Natural Resources Bulletin.

The Natural Resources Intelligence Service of the Department of the Interior at Ottawa,

It is not generally known that Ontario possesses what is credited to be the largest island in fresh water in the world. Manitoulin Island, in Lake Huron, is 80 miles long and about 28 miles wide at its widest part. It is deeply indented by many bays, has a very rugged surface, and but few roads. There are no railroads on the island, and the few settlements are all situated on the shores. During the summer the island has many visitors, a number of summer resorts having grown

When compared with the Province of Prince Edward Island, it will be seen that there is not a very great difference in area, the latter island being 114 miles at its greatest length and 34 miles at its greatest breadth. In its narrowest part, which is near the centre, it is but four miles across.

SCHOOL HEALTH

Many a mother who has carefully protected her child through the first A despatch from Stockholm says:- | medicine on this continent was made five or six years of life dreads to see

You can do a great deal yourself. Inspect your child, yourself, every morning. If there is any sign of illness mother will not be fooled into keeping the child out of school for every whim and fancy. Neither will she commit the far greater error of risking his health merely that he may keep up in

his school grades. Next to the mother the responsibility rests upon the teacher. Any child showing symptoms of illness must be carefully inspected. If doubt exists the teacher must be ruled by the welfare of the majority and the child must be excluded. This rule should hold good even though the illness seems to be "just a cold." Almost all colds are contagious. The child with a cold will get well ten times quicker by staying at home in bed. Furthermore many serious diseases have the symptoms of a cold in the early stages. Teachers should be supplied with a clinical thermometer and understand how to take temperatures. It can be learned in ten minutes.

Let us hope that none of the intelligent parents who are our readers would think of being angry with a teacher for sending a child home on suspicion of filness. The teacher is bound to make some mistakes but you can always get a doctor to decide. financial assistance amounting to \$90,- Give your teacher the aid of a school nurse and you will lessen disputes and save your children from much preventible illness.

Do not allow common drinking cups in your school, nor the use of common or roller towels. It is a simple matter for you to see that a clean towel is placed in your child's lunch basket. You should visit the school often enough to satisfy yourself that it is kept clean and light; that the well is protected from contamination, and that the privies are clean and fly-tight. These are practical ways in which you may safeguard the health of your child. Dr. Lersigo.

November.

After October's bacchanalian splendor Fades from the forest and the burnished hill,

The grey days come in, the misty days and tender.

The little quaker days, down-hushed and still.

Nothing could stay the asters' purple The carnival or the red hunter's

And empty nests tell but the timeworn story Of ended songs and wings that flew

You are the haunted month, O dark
