Polish-Poisonous

Cleaning Powder Found to Contain 20% Sodium Cyanid

Silver Polish is not intended to be eaten, but unless knives, forks and spoons are carefully washed after polishing, we may swallow some of it When the polish contains an active poison, trouble results.

A number of cases of acute cyanid poisoning, apparently due to consuming silver polish, are reported from the United States in The Lancet (London). We read:

but on examination the powder used drifts. for cleaning silverware was found to contain over 20 per cent, of sodium hotels where this compound and to obtain greater strength.

Advantages For The Children

Hilda Richmond

Mr. Schramm was rejoicit.g over his wonderfully good year in business. more because of what he could do for his children than for his own personal

"I'm going to get the boys each a tip top sled," he confided to his wife as December twenty-fifth approached. "When I was a boy I had to make my own things, and I want my children to have some advantages. I well remember how it took four of us boys to drag the heavy old sled re sobbled together to the hill where we wanted to slide."

Santa Claus was very generous to the Schramm children, and their parents enjoyed the fun as much as they did-winding toys and making wheels One pound liver, 11/2 tablespoons go round on Christmas morning. It ground suet, 11/2 teaspoons salt, 1 was an ideal Christmas for coasting, The original St. Bernard of the Alps, small onion, minced, 1/4 tablespoon so after dinner in company with a cyanid. It was ascertained that it is said, was probably the Swiss pepper, 2 eggs, 3 slices stale bread, 1 number of neighborhood youngsters similar cases had occurred at many sheepdog bred with a mastiff in order tablespoon chopped parsley, 1-8 tea- the three boys set out for the hill a spoon nutmeg, 1/2 tablespoon bacon few blocks away.

others containing cyanid were used For centuries the monks specialized fat, 2-3 cup flour. Soak the bread in "Let's go over and watch them, as a routine. Usually the utensils in the breeding of these dogs and water to cover until soft, squeeze dry Mary," said Mr. Schramm. "We won't were dipped about once a week in a eventually got a strain which was one and crumble up into small pieces. Put let them see us, but I'd like to know

Put meat all my ideas of advantages have had or fish, heated in sauce, in the centre. a severe jolt this afternoon. We'll be cheating our children if we don't encourage them to meet and overcome difficulties."

"I'm glad we've both found that out before the children are grown up," said Mrs. Schramm.-Issued by the National Kindergarten Association, 8 West 40th Street, New York City. These articles are appearing weekly in our columns.

New Diving Suit Defies Octopus

Suit Weighs Seven and a Quarter Cwt.—Resembles Lobster or Crab

> "I spent about an hour at the bottom of a tank in the newest design of armoured deepwater driving suit," writes Commander H. M. Daniel in the London Daily Mail.

> The dress, which weighs 71/4 cwt., is the invention of J. S. Peress, a British subject of Persian extraction. It is hoped that it will greatly facilitate the recovery of treasure from the bottom of the sea.

As the wing of an aeroplane imit ates the wing of a bird, so this diving suit resembles the points of a lobster or crab. In the dress at the bottom of a tank I felt strangely like a crab in an aquerium.

At the end of each arm I had a steel claw with which I could get a cruel grip of any victim or article within reach. With practice I was able to use my unwieldly limbs with surprising aptitude, picking up a penny at the first attempt from the bottom of the tank. Instead of the joints being on ball bearings, which, understand, are to be found on other armoured suits, the joints of this suit are like that hard bit of cup-shaped shell of the lobster claw, fitting into a larger cup filled with grease. The result is certainly remarkable in its freedom considering the weight and strength of the armour.

By the latest form of a decompression chamber it has been possible to descend in such a dress more than 50 fathoms. But the inventor hopes to be able to get down to 100 fathoms, where, he thinks, are ancient marble statues and treasure in sunken ships. One advantage which can certainly be claimed for an armoured dress is invulnerability from sharks and octopuses. I know from experience that it is an unpleasant feeling going down the diver's ladder with sharks circling round. Octopuses are also a deadly danger. In an armoured suit a diver would have little to fear.
