Canada and the Empire

Geoffrey F. Bell in the Nineteenth Century (London): Canada's real contribution to the society of nations is in its interpretation of England to the United States and of the United States to England. It alone can understand both. Canada has mainly English institutions and a political system like ours, while at the same time she is daily mixing with American ideas. By sentiment and sympathy she is attached to England, but she is more akin to her big neighbor in current ideas and outlook. She knows both of the main branches of the English-speaking world, and yet she is distinct from both. She is as much a separate people from ourselves as she is likely to remain separate from the United States. She has an individuality distinct from both, and is not likely to be swamped by either ..

NEW HEAD OFFICE BUILDING An Increase of \$79,239,000

Rate of Interest earned on mean invested assets 7.02% The high rate of dividends allotted to participating policyholders is continued and the special dividend on maturing policies extended and increased.

568,197,000

EXTRACTS FROM DIRECTORS' REPORT

New policies paid for numbered 161,391 for a net amount of \$654,451,143.27, an advance of \$213,206,-752.36, or more than forty-eight per cent., over the previous year. This marked increase and the fact that the average policy, for the first time, exceeded \$4,000, afford impressive evidence of the evergrowing popularity of the Company.

After deducting amounts reassured, the total assurances in force amount to \$2,401,237,036.94, an increase of \$504,321,102.37. This advance is notable not merely for its magnitude, but because when allowance is made for terminations by death and maturity, it represents a remarkably high rate of continuance, and evidences great satisfaction on the part of our policyholders.

The amount paid to policyholders since organization, together with the amount at present held for their security or benefit, exceeds the total amount received from them in premiums by \$139,290,474.03.

The rate of interest earned on the mean invested assets has risen to 7.02 per cent. This figure includes a certain amount from bonuses and stock privileges accruing on many of the Company's holdings; but if these were entirely eliminated the rate would still be 6.60 per cent.

A net profit of \$13,077,284.62 was realized from the redemption or sale of securities.

The surplus earned during the year, based on the values entered in the accounts, amounted to \$42,-863,578.59, but from this sum substantial appropriations have as usual been made to further strengthen the position of the Company.

An additional \$10,000,000.00 has been deducted from the market values of our securities as a provision against possible market fluctuations, raising the amount thus set aside for this purpose in the accounts to \$30,000,000.00. A further \$1,000,000.00 has been written off the

Company's buildings. \$931,000.00 has been appropriated to raise the annuity reserves to the Rutherford table of valuation, with interest at 3 1/2 per cent. This exacting standard requires reserves \$2,656,000.00 in excess of those of the Dominion Government standard.

\$1,200,000.00 has been set aside as additional provision for claims arising from total disability, death claims as yet unreported, and possible claims under cancelled policies on which a surrender value or reinstatement might be applied for.

\$22,606,265.67 has been paid or allotted as profits for the year to policyholders.

The special amount entered as a liability to provide for unforeseen contingencies has been maintained at \$12,500,000.00.

After making all these deductions and allocations, \$5,868,899.96 has been added to the undivided surplus, bringing the total over liabilities, contingency accounts and capital stock, to \$60,307,762.44.

In accordance with our usual conservative practice the securities owned by the Company have again been valued at figures much below the market quotations current at the close of the year. This undervaluation represents an important element of strength to the Company additional to the specific provisions in the statements.

Your Directors are pleased to announce that the high scale of profits at present allotted to participating policyholders will be continued during the ensuing year, while the Special Dividend on maturing policies, introduced last year, has been extended to include policies maturing after having been in force five years or longer and the scale of benefit has been increased.

The business of the Company has always been conducted under the exacting provisions of the Canadian Insurance law and the rigid supervision of the Insurance Department of the Government of Canada. Ever since we entered the United States in 1895, the Company has been under similar supervision there and is now subject to the regulations of thirtyeight States of the Union which require periodical examination of the affairs of all companies licensed in their territory. In the discharge of their regular duties a committee of twenty-two examiners, representing the States of Michigan, Massachusetts, Minnesota, Ohio, Tennessee, Washington, Virginia, West Virginia, Florida and the District of Columbia recently completed an exhaustive examination into every department of the Company's affairs. The report of this committee makes gratifying reference to the liberal treatment accorded to our policyholders, and provides authoritative testimony to the Company's strength. Even adopting the low valuations placed by us on our securities, the committee still reported a surplus at the close of last year \$1,333,921.71 in excess of the figure claimed by the Company.

ISSUE No. 9-'30

Farm and Garden

Vegetables in Rotation

It is well to rotate vegetables throughout the patch each year. In other words, do not grow the tomatoes this season where they were planted last year. Of course, it will be necessary to save the garden plans from year to year, but this should be done anyway. It is a good plan to have leguminous crops, such as peas and beans, which add fertilizer to the soil, follow such gross feeders as corn and the root crops. In planting vegetables, it is good business to put in a few extra rows on the chance that they will escape frost and produce a crop two or three weeks ahead of the average, but save the bulk of the seed until the time specified in the seed catalogue. Have a sufficient supply also to replant any rows which may have been ruined by flood or frost or even by some small though energetic young gardener who may have dug them up by mistake.

Shrubs

There are so many beautiful kinds

of shrubs that it is impossible to go

into varieties. A complete list will be found in any seed catalogue and there is also a special bulletin on Ornamental Trees, Shrubs and Woody Climbers by W. T. McCaoun, Dominion Horticulturist, issued by the Dominion Department of Agriculture Generally speaking, place the largest shrubs at the back, from two to ten feet from house of wall. If at all possible, arrange in clumps. Avoid straight rows at all cost. Good clay loam is the most suitable for general purposes, If too much clay, add well rotted manure and if sandy add humus (rotted vegetable matter, such as strawy manure, leaves, etc). As a rule, the more tender shrubs should be planted on the north or west side of the house as there is 'ess winter killing there from alternate freezing and thawing in early spring. Shrubs will do fairly well on the north side, particularly if late bloomers are selected for this exposure so that they will get a fair amount of sunshine before blossom time. Shrubs should be planted as far apart as they will be high at maturity, unless a screen is desired or a hedge, when they may be crowded closer. In planting, bury an inch or so below depth they were in before transplanting. Most shrubs, especially those that bloom after the beginning of June, can be moved in the spring without much loss of growth. This class should be pruned in the spring and the very early bloomers in the fall.

Pruning

This is the month for pruning in the garden and the orchard too. All of the dead canes should be removed from the raspberry patch as well as the spindly ones among the new growth. Some of the older wood should be cut away from the goodeberries and currants. Grapes must be pruned early to avoid excessive bleeding. These vines should be cut back to a mere skeleton as the fruit is borne on the wood grown this year, Fruit trees should be opened up to let in sunlight and air.

How to Make a Lawn One of the first jobs to be carried out after a new house is built is that of making the lawn. The soil me t be put in fair condition as grass requires food just the same as flowers. Make the surface level. To do this, Victoria Colonist (Cons.): The it is well to rake over as evenly as possible two or three times, giving rains and perhaps a freeze or two a

Optimism

Are you optimistic? I ask you the question point-blank. Do you persist in seeing the bright side of life? Do you believe in the triumph of good over evil? Of all human qualities optimism is the most to be desired. Point of view is what decides things. Says the Pessimist: "This world is a bad old world. It is a world of wars and famine and pestilences and dirasters. "The history of the world is the

most distressing literature in existeace. Men lie and steal and betray and murder. All life ends in death." But, says the Optimist: "This world is a good old world. The sun rises every morning to shed its fervent rays of warmth o'er the land. And the stars peep out at night to light the lonely traveller's way. And men are capable of truth and honesty and human kindness. Life multiplies it-

And so we have the two sets of facts. The world is a bad old world and the world is a good old world. And no man can change either set he chooses to look at .- Edwin Piper.
