The Raising of Matriculation Standards

The first year classes at the University have been greatly overcrowded the past three years. This has tremendously boosted the cost of maintaining the University. A large proportion of the students entering are Junior Matriculants who should really spend a year longer at High School. In some of the specialized courses they would save a year at University by taking their senior matriculation at High School. The extra year at University costs the province a lot of money, to say nothing of the big expense it means to each pupil to live in the city for one year. It was with a view to remedying this high-costing practice that the Education Department proposes to raise the standard for matriculation. The proposal has been widely approved by educational authorities. Recently some municipal council got the idea that raising matriculation standard was hitting "the poor man" and started a petition against raising the matriculation standard. On the face of it the idea sounds plausible but it will not stand looking into. The facts as above outlined point in the opposite direction. Some municipal councils who know little or nothing about the matter, grasped at the idea of being the "poor man's" friend and signed the petition. Walkerton Town Council took what we believe to be the wise course in declining to try to dictate off-hand to the Education Department regarding a matter in which the Dept. has advised by a commission of trained experts

Teas Steadily Advancing

"Teas—Advances from primary markets continue to indicate a strong situation with upward tendencies. Locally there are no changes but as stocks are not large there is a strong possibility for some advances as exporters state spot prices are still far below cost of replacement."

The above statement in the "Canadian Grocer" of March 10th is authoritative. Those who understand the tea situation say that unless the price becomes easier on the primary market very soon the consumer may expect to pay 10c or 15c more a pound for tea.

SWINTON PARK

Swinton Park formally bid goodbye to Mr and Mrs Robert Knox and daughter Lynette on Thursday evening, March 16th, when a large number of their friends and neighbors gathered at their home and many more were prevented from coming through the breakup of the roads.

After a general chat and social hour spent meeting one another, Rev. Mr. Jones was voted to the chair and after a few introductory remarks, asked Mr and Mrs Knox to occupy chairs that had been placed for them. He called on Mr Archie McKinnon who read the address and Mr Neil D. Clark who made the presentation.

The address is as follows:
 Mr and Mrs Robt. Knox,
 Dear Friends,—
 You have been residents of Swinton Park for many years and like others, have seen various changes in this locality. And now you are removing elsewhere. In parting with you we are losing good and worthy friends and neighbors who were always ready and willing to help when and where help was needed, without taking into account any personal sacrifice or inconvenience involved.

We have gathered here this evening to express in a formal but sincere way, our appreciation of your work and of your character. As a slight token of this good will and appreciation, we ask you Mrs Knox to accept this cut glass and you Mr Knox this watch.

We hope you may long be spared to use and enjoy them and that they will pleasantly remind you of your Swinton Park friends who eagerly and unanimously availed themselves of this opportunity to express their high regard, true esteem and genuine appreciation. We trust you may long and happily enjoy your new home and that we may often have you back with us, as our social and particularly our church life will be incomplete without you. When life's short day is over may it be ours to meet where parting is unknown.

Signed on behalf of friends and neighbors,
 Mrs Jas. Wilson Arob. McKinnon
 Mrs N. McMillan Neil D. Clark

Immediately following, the Session of St. Andrew's Church, presented Mrs Knox with a Book of Praise and Mr Knox with a Bible. Rev. Mr. Jones in a few kind and feeling words expressed the regrets of Session and congregation over the loss sustained in the departure from our church and social work.

Mr Knox suitably replied and thanked each and all for the kindness shown and asked not only those present that night but all old friends and neighbors to call on them in their new home in Priceville where he would be glad to welcome them.

Mr and Mrs Knox are leaving the old home farm which has been in the family for sixty years and we hope may long continue so. Their son, who is taking over, and we trust will follow in the steps of his father and grandfather, who have been interested in the best things of church and state during all these years.

ADDITIONAL LOCALS

"Which weeds are the easiest to kill?" asked an Egrement farmer of an old bachelor out near Bunessan, "Widow's Weeds" replied the latter, "You have only to say, 'Wilt thou?' and they will."

Premier Mackenzie King was called to Denver last week on word of his brother's death. He is accompanying the remains home and interment will take place in Toronto today. Dr. King was 41 years of age and made a gallant fight against tuberculosis. His death is the fourth in the family in five years, father, mother and sister having predeceased him. One sister survives.

Prov. Treasurer Peter Smith has brought down a racy budget showing a surplus of over \$600,000. This is gratifying after nearly three years of "carrying on." Opposition critics (shall we say "of course") complain that it is merely a paper surplus and the Globe finds fault because the Minister has not revealed the estimates for the coming year. Hon. Peter must walk straight!

DAYLIGHT SAVING—The Daylight Saving question is up again. Toronto changes its clocks May 14 and again Sept. 17. It's all right where its popular says the Owen Sound Sun. Otherwise it is irritating and confusing. Anyone who likes can practise daylight saving without changing the clock by going to bed at dark and getting up again with the sun. There is some word of the railways adopting it again this year, which will be an inconvenience except in the few cities where it is in vogue. Unless it can be made general, Daylight Saving is more a hindrance than a help.

FARM WATER SUPPLY

Practical Pointers About Installing Suitable Equipment.

Putting Running Water In the Home and the Barn—How to Develop the Natural Water Supply—Several Systems Suggested.

(Contributed by Ontario Department of Agriculture, Toronto.)

IN penning this short article the writer desires to stress two main points in regard to this subject, first, the need and importance of securing an adequate and permanent supply, and, second, the installation of suitable equipment for getting the water "on tap" in house and stables and about the lawns and gardens.

In regard to the supply of drinking or hard water, it may be said that of late many of the old shallow wells of the Province have been falling seriously, thus indicating that the water-table is not as high as it used to be. It is to be hoped that this is only a temporary condition and that many of these wells will soon become serviceable again. However, the shallow well can seldom be relied upon absolutely, and so as a rule it is wise to sink such wells deeper. This usually means drilling. Sometimes there is good reason for abandoning the old well altogether and choosing a new site. A careful survey of the existing wells of the district in respect to depth, supply and character of the water will usually prove useful in regard to the advisability of drilling, also a knowledge of the nature, depth and dip of the underlying strata or rock formation may help too. Instruments for locating underground water, so far as our experience goes, have not been a success in this Province, although much is claimed for them in some other countries differing widely from Ontario in geological formation. Some individuals claim that they can locate underground water by means of a forked twig from such trees as cherry, plum, and hazel, and because we have known good wells to be found in this way, and because prominent scientists have given the matter considerable attention in recent years, we are not inclined to pooch-pooch the idea. In some cases old wells go dry because the water veins feeding the well have become clogged. If so, a charge of dynamite in the bottom will effect a remedy. Sometimes an old dug well will supply plenty of water for all time if it is dug a few feet deeper, or if the formation is sandy or gravelly (fine) for some depth below the bottom a special filter may be sunk into a water-bearing layer of sand or gravel with good results. It is well to emphasize the value of a good spring. If one exists reasonably close to the buildings it may be made to supply them with water if certain condition obtain. In every farm home there should be a large cistern either in the cellar or just outside the cellar wall and below the eaves for storage of rain water. This water can be used for washing purposes, bathing and flushing the closet. A large cistern at the barn and connected with the eaves-troughing thereon, will supply a large portion of the drinking water for the stock in the rainy periods. It is very essential that the supply be ample and never falling, and when this is assured steps may be confidentially taken to install water systems in order to have the water convenient about the home.

The second point, namely, the distribution of the water supply, is a very big one, and one about which a good deal might be written. Space will permit only the very briefest treatment, but if more details are required write the Department of Agriculture, Toronto, Ontario, for Bulletin No. 267, entitled "The Farm Water Supply and Sewage Disposal," or the Department of Physics, O. A. College, Guelph, will gladly advise regarding any problems received by letter.

(1) If the well be shallow, that is the level of the water is never more than 25 feet below the surface, or say the level of the pump cylinder, the pump may be located inside the buildings instead of directly over the well. Greater convenience would be the result of such a change.

(2) A small water tank in the attic of the house will make it possible to install plumbing fixtures, as sinks, bath and closet in the home.

(3) Better than the attic tank system is the compression system. A strong steel cylindrical tank is located in the cellar or some frost-proof place, water is pumped into it from well or cistern against air pressure which forces the water to all points where it is required. The pump may be operated by hand or better by gasoline engine, windmill, or electric motor.

(4) If electricity be available the compression system can be operated automatically and the storage tank made so small that the water is drawn fresh from the well instead of from a large storage tank.

(5) If a good spring exists on ground level with top of house or higher, a pipe under the frost-line between spring and house is practically all you need in order to have the spring water on tap.

(6) If not high enough for a gravity system the spring may possibly be advantageously located for installing a hydraulic ram which will pump the water to a tank in house or stable or trough in yard. It is worth while having pure and cool spring water always on tap about the buildings.

The fall would be a good time to put in a system so that you will not be obliged to carry water another winter. First be sure that your supply is ample for all requirements, and then go ahead with the installing of some suitable water system, and do not forget that we are anxious to help you.—R. R. Graham, O. A. College, Guelph.
