CONTRACTOR OF THE PARTY

Prov. XXIV., 29.

It is not our purpose here to make a comparison between buye and play, or to endeavor to show any relation between them, although one is sometimes led to think that there is a resemblance between the appetites of the youngsters of both the human and porker kind.

No, our purpose is to call to your attention the fact that since the boys' interest in pigs has evolved from pulling its tail to hear it squeak, to the raising of prize-winning porkers, we' have had better pigs and also better boys. Somehow the influence of one upon another has been entirely bene-

There is no doubt but what the boys' club work has been responsible for this. It has done more than anything else to instill in the boy a real love for the farm and an awakening to its possibilities. It has also developed in the boys the spirit of sportsmanship in competition, and furthermore it has developed leadership and initiative in the rural youth that would not have been developed in any other way. And still there is another thing that it has done. Through co-operation the boy and the pig, or the calf, have shown dad that there were some things about farming that he did not

boys and pigs keeps up so that this good work can go on with increased
