# **Ancient Flyers**

### Days of Great Flying Reptiles Repictured by Fossil Discovery

Eugene, Ore.-With man's conquest of the air now holding the center of public attention, especial interest is attached to the discovery of an oddshaped, fossilized bone near Mitchell, Ore., which is reminding natural scientists of an earlier and seemingly less successful attempt to invade the realm of the birds.

Not men, but reptiles, engaged in these early flying enterprises, and developed, not machines, but long, membraneous wings with which to propel themselves in the air. But despite the seeming power of these wings, which in some types reached a spread of as much as 20 feet, the flying reptiles, or pterosaur, faded out of the picture. All that is left to remind men of such creatures are a few fossilized remains, such as that found by Dr. E. L. Packard, professor of geology at the University of Oregon, while on an investigation in Wheeler County last summer.

Dr. Packard's discovery is especially important as it is the first skeleton of the kind found west of Wyoming, indicating the pterosaur existed along the shores of the cretaceous sea which extended at one time as far east as the Achocho Mountains in Oregon. That the skele-The knock-down, take-down, folding ton is that of a bona fide pterosaur but, according to the Camping Editor of the identification has just been re-

## Befuddling the Brain

Y. Y. in the New Statesman (Lon-

don); (In an article on the Prince of Wales, a writer in a London Sunday newspaper says: "You will not find I do not remember ever reading a sentence with more curious implications. . . . If books only befuddle the brain, then it would obviously be better if all the schools were shut and schoolmasters who teach reading, writing and arithmetic to innocent children should be sent to prison as public dangers. . . . (Still) we are inclined to-day to exaggerate the importance of reading and writing to the growth of the intelligence. A considerable perecntage of human beings would be nevertheless better company, more imaginative and more intelligent than others who could. Speech plays a far more important part in the life of the ordinary man than reading and a world containing good poets and good farmers is a world in which any of us ought to be reasonably happy

## The World's Work

Church Times (London): The lucky minority earn their living with pleasant and sometimes exacting tasks. They work with a zest. They are not the least inclined to strike for an eight-hour day. But for the majority, in the circumstances of the modern A man might well write a book or paint a picture or preach a sermon or spend long hours in a chemical laboratory without any thought of wages on Saturday. It is not conceivable that a sane man would clean a sewer or a chimney just for fun. And since there are many dull and unpleasant things to be done in a modern community, it is surely only decent that society, which benefits, should see that its servants are paid adequately and should have sufficient leisure to compensate them for their hours of labor.
