# Efficient Farming

CARE FOR THE COLT TO MAKE milker this may be postponed till six THE HORSE.

of his sire and dam but in the care pregnant. Strong, healthy foals can best be produced from healthy mares which are fed nutritious foods and given plenty of exercise, running in fields or paddocks or doing light work. It is difficult on many farms to find desirable work for brood mares, particularly in the winter, but when spring work commences there is no difficulty, and any mare is better working, provided care is exercised pery places, not unduly crowded, not worked with too short a whiffletree, or overworked. Many foals have their chances ruined when their dams are

Not only in the selection cured if more than one foal is being reared, for a group of foals will not and management of the dam while worry so much as a single one. They should be given plenty of exercise with fresh water before them at all times and good bone and muscle building food. From three to five pounds of grain may be fed per day during the winter months; this would be composed of two parts oats and one part bran with a little oilcake added. The grain is best fed mixed with cut timothy and clover hay, slightly damped. This adds bulk to the ration and prevents the foal bolting his grain, and assists digestion as the grain cannot form in doughy lumps in the stomach. A few roots (carrots, mangels or turnips) should also be provided and overfed and under-exercised during plenty of good quality clean hay, mixed timothy and clover, or alfalfa, an excellent bone and muscle builder.
