## FERTILIZERS FOR FALL WHEAT

LIUNDREDS of Ontario farmers now realize that a II complete fertilizer such as our Scottish "Special" 3 10-5 yields the most profitable results on fall wheat.

In certain quarters the use of Acid Phosphate is recommended, but this article being a raw material and liable to contain free Sulphuric Acid, which destroys lime in the soil and retards bacterial development, is too risky to use.

Is it not significant that, in the older fertilizer using sec tions of the United States, farmers are now so prejudiced against Ac'd Phosphate that manufacturers in that territory are presently considering changing the name of the article?

> Write us for a copy of our new pamphlet "FERTILIZERS FOR FALL WHEAT" just published, giving further information.
