connection it may be noted that pilots formerly always volunteered for scout units.

The situation is said to have arisen from the fact that reports of enormous casualties in pursuit flights had been circulating in the German air service, whereas previously they had been considered yery "safe" units, and had even been dubbed "life insurance companies."

There was also a marked shortage of certain types of machines. With regard to personnel, an attempt was made to meet the shortage by compulsorily transferring Zeppelin mechanics | Price, 20 cents each, to the aeroplane service for training and employment as pilots.

The shortage of petrol, already reported by prisoners in reconnaissance ronto, Dept. W. and battle flights, had also been felt in pursuit units. Pursuit flights in the Sixth German Army were allowed to fly for an hour only every other day, and pilots were not permitted to carry out independent patrols.

To sum up, there was shortage of machines, men and petrol, while the continuance of bad landings, especially at training centres, suggests that sompetent pilots were growing fewer and that training was quite inadequate. These conditions will inevitably affect Germany's post-war status in aerotime aviation at the zenith of their sugar. Well, it will pay. war time strength and efficiency.

---MODEL VILLAGE IN LONDON

British Government Intends to Build One in Capital.

What is the type of house that the Britfish Government regards as ideal? According to official details of the Local Government Board's housing scheme, which is now published, the following are the principal requirements suggested :-12 houses per acre in urban areas.

8 in rural districts. Maximum of sun in living and

working rooms. Minimum of sun for larders and

stores. Comfortable living room, 3 bedrooms, washhouse and bathroom or

bath.

Standarized essential fittings, such as doors, windows, ranges, baths. bolts, locks, door handles, etc. A good garden.

In view of the present famine in houses, the official announcement that a model village is to be erected in London is particularly timely. This village, the exact site of which is not specified, will embrace all the essentials mentioned above. The work of erecting the first houses will, it is expected, be commenceed almost immediately, and developed as fast as the schemes are approved.

When a woman sweeps she should stand erect, with her head up and her mouth closed.

Justice is merciful when there are extenuating circumstances, but when there are none justice must be stern. -Lord Reading.
