hidden treasures and charm."

One cultivation a week is generally sufficient to keep the weeds down. Training a boy to say "No" at the right time is more important than teaching him to read Latin.

A MOTHER'S TRIALS o Little Folk, the summer sun is wan-

FOUND IN AFRICA Care of Home and Children Often Causes a Breakdown.

The woman at home, deep in household duties and the cares of motherhood, needs occasional help to keep her in good health. The demands upon a mother's health are many and severe. Her own health trials and her children's welfare exact heavy tolls, while hurried meals, broken rest and much indoor living tend to weaken her constitution. No wonder that simple and the cure at hand. When use of Dr. Williams' Pink Pills. These village inn.

is different from that of other feeds started and in others it is about to be and for that reason a number of live undertaken. By the latter part of stock owners refused to feed it, but October the campaign will, it is hoped, those who are aware what benefits be in operation throughout the world can be derived through the judicial and will have become the biggest thing feeding of molasses will soon find a of its kind ever attempted, having reconvenient method of feeding it, and will not be without it.

About three pounds a day is the average amount prescribed for cows. Horses are fed from 2 to 6 pounds per lines is proceeding rapidly. The child is having the best and most day according to the amount of energy or work required from them. Swine benefit on % pound per day per 100 lbs, of live weight. Calves are fed from 1/2 to 1 cupful per day.

A good molasses will please the animal and make it more fit for maximum production whether it be flesh or work. It will keep the bowels in good order and prevent ailments due to indigestion. It produces a sleek coat. A progressive live stock owner should always have some on hand. -Michigan Business Farming.

Save Some Seeds.

Every grower of vegetables should make an effort to select some specimen vegetable plant from the crop and mark it especially for seed purposes. In England and France it is a general practice among growers and small holders to save some seed. Seed taken from the best specimens will generally give a good percentage of yield the following year. Some species of vegetable will not produce seed in Canada as the seasons are too short and muturity cannot come to perfection, but carrot, parsnip, lettuce, peas, beans, raddish, squash, corn, marrow, pumpkin, onions, can be relied upon if the seed is selected from the first crown and not the latest seed vessels.
