Switzerland began during the war D. to undo the rule of black coal. able to obtain her necessory coal suplies either from England or Germany, she decided to electrify all her important railroad lines, utilizing the abundant water power of the torrents and rivers in that mountainous country. Austria, which soon after the war was obliged to import 80 per cent, of her requirements in coal, regarded the establishment of hydro-electric stations as th only means to save her trade balance deficit of the moment- ton penitentiary when Dunlop, Toron- be quite possible that the same place ous item "coal imports."

Great Expansion Begun.

Thus, an electrification era began, when the Austrian currency was construction with an aggregate power of 2,500,000 horsepower.

It was during this period that the carry through their electrification schemes. The most important line the released 20-year term ex-convict, they intended to electrify was the Bludenz-Vienna stretch of the main line leading from West to East, on which the Orint and Arlberg expresses are keeping up the continuous grapevine penitentiary telegraphie touch between Occident and Orient, this line leading from Calais via release Paris- - Zurich - Vienna -Budapest-Bel-

grade down to Constantinople. Got Loan From League.

The Finance Committee of the League of Nations granted a considerable part of the League's loan for the purposes of further electrification plans, and with this financial aid the above-mentioned main line was electrifled from the Swisk frontier to Salzroads, the Salzburg-Vienna stretch was the next to be electrified. This stretch is 200 miles long, approximately corresponding to the distance betwee New York and Washington.

The Austrian Federal Railroads now have definitely given up the idea to electrify this stretch. The reason of the abandonment of the scheme was the careful calculation of costs of electric and steam haulage. These figures have revealed an amazing fact: Electrification in these parts was an expensive luxury compared

with steam power. The careful calculations have proved that electrified haulage in this stretch would cost \$1,300,000 more per year than steam traction. There were two developments in recent years coal, the two factors being, first, the gradual decrease of coal prices; and, second, the technical improvements in steam haulage.

Waterton Lakes Park is Popular

Although for over a quarter of a century Waterton Lakes national park has formed a holiday paradise for residents of southern Alberta, until recent years it bas been almost anknown to the travelling world. With the advent of the motor and the building of good roads connecting the park with main provincial highways. this beautiful reservation has come into its own and each year an increasing number of visitors enjoy its many attractions.

Synthetic Rubber Again

Synthetic rubber, already produc ible in the laboratory by more than one method, but hitherto kept from the world's markets by inferiority of quality or excessive cost, is nov again reported to be on the point of becoming an article of commerce. Dr. A. von Weinberg, a German privy councilor and a director of the Dye Syndicate, stated recently at a meeting of the German Chemical Manufacturers' Association at Frankfort-onthe-Main, that it will soon be manu- Where art thou, beloved, to-morrow? factured in Germany and enter the world's markets in competition with the natural product. Dr. Weinberg stressed the part synthetic production is playing in the

While before the war Germany's denced by the various mergers with

ganizing, and two years later formed

Another dispatch, by the Associated synthetic rubber will soon appear on th world markets as a commercial commodity. We read:

The synthetic product is declared to be the equal of the natural rubber and cheaper in cost of production, thus permitting its active competition with the natural product.

Dr. Weinberg explained that the synthetic rubber was obtained by "contact synthesis," a process which has been under experimentation ever since the war. He declared that the progress of chemistry was an international affair, and that nothing was more pernicious than to fall into the error of calling Germany "the country of chemical industry," ragardless of the achievements of others. Negotiations are proceeding, he

said, to re-establish international contact between the chemical interests of different countries, but an idea of the world that is entirely baseless, he said, was the impression which ap-
