### **Quick Change** Garden Artists

By P. B. Prior, in "The Humane Pleader."

The days have gone when men found it easy to believe stories of human beings changing itno wolves or fish and birds and all he srange metamorphoses of the old legends and fairy tales. Yet all around us insects are making changes just as surprising all day and every day.

What could be less like a caterpillar or grub than a butterfly or moth? The caterpillar is an ugly, often repulsive creature with an enormous appetite, which crawls slowly along. The butterfy is the spirit of light and life, free as air to fly to and fro and living usually on a few sips of the juice of flowers. Yet every butterfly was a

Cleadas are creatures of the sunshine, which "sing" through the hottest day, perched in some bush or tree. Yet in their grub stage they spend long periods, years in some eases, in darkness underground.

Many insects are truly amphibious. Like frogs they spend part of their lives in the water and part in the air Such are the dragon-flies, the mosauitoes, which the dragon-flies eat May-flies and caddie-flies, Like tadpoles the larvae of dragon-flies have

Most of these insects prefer fresh water when in their laval form, but some mosquitoes breed in pools of sait water along the margin of the sea. Liners Will Race Across At- had discovered the secret of sun- a short lifetime," sai dthe man of sixty- value. There are also marine (or submarine) caddle-files, the larvae of which make cases out of Coraline seaweed, and are found in many places along the coast

genuity, resource and readiness to sacrifice themselves for the good of

In numbers and variety, of course, the insects easily surpass all the other inhabitants of the earth. The human population of the globe is still well under 2,000,0 0,000, but insects swarm in numbers past all reckoning. There are thousands of them to

every hu an being. Ants, bees, and wasps are by no means the only building insects. There are, for instance, the caddie-flieswhich I ha afready mentioned-and some other inserts, these spend the early part of the life in the water, and the later in the air.

Most of the caddle-worms build for themselves portable houses or cases | used motorcycles. Terms arranged. under water. They make them out of sticks, leaves or grains of sand. Others more ambitious make fixed houses out of tiny pebbles. And there are nomadic cad lie-worms which build no houses at all, simply stroll about on

When their time comes to change into caddie-flies the creatures leave the water and spend the rest of their life in the upper air. The males of Atlantic City, New Jersey one species are snow-white, and are | Sends Greetings to its Many sometimes seen flying together in Friends in Canada. thousands in upland districts.

Most caddie-worms live in fresh American Plan rate that you will But in wisdom this is known: water streams and waterholes, but | find it cheaper to stay at the | Each man's soul must be his own. ther is a marine caddie-worm which "Homelike Strand" than staying makes cases out of odds and ends at the bottom of the sea.

Dragon-flies have not much in com- cost before leaving. mon with cad 'o-flies except their | Music-Salt Sea Baths-Compliwater when young, and in the air in We will personally see to your later life, when they have acquired | comfort.

Though dragon-flies are sometimes | H. BRADFORD RICHMOND, called "horse-stingers," they do not sting horses, or anything else. They are indeed very useful creatures, since they eat quantities of mosquitoes and

other insect pests. Many of the larvae of dragon-flies breathe by means of gills. Like the caddie-worms they leave the water

later, and fly about as winged insects. Some species of dragon-flies are exceedingly swift of flight; in fact, it is claimed that they are the fastest insects in the world. They dart up and down streams at tremendous speed. Dr. R. J. Tillyard, who wrote a book about dragon-flies, devoted some attention to timing their flights, and came to the conclusion that the insect of one species can do nearly 60 miles an hour. There are many species of birds that probably do not

go as fast. Some Australian dragon-flies grow to a great size. One of them, found in mountain country in New South Wales, measured 61/2 iches across the wings, and is one of the largest dragon-flies in the world.

#### ----Hawks Fly South

Ottawa-Apparently choosing for themselves the role of vanguard to the trade delegation for South America, a party of Canadian hawks recently made a trip to Argentina. According to word received at the National Farks Branch of the Interior Department, the flight of these adventurous spirits was cut short by a blast of birdshot on a farm in Buenos Aires Province. The nationality of the birds was established when an Argentine farmer, not recognizing the hawks as on a good-will tour, let go his shotgun into a tree. On the leg of one of the trail-blazers was found a celluloid ring, red on the inside and black on the outside, marked "50 Canada." The band is of a type sused in Canada for identifying
