Application should be made as early as possible, but not later than September

The Manager of any of our Branches will be glad to furnish full particulars upon request.

THE ROYAL BANK OF CANADA

# POWER FARMING

## With the Fordson Tractor

THE Fordson Tractor is taking care of every power job; it is taking the drudgery out of farm work and solving the labor problem. Power farming with the Fordson reduces the cost of preparing land to almost one-half what it would be with horses, and saves a third to a half of the farmer's time. What machinery does for the factory, the Fordson Tractor is accomplishing on the farm-it is increasing production at lower costs and making farm life attractive.

Power Farming with the Fordson means to you the facilities for plowing more acres than you ever dared to put in crop with horses. You can do it with the certainty that the Fordson will enable you to harvest the extra crops in less time, with greater efficiency and at lower cost than with any other form of power.

The Fordson and Plowing-The Fordson plows 6 to 8 acres in a 10 hour day, handling two plows in average soil. Some Fordson owners have done 10 acres in 10 hours. It requires only an average of 11 to 2 gallons of kerosene to the acre.

Light Weight-Weighs only 2700 pounds. Heavy enough to grip the ground, light enough not to pack the land or sink in soft earth. Compact in design, it can make short quick turns at the end of furrow.

Belt Work-The Fordson will not only do your fall plowing more quickly, more efficiently and at lowest cost, but it forms a wonderful power plant for running the thresher, silo filler, electric light, grinder, hay baler, etc.; it has 22 horse power at the pulley, dependable, smooth power produced economically from low priced kerosene.

Repairs Always Available - We keep all necessary parts. Our mechanics are always ready to come at your phone call to make repairs should anything happen your Tractor Farmers everywhere have caught the vision of the wonderful future for the individual and the nation in power farming. Let us demonstrate the superiority of the Fordson as the most efficient means of putting it in practice on your farm.
