firestone Tread is Scientifically Designed

When Firestone engineers were developing the Balloon Tire they found it necessary to design a tread altogether different from that required by High Pressure Tires.

The Firestone tread was not designed with large, massive projections for appearance or to make plausible sales argument. On the contrary, the projections of the cross-and-square tread are small and the rider strips narrow, permitting the tread to yield to irregularities and cling to the road, giving the greatest non-skid surface. This tough, pliable tread has the wearresisting qualities that give thousands of extra miles of service and save you money.

Your nearest Firestone Dealer will gladly supply your needs and give you the better service that goes with these better tires.
