> In Ontario in 1919, 19,000 acres were sown to sugar beets as compared with 18,000 in 1918. The total yield from this acreage was 178,000 tons, or about 91/4 tons per acre, worth \$1,780,000. In 1918, a total of 204.017 tons of

beets was used throughout the Doinion in the manufacture of sugar, the cost at the works being \$2,593,715 or \$12.22 per ton.

New Bank of England.

Progress is the keynote of the age. Even the ancient Bank of England is to be rebuilt, enlarged and adapted to meet the needs of modern financial transactions.

This ancient institution was established in 1691, and is the oldest national bank in Europe. The central part of the mein building was erected. in 1732, but the outer part, which is the portion now visible from the streets, dates from 1788.

Since the building spreads over some four acres of the most valuable real estate in London, it is probable that the contemplated improvements will tend toward height rather than W. G. Harding, he is a newspaper pro- to spreading out more teritory, but it is hoped that some fragment of the old structure will be preserved in its historic state.

There is something about the solid, black building, for nearly three centuries lying close to the ground, which is typical of the sound conservatism of the English people, their honesty and the tenecity with which they have built up and protected the interests of the country. It would be difficult, indeed, for even the most artfully deafgned modern structure to convey the impression of England's permanency and stability as does the famous old Bank of England

Fewer people would ask advice it they were compelled to take the advice they receive.
