Canada Talc Deposits.

The sweetly scented talcum powder with which women all over the con their babies is another Canadian raw material about which little is heard and concerning which little is known by the general public. Talc in its native condition is really a soft rock and is also known as steatite or soanstone. To chemists it is known as magnesium silicate. It is easily cut. silvery white in color, has a greasy feel and when powdered it is known as French chalk. It is heat-resisting and non-conductive. It is used principally for toilet purposes, as a lubricant, as a filler for paper and for tailor's chalk. It also enters into the manufacture of rubber goods and textiles and cut in blocks is used in furnace linings. Canada possesses the most important high-grade talc deposits in the world. The very highest qualities are necessary in the manufacture of talcum powder, and Eastern Ontario is the chief source of supply of the indispensible toilet article for the North American con-

Mussel Mud as Fertilizer. The fertility of the soil of Prince Edward Island, although naturally high, is further increased by the constant application of mussel mud collected along the shores and spread over the fields. This rich fertilizer is composed of decayed shells and estuarine silt and contains a large percentage of organic matter. The content of lime in this fertilizer forms a valuable ingredient in the the use of seaweed and fish. This heard nothing till that chair crashed." "But you are wrong, monsieur," soil. Further fertility is assured by care of the ground and systematic replenishing results in abundant crops and rich green verdure.

Scientifically Designed BALLOON TIRE TREAD

Another Reason why Firestone Tires are . . . Better

W HEN Firestone engineers were developing the Balloon Tire they found it necessary to design a tread altogether dif-

ferent from that which is required by High Pressure Tires. The projections of the crossand-square tread are small and the rider strips narrow to permit the tread to cling to the road, giving the greatest non-skid surface. This tough, pliable tread has the wear-resisting qualities that give thousands of extra miles of service.

This flexible tread must b placed on a flexible carcass. To provide for the extra flexing strains Firestone dips the cords of the carcass in a rubber solution. By this process, every fiber of every cord is saturated and inulated with rubber, minimizing friction and wear.

If you want economy, comfort and safety of Gum-Dipped Tires -see the nearest Firestone

#### Strange Racial Blend.

Negro slaves, and apparently the admixture of races has had a good effect on the present generation, for Bermuda's colored population is noted for its intelligence and progressive-

Few traditions exist concerning the Indians who were brought to the islands, but they are said to have accepted their harsh fate stoically, giving no trouble and laboring industriously in the fields. The Negroes, however, when first brought from Africa in the early days, organized several formidable conspiracies, which resulted in severe measures against their lawless-

#### Six Brains a Year!

If you are thirty, you have had, so far, 180 sets of brains, for the "grey atter" is renewed six times yearly. each set was different in quality from its fellows. That was due to various factors-diet being one of the chief. If, for ex mple, you had a temporary liking for parsnirs, he brain set that had the benefit of the latter would be a good one. for parenins contain phos boric soid. Peaches which contain prussic acid, are bad for the brain.

If, for three months, you ate large quantities of watercress and apples, your brain would be in first-class fettle. But it would get no beneft from carrots. The malic acid in strawberries is a fine brain-builder. Even the season of the year has its effect on the brain. The best sets are those that come in December or Morch The worst are the August

nd October sets. Assuming you began to think consciously at the age of five, then at thirty, if you have done an average mount of thinking, your "impressions" would number about 1,920,-000,000. Those whose work is entirely mental would double those fig-

A woman's brain is about 8 ounces lighter than a man's, but it is of surerior quality-of a higher specific gravity. It lasts longer, too. On an morage a woman of sixty has a . contr per cent. better brain than a an of the same age!
