Drastic Measures Not Only For Restoring But For Further Developing Japanese National Capital.

on the disastrous nature of the earthquake which was characterized as an unprecedented national calamity, the rescript appeals to the nation for a supreme effort and drastic measures to restore confidence and also emphasizes the necessity not only for restoring, but for further developing Tokio, which it says is the political and economical centre of the country and the main source of national civilization.

Tokio, says the rescript, remains the national capital, although its outward structure is destroyed. It further states that a special organization has been established for the revival of the capital and concludes by calling for a united effort by the Government and the people for the relief of sufferers, the suppression of disquieting rumors and the revival of the national

Natural Resources Bulletin

The Natural Resources Intelligence Service of the Department of the Interior, at Ottawa,

In the interior provinces of Canada the public are accustomed to find on sale and in the more conspicuous places the larger species of fish, such as the halibut, cod, haddock, etc., but down by the sea one of the most useful fish, and the one of which the largest catch is made, is the sea herring. For the first six months of the present year 81,051,000 pounds of herring was taken. How this enormous quantity was disposed of is interesting: 1,730,100 pounds was consumed fresh, 3,635,200 pounds was smoked, 24,842,700 pounds was dry-salted, 6,500 barrels was pickled, 7,242,300 pounds was used as fertilizer. Probably the most important use made of the herring, however, was as bait for the larger fish we are familiar with. For this purpose 72,423 barrels, of 200 pounds each, was used. Thus it will be seen that while the herring is one of the smaller fish, it is probably the most important.

Rest and Change.

Rest means nothing unless it comes Cheese, finest easterns, 231/2 to after hard work; change counts for life is filled with boredom, in themselves and in one another, much is heard of plans for dodging ennui and defeating the terrible fate of having

nothing to do. Sometimes those who are devoted to busy men and women, whether as friends or in the circle of the family, are heard to wish devoutly that they who work so hard had less to do. But it will usually be found that those who are industrious have formed a congenial habit of hard work, love what they are doing and would be really miserable if they were separated from the task and made to twiddle their

thumbs in idleness. What a mercy is hard work in a time of sorrow! The work cure for many things is just as important as a rest cure for other things. Work is an opiate that has no evil after-effects. "Give me work to do or I shall go crazy," says many a man whose mind is raw and bleeding from a recent

bereavement. The busy man's idea of a vacation you expect him to travel, do not expect him to move with his eyes shut and all his other senses inoperative. Wherever he goes he will be noting a

good idea to apply when he gets home. The real vacation is not sittling like Hubbard squash in a market garden; it is doing something different. To a man who carries an inquiring disposition where he goes there are no dull times. He sees a drama, whether it be comedy or tragedy, in a railway station or a trolley car or a ferryboat. The greatest writers of fiction are the clearest observers of fact. Life is just as beautiful and just as interesting as we are willing to let it be: and yet there will always be those to whom living is a dull thing, because The losses of Tokio banks have been they are such selfish, silly people, who surprisingly small. The banks are do no work and cannot even amuse

Fashions in Trees.
