Spirella 1st and Best

All Others Second

According to classification the world over

Miss Emery, travelling Manager for the Spirella Co., Niagara Falls, Canada, left Durham today after leaving their representative, Mrs J. C. Nichol, a full stock in all lines for 1922, who will show all ladies interested why Spirella Goods demand first place the world over. If you do not know their merit, call and a demonstration will be cheerfully given free. Their hygienic principles should govern, and with the knowledge of a trained corsetiere, you are sure to be properly suited and pleased.

MRS. J. C. NICHOL
District Representative, Durham

Custom chopping every day at McKechnie's Mills, Durham. Satisfaction guaranteed. Corn, mixed chops, oats and all kinds of feed for sale at current prices.

Warning to Fishermen

The statutes provide that trout fishing season opens on the first of May and that there shall be no Sunday fishing at any season; and further that the onus of proof of innocence rests on persons accused with violation of these laws. Any infraction of the fishery laws reported to the Durham Game and Protective Association will be summarily dealt with in accordance with the law.

By order
Game and Protection Association

Help Wanted

FLOWERS FROM SEED

Beauty and Fragrance for All at Very Small Cost.

Most Annuals May Be Sown Indoors For an Early Start—A Few Simple Remedies Suggested for Insect and Other Pests—Annuals May Be Transplanted.

(Contributed by Ontario Department of Agriculture, Toronto.)

Among the varieties that should be started early indoors are Petunias, Verbenas, Antirrhinum (Snapdragon), Penstemon glaziovides, Salvia, Ageratum, Centaurea gymnocarpa (Dusty Miller), Pyrethrum (Golden Feather), and Lobelia. The four kinds last named being of a dwarf habit of growth are very useful for planting around the edge of flower borders. The Lobelia does best in light soil and where it does not get too much sun. The first named varieties being of a taller habit of growth (one or two feet) are better suited for the centre of flower beds or borders. There are no summer decaying plants that can be raised from seed that will make a finer and more continuous display in the flower garden during summer than those named, if the seed is started early in a window, hot bed, or also indoors, and the plants given even ordinary care and attention. If sown out of doors in May they are very late in flowering. All the plants before named will also be found very useful for helping to fill up window and verandah boxes, rustic stands, and hanging baskets. Being of a perennial or lasting nature, many of them can also be successfully dug up in the autumn before frosts, and placed in pots or boxes for indoor decoration during early winter. These late in flowering, such as Ageratum, Snapdragon and Penstemon are especially useful for this purpose. Seed should be saved from the best types of all the plants named during the summer months for the next spring sowing. The Dusty Miller does not seed the first year, as a rule. A supply of cuttings may be obtained from most of the plants named, if the old plants are kept in a cool window during winter.

Tall Plants for Centre.
If a few tall plants for the centre, or at the back of a large border are required, plant a few seeds of the Ricinus (Castor Oil Bean). These may be planted about an inch deep in April, and transplanted singly into 3 or 3 1/2-inch flower pots when three or four leaves are started; or one bean may be put in the same sized flower pot mentioned, and the plants allowed to grow there until planted out in the garden about the second week in June. All of the seedling plants started early as suggested should be transplanted when from four to six leaves have developed. In good soil singly into 2 1/2 or 3-inch pots or be set about 1 1/2 inches apart in shallow, well drained boxes filled with good soil.

Some Annuals Suggested.
A few varieties of annuals such as Asters, Chinese Pinks, Phlox Drummondii, Zinnia, Balsams, Marigold, Coreopsis, Scabiosa, Calendula (pot Marigold), Mignonette, Schizanthus (Butterfly flower) and other varieties if needed, may be sown indoors early in April for early flowering or they may be sown out in the border about a second week in May for later flowering. A great many annuals such as Poppies, Nasturtiums, Ten Week Stock, Silene Armeria (Catchfly), Gysophila elegans, Nigella (Love in a Mist), Annual Larkspur, and other similar annuals do not transplant or succeed as well when sown indoors. It is best to sow these last named out of doors early in May where they are to grow. Sweet Alyssum and the Purple and White Candytufts are among the best dwarf edging annuals we have, and should also be sown out of doors early in May. Early sown Sweet Alyssum is often attacked by the small black flea beetle, that completely destroys the plants. Plants from seed sown later (end of May) are seldom attacked. The best remedy for this flea beetle is to spray the plants with a solution of Paris Green, made by first well mixing a small teaspoonful of Paris Green (or Arsenate of Lead) in a tablespoonful or two of cold water, then add water to make one gallon. Dusting the plants with Pyrethrum Powder, wood ashes or soot are also good remedies. Another good annual, especially for a hot, sunny position is Portulacca. The seed is best sown broadcast on finely raked soil, and the seed raked in very lightly. Thin the plants later on from four to six inches apart. If you have a dry, hot, sunny position where very few plants will grow, try some Portulacca. If a few early Nasturtium plants, or of any climbing annual are wanted for window or verandah boxes, put two or three seeds in soil in three-inch pots in April; they will transplant much better from pots than from boxes. Nasturtiums are one of the best annuals for window boxes. The seed may also be sown rather thickly in window boxes out of doors early in May, and the plants thinned to about six inches apart later on. All annuals may be transplanted to advantage singly into small pots.

This list of annuals given may be extended considerably, those mentioned are among the most satisfactory for the average flower grower.—The late Wm. Hunt, O. A. College, Guelph.

Manure.
Much of the fertilizing value of manure is lost when piled in the barnyard till spring. Plan to haul it out to the fields as made. There, when spread or piled in small heaps, the bulk of this valuable by-product is utilized by next season's crops.

THE HORSE AS A MOTOR

Old Dobbin Something More Than a Mere Machine.

He Is Largely a Self-feeder—Does Not Rust When Resting—Has Horse Sense—Keep an Annual Inventory—How to Select the Breeding Ram.

(Contributed by Ontario Department of Agriculture, Toronto.)

The horse is, and will continue to be, the principal farm motor for an indefinite period. There are approximately 1,500,000 horses in Canada, all of which are used as a source of motor power. One and a half million may not seem to be a large number, but if we were to place the horses in the Dominion head and tail in one long parade line, they would reach from Halifax to Vancouver. So there is some horse flesh left in Canada, notwithstanding statements to the contrary by people interested in the manufacture of mechanical motors.

About the Farm Horse.
The farm horse as a farm motor differs from the mechanical farm motor in that it is self feeding, self maintaining, self reproducing, and self controlling. These qualities give the horse a tremendous advantage over the mechanical devices used for field work on the farms and for haulage on the roads.

The Horse Largely a Self Feeder.
Self feeding means a lot. There is no carburetor on the horse; nor are spark plug required. Green grass, good clean hay and oats, the products of the fields in which the horse labors, produce the energy that keeps up the horse's body, and keeps him going as a motor while labor is being performed.

The Animal Motor a Reliable One.
Within the horse's body cavity there is a wonderful self maintaining motor. The heart, the lungs, and the digestive organs make an engine combining the best of light, and makes his own repairs. Furthermore, the horse motor develops pep, or places in reserve energizing substances that may be used on demand. The mechanical motor when at rest does not improve nor grow stronger as does the horse, but frequently wastes or rusts. The high cost of gasoline, oil and motor mechanic service, together with the too frequent neglect that is accorded tractors on many farms, has reacted to the advantage of the faithful horse.

Old Dobbin Has Horse Sense.
Old Dobbin is also possessed of horse sense. No mechanical motor yet devised has possessed this function. Fuel for the horse motor is grown on the farm, and all profits remain on the farm. There is no tax on it either.—Lionel Stevenson, Secretary Dept. of Agriculture, Toronto.

ANNUAL INVENTORY.
Keep a Record of What You Own and What It Is Worth.
The man on the land can learn much about his own farming operations by taking an inventory each year. No form of record will give so much information about the year's work as will an inventory properly taken at a definitely fixed date each year. The usual time for taking an inventory of the farm business is in March, when there is least feed and unsold produce on hand. The inventory of an ordinary farm can be taken in a half day, so there is no excuse on account of shortage of time. The information gleaned about the farm business through the study made possible by inventory taking is worth many times the expenditure of time and effort.

For convenience in keeping the farm inventory any blank record book with pages wide enough to permit spacing for a number of columns can be used. It is better to accommodate the entries for a number of years so much the better.—L. Stevenson, Secretary, Dept. of Agriculture, Toronto.

How to Select the Breeding Ram.
Select a ram that possesses scale, but not to the extent that he is lacking in quality. A well-developed ram as a rule transmits these characteristics to his offspring. He should be masculine in appearance, which is indicated by the carriage and boldness of head, short face, good width between the eyes, large open nostrils and an absence of feminine characters in general.
A ram should show good strength of back and depth of body, especially through the chest, with good width between fore legs and well sprung ribs. He should be closely made, that is, good depth, width of body, and short on legs.
The fleece should also be considered as to density, fineness and freedom from black fibres, with a skin that is pink in color, indicating that he is in good condition.
Purchase a pure-bred ram if possible, as blood will count and marked results will be seen in the quality of lambs. Breed character should be considered as it is very important, more especially in pure-bred flocks. Prices are relatively low and it pays to buy the best.

Head lettuce requires cool moist weather to head well. The loose leaf sorts are best for warm weather. Prepare orchards for spraying for pruning and scraping off loose bark. Be sure that all seed corn and root seeds are secured from the best sources available, and are in ample quantities for spring seeding.
