## The Bishop Murder Case

A PHILO VANCE STORY

BY R. S. VAN DINE

**SYNOPSIS**  
An insane genius in New York City breaks into a hideous tragedy. First the body of a man known as Cock Robin is found with an arrow through the heart. Then a young chap named Sprigg is shot through the top of the head. The murderer writes mocking notes to the newspapers signed The Bishop. District Attorney Markham is belittled and annoys the aid of Philo Vance.  
Those associated with the case are: Prof. Dillard, his niece Belle, and his protégé, Sigurd Arnesson, who hopes to marry Belle; John Pardee, a neighbor with a passion for chess; Mrs. Drukker and her son Adolph, a cripple with a super-intellect.  
Vance finds that Drukker has lied to him and is holding something back. On the night Vance determines to force Drukker to tell the truth, both Drukker and his mother are found dead.

### CHAPTER XXIX

The Sergeant dismissed the three detectives gruffly. He was obviously dissatisfied with their reports.  
"The farther we go," he complained, "the more gummed up this case gets."  
"Never mind, Sergeant," Vance exhorted him. "Let not dark despair overcome you. When we have Pardee's and the Professor's testimony as to what took place while Emery was watchfully waiting beneath the trees at 74th Street, we may be able to fit some very interesting bits together."  
As he spoke Belle Dillard entered the front hall from the rear of the house. She saw us in the drawing-room and came in at once.  
"Where's Lady Mae?" she asked in a troubled voice. "I was here an hour ago and Greta told me she was out. And she's not in her room now."  
Vance rose and gave her his chair. "Mrs. Drukker died last night at heart failure. When you were here earlier Mrs. Menzel was afraid to let you go upstairs."  
The girl sat very quiet for some time. Presently the tears welled to her eyes.  
"Perhaps she heard of Adolph's terrible accident."  
Possibly. But it's not quite clear what happened here last night. Doctor Barstead thinks Mrs. Drukker died at about ten o'clock."  
"Almost the same time Adolph died," she murmured. "It seems too terrible. . . . Pyne told me of the accident when I came down to breakfast this morning—every one in the quarter was talking about it—and I came over at once to be with Lady Mae. But Greta said she had gone out, and I didn't know what to think. There's something very strange about Adolph's death. . . ."  
"What do you mean by that, Miss Dillard?" Vance stood by the window watching her covertly.  
"I don't know—what I mean," she answered brokenly. "But only yesterday afternoon Lady Mae spoke to me about Adolph and the—wall. . . ."  
"Oh, did she, now?" Vance's tone was more indolent than usual, but every nerve in his body was, I know, vigilantly alert.  
"On my way to the tennis courts,"

"Were any comments made about it?"

"Uncle told me I shouldn't spend so much time with Lady Mae—that she was unhealthily morbid. He said the situation was very tragic, but that there was no need for me to share Lady Mae's suffering. Mr. Pardee agreed with uncle. He was very sympathetic and asked if something could not be done to help Lady Mae's mental condition."  
"And Mr. Arnesson?"

"Oh, Sigurd never takes anything seriously—I hate his attitude sometimes. He laughed as though it was a joke; and all he said was: 'It would be a shame if Adolph took his tumble before he got his new quantum problem worked out.'"  
"Is Mr. Arnesson at home now, by the by?" asked Vance. "We want to ask him about the necessary arrangements in regard to the Drukkers."  
"He went to the university early this morning; he'll be back before lunch. He'll attend to everything, I am sure. We were about the only friends Lady Mae and Adolph had. I'll take charge in the meantime and see that Greta gets the house in order."

A few minutes later we left her and went to interview Professor Dillard.  
The professor was plainly perturbed when we entered the library that noon. He sat in an easy chair with his back to the window, a glass of his precious port on the table beside him.  
"I've been expecting you, Markham," he said, before we had time to speak. "There's no need to dissemble. Drukker's death was no accident. I admit I felt inclined to discount insane implications arising from the deaths of Robin and Sprigg; but the moment Pyne related the circumstances of Drukker's fall I realized that there was a definite design behind these deaths: the probabilities of their being accidental would be incalculable. You know it as well as I; otherwise you wouldn't be here."  
"Very true," Markham had seated himself facing the professor. "We're confronted by a terrific problem. Moreover, Mrs. Drukker died of shock last night at almost the same time her son was killed."  
"That, at least," returned the old man after a pause, "may be regarded as a blessing. It's better she didn't survive him—her mind unquestionably would have collapsed." He looked up. "In what way can I help?"

"You were probably the last person, with the exception of the actual murderer, to see Drukker alive; and we would like to know everything you can tell us of what took place last night."  
Professor Dillard nodded.  
"Drukker came here after dinner—about eight, I should say. Pardee had dined with us; and Drukker was annoyed at finding him here—in fact, he was openly hostile. Arnesson twitted him good-naturedly about his irritability—which only made him more irritable; and, knowing that Drukker was anxious to thrash out a problem with me, I finally suggested that he and I stroll down to the park. . . ."  
"You were not gone very long," suggested Markham.  
"No. An unfortunate episode occurred. We walked up the bridge path to almost the exact spot where, I understand, the poor fellow was killed. We had been there for perhaps half an hour, leaning against the stone balustrade of the wall, when Pardee walked up. He stopped to speak to us, but Drukker was so antagonistic in his remarks that, after a few minutes, Pardee turned and walked away in the direction he had come. Drukker was very much upset, and I suggested we postpone the discussion. Furthermore, a damp mist had fallen, and I was beginning to get some twinges in my foot. Drukker straightway became morose, and said he didn't care to go indoors just yet. So I left him alone by the wall, and came home."  
"Did you mention the episode to Arnesson?"

"I didn't see Sigurd after I got back. I imagine he'd gone to bed."  
Later as we rose to take our leave, Vance asked casually: "Can you tell us where the key to the alley door is kept?"

"I know nothing about it, sir," the professor replied irritably, but added in a more equable tone: "However, as I remember, it used to hang on a nail by the archery-room door."  
From Professor Dillard we went straight to Pardee, and were received at once in his study. His manner was rigid and detached, and even after we had seated ourselves he remained standing by the window, staring at us with unfriendly eyes.  
(To be continued.)

### Frost Thwarted

The farmer may now get a chance to fool Jack Frost. Experimental work at Morden, Man., by the Dominion Department of Agriculture shows conclusively that on a soft crop like tomatoes this can be done. With the advance of the season tomatoes ripen more slowly, and the use of ethylene gas speeds up the process from late August on. Fruit in danger of frost damage can be picked and quickly ripened by the use of this gas.

Playing golf is more dangerous than travelling by train, according to the accident statistics of one big American insurance company.

### Expert Gives Advice To Future Salesmen

"It is essential that you should like to meet people and possess the ability to get along well with them if you are to become a salesman," says an expert in giving his idea of how youths should pick their life job.  
"You don't necessarily have to be of the hail-fellow-well-met type, but you do need to be agreeable and have personality."  
"But above those qualifications you should have another. You must make people have confidence in you. If you make people have confidence in you, you will find that you will have an asset greater than any other. If business men can believe in you they will trade with you. Confidence breeds respect."  
"Then you will need self-confidence and poise, and if you are to get ahead you can't be of the type that is easily discouraged. You should be a good judge of human nature in order to size up the people with whom you deal."  
"You should realize at the outset that your job will be to sell what the buyer can use profitably, or can dispose of in turn. You will not be approaching your task in the proper light if you try to dispose of your wares for the sake merely of an immediate sale. To be a good salesman you must think in terms of your customer's problems as well as your own."  
"Get all the education you can. It isn't necessary that you have a college education to be successful as a salesman. But if you can obtain the advantage of such training, do so by all means. There is only one good place for you to start, and that is the bottom."

"What came before? Captain Jimmy and his friend Lieut. Jed Stone plan to rescue Guy Stone from the cruel Chinese bandits. They bargain with General Fu for his assistance, in exchange for flying him over to Japan."  
"We worked secretly on our plane for several days, changing it to look like a fire-eating dragon. The body, which would glow green in the dark, while a long dragon tail was attached behind. We painted bat-like marks on the wings, and wicked-looking claws spread out underneath. Even in the daytime our plane looked horrible enough, but at night, 'it was enough to freeze any ignorant bandit camp with fear."  
Of course, that is just what we intended our plane to do. While the bandits fled in terror, we would have a chance to rescue Guy Stone, the brother of Lieutenant Stone, who had been held captive for many weeks.  
Just for safety, we mounted a machine gun in front of our plane. If any Chinese proved too hardy to be afraid of our dragon, he would certainly understand enough not to fool with a machine gun.  
As the sun sank toward the western sky line, we wheeled our plane out of the hangar, and soon were heading full speed toward the cruel Chinese bandits' camp. We timed our raid so we would arrive just after dark, while the bandits were still asleep.  
As we passed over the countryside, the poor Chinese families bearing the drone of our motor rushed to the doors of their hovels. Seeing our dragon glimmering in the sky, with its bat-like wings spread out, and long tail flying behind in the wind, they fell on their knees and buried their faces in their hands.  
We followed the railway tracks, and soon we came to the siding where we hid from the bandits in the string of freight cars. Due East from that point, we followed the trail into the mountains. The campfire of the bandit guards at the notch in the cliffs proved a welcome

beacon, for the sky grew darker every minute, and thunder rumbled in the distance.  
Soon the main camp became visible. The little tents looked like Chinese lanterns far below, as we circled slowly down, and red campfires dotted the ground. Somewhere down in the pit of darkness was Guy, Jed Stone's younger brother. As we circled overhead, there flashed before my mind's eye a picture of the days when as boys together, we played on the old ranch out near Wimipeg.  
Suddenly the bandits saw us. Panic broke loose in the camp. Black forms rushed about—tripped, fell and fought each other, frantic with fear. I switched on the landing lights and turned on the siren whistle. The sound waivered and echoed through the mountain pass. The terror was complete!  
Landing on the ground, we roared down toward the tents. The entire force of bandits seemed to have deserted and had taken to the forest. Then a dark form rushed toward the tents with a flaming brand from the fire.  
One bandit, braver than the rest, was attempting to set the tents ablaze. We fired a few rounds from the machine gun, and evidently winged him in the foot, for he dropped the brand, and limped into the darkness.  
"Hurry," I cried, "we must search the tents before they are burned. Keep the motor idling while I search. Use the machine gun if the bandits return."  
Over the side I went and dashed into the first tent. The crack of rifles sounded far away in the darkness. Spat! Spat! went the bullets in the sand, but the range was wide. Then I heard Jed Stone open fire with his machine gun.

## The ADVENTURES of CAPTAIN JIMMY and his Dog SCOTTIE

What came before? Captain Jimmy and his friend Lieut. Jed Stone plan to rescue Guy Stone from the cruel Chinese bandits. They bargain with General Fu for his assistance, in exchange for flying him over to Japan.

We worked secretly on our plane for several days, changing it to look like a fire-eating dragon. The body, which would glow green in the dark, while a long dragon tail was attached behind. We painted bat-like marks on the wings, and wicked-looking claws spread out underneath. Even in the daytime our plane looked horrible enough, but at night, 'it was enough to freeze any ignorant bandit camp with fear.

Of course, that is just what we intended our plane to do. While the bandits fled in terror, we would have a chance to rescue Guy Stone, the brother of Lieutenant Stone, who had been held captive for many weeks.

Just for safety, we mounted a machine gun in front of our plane. If any Chinese proved too hardy to be afraid of our dragon, he would certainly understand enough not to fool with a machine gun.

As the sun sank toward the western sky line, we wheeled our plane out of the hangar, and soon were heading full speed toward the cruel Chinese bandits' camp. We timed our raid so we would arrive just after dark, while the bandits were still asleep.

As we passed over the countryside, the poor Chinese families bearing the drone of our motor rushed to the doors of their hovels. Seeing our dragon glimmering in the sky, with its bat-like wings spread out, and long tail flying behind in the wind, they fell on their knees and buried their faces in their hands.

We followed the railway tracks, and soon we came to the siding where we hid from the bandits in the string of freight cars. Due East from that point, we followed the trail into the mountains. The campfire of the bandit guards at the notch in the cliffs proved a welcome

beacon, for the sky grew darker every minute, and thunder rumbled in the distance.

Soon the main camp became visible. The little tents looked like Chinese lanterns far below, as we circled slowly down, and red campfires dotted the ground. Somewhere down in the pit of darkness was Guy, Jed Stone's younger brother. As we circled overhead, there flashed before my mind's eye a picture of the days when as boys together, we played on the old ranch out near Wimipeg.

Suddenly the bandits saw us. Panic broke loose in the camp. Black forms rushed about—tripped, fell and fought each other, frantic with fear. I switched on the landing lights and turned on the siren whistle. The sound waivered and echoed through the mountain pass. The terror was complete!

Landing on the ground, we roared down toward the tents. The entire force of bandits seemed to have deserted and had taken to the forest. Then a dark form rushed toward the tents with a flaming brand from the fire.

One bandit, braver than the rest, was attempting to set the tents ablaze. We fired a few rounds from the machine gun, and evidently winged him in the foot, for he dropped the brand, and limped into the darkness.

"Hurry," I cried, "we must search the tents before they are burned. Keep the motor idling while I search. Use the machine gun if the bandits return."

Over the side I went and dashed into the first tent. The crack of rifles sounded far away in the darkness. Spat! Spat! went the bullets in the sand, but the range was wide. Then I heard Jed Stone open fire with his machine gun.

## What New York Is Wearing

BY ANNEBELLE WORTHINGTON

Illustrated Dressmaking Lesson Furnished With Every Pattern

The princess slip is indispensable in the smart woman's wardrobe to wear with the slim silhouette frocks. The moulded line of this slender model hugs the figure to well below the hips where it starts to widen so as to have a comfortably full flaring hemline.  
Its unbroken line from shoulder to hem does away with any conflicting lines to the outer garment, that so often entirely ruin an otherwise perfectly charming appearance.  
It's easily made! A few seams to join! The hem may be finished with picot-edging or binding.  
Style No. 2668 may be had in sizes 16, 18 years, 36, 38, 40 and 42 inches bust. The 36-inch size requires 2½ yards of 35-inch material with 2 yards of binding.  
It's very French in flesh-colored crepe de chine with pale blue binding at neck, armholes and hem.  
Flat crepe silk and crepe satin also suitable.

HOW TO ORDER PATTERNS  
Write your name and address plainly, giving number and size of such patterns as you want. Enclose 20c in stamps or coin (coin preferred); wrap it carefully for each number, and address your order to Wilson Pattern Service, 78 West Adelaide St., Toronto.

The Way o' the Scot  
Sandy entered the saddler's shop. "I want one spur," he ordered.  
"One spur, sir?" said the saddler.  
"Of what use is one spur?"  
Sandy shrugged his shoulders impatiently, and went on to explain.  
"Can't ye see, mon," he said, "if I can get one side of the horse to go with one spur, the other side will have to come with it!"

## Borden's Chocolate Malted Milk

The health-giving, delicious drink for children and grown-ups. Pound and Half Pound tins at your grocers.

## Modern Palate Not So Spicy

Survey Shows Spices Less in Demand in Today's Menu

One result of changing taste in food and of marked decrease in home cooking in America has been a sharp drop in the consumption of spices. Americans are using one-fifth less spices today than they did in 1923, and although consumption of vanilla beans, paprika and mustard has increased recently, the general loss has been heavy. Pepper, cassia, cloves, ginger, root and cinnamon are among those whose popularity seems to be waning.

How can this decrease in consumption be accounted for? First of all, according to Albert H. Doolittle, who conducted a survey for the American Spice Trade Association, there is evidence that the public taste for spices is changing again. When they were first introduced into Europe from the East they were considered a delicacy, but their popularity increased rapidly until by the end of the fifteenth century they lured Columbus and others to risk the unknown Atlantic in the hope of finding an ocean route to their source, the Indies. Thus the desire for spices and other Oriental luxuries, such as silks, perfumes and jewels, led to the discovery of America and six years later induced Vasco da Gama to make his pioneer voyage around the Cape of Good Hope.

Spices were and continued to be in great demand because they gave variety to food. Until comparatively recent years most housewives relied upon a few foods and were therefore dependent upon spices to give zest to a diet that might otherwise have become monotonous. Today they vary the foods rather than the spices.

Another cause of the decreased use of spices is said to be a falling off in pickling and preserving because of the development of transportation and of processing, rapid freezing and vacuum methods of preserving natural flavors.

A village of 500 inhabitants in Northern Siberia had never, until quite recently, heard of the Great War or the death of the Czar; they had no knowledge of Soviet ideas and a woman was their chief judge.

Out of every 33 British railwaymen, one was killed or injured while on duty during 1929.

Mable—"Where are you going this summer for a rest?"  
Madge—"A friend of mine told me of a lovely place where they do nothing but play golf all day and bridge all night."

His Strong Point  
"What's a genius, munn?" asked little Ernest.  
"Well," pondered his mother, "suppose a genius is a very clever person."

"I'm one, then," went on the boy.  
"My teacher said so."  
"Of course you are, my son," she said encouragingly. "But what did your teacher say?"  
"She said I had a genius for inventing," explained Ernest.  
"And what did she say you could invent?" asked the fond parent.  
"New ways of spelling words," came the reply.

Fuel oil, which is safe and costs only 4d. a gallon, is to replace the more expensive petrol in a new aeroplane engine now being built by a famous firm.

## HEADACHES

Needless pains like headaches are quickly relieved by Aspirin tablets as millions of people know. And no matter how suddenly a headache may come upon you, you can always be prepared. Carry the pocket tin of Aspirin tablets with you. Keep the larger size at home. Read the proven directions for pain, headaches, neuralgia, etc.

Made in Canada. ISSUE No. 28-'31

## A JOY STORE

Grace Archbold

Not long ago, I felt like my lot to take a little family of stephens and neices to their parents who were settling out west. A friend of mine, the mother of four children, found time to see me off. As she bade me farewell, she handed me a mysterious looking bag. In the excitement of departure, I tucked it away and promptly forgot all about it.

The novelty of the train soon wore off with the children, who were already tired out by the wretched atmosphere of those last few days.  
"What can I do, Auntie?" wailed a plaintive voice.  
The question was repeated more and more insistently. Our neighbors frowned and fidgeted until I began to feel conspicuous and uncomfortable. In desperation I stared about in our numerous packages and finally came across the forgotten parcel. It contained all kinds of amusements for the little ones. Imagine my relief! There was a neatly labelled surprise for each day of the journey. Such a delightful variety!

That parcel made all the difference in the world to us. Instead of the trip being a tedious affair, we were able to enjoy it. The interesting spots on the way were a delight because the children were happy. Some grown ups were attracted to our group and were glad to watch the children solve their puzzles and to join in their very rare fun.

As the train moved over the sparsely settled country I thought of the difficulties of many a mother there, trying to bring up a young family in a home without neighbors. How would my sister manage after the resources of a large city?

"I know what I will do," she remarked, when I was telling her about our experiences, some days after our arrival. "Why not work out the same idea for emergencies in daily life?"

That was the beginning of her "Joy Store" as the children called it. I remained on with her for several weeks and together we put in the first items.

She had the good fortune to possess an old family chest with a quaint gilt padlock attached. In it we put all sorts of contributions, keeping one division for girls, the other for boys. It is astonishing if you bear such a purpose in mind, how the treasure accumulates. For instance, when we were sewing, an otherwise useless remnant was cut into a doll's garment ready to be worked upon by small fingers. Odd crayons and pencils were saved, pictures to cut out or color were collected. Beads were put in a box with needle and thread and bright bits of note-paper, on which the children would like to draw or to write letters in their own particular style to enclose in Mother's letter to Grandmother, were put in the chest. A short story, culled from a magazine or newspaper, which we knew would have a special appeal to Jack or Freddy, was made more personal by printing the boy's name upon it. This individual touch was used often, as we knew it would draw interest at once. The blessings we put in that box were endless.

Of course these treasures were not intended to interfere with the usual allotted tasks of each child, but to save awkward situations, to avert quarrels on wet days, and to relieve the tiresome periods of convalescence. Then, again, they would prove a boon before a m. l. unavoidably delayed, when the appetite is sharp and the tongue sharper.

My sister, writing me later, spoke of being able to add frequently to her "Joy Store" and said it was the greatest help to her. She did not make too constant an inroad on it, and she kept a second box as a depository for games or articles that could be used continuously.

This certainly is one way of avoiding the eternal "don't, don't," which everyone agrees, nowadays, spells ruin to the disposition of a child. It is a salvation, when the cry, "What can I do, Mummy?" comes as the last straw to the ears of a driven parent—issued by the National Kindergarten Association, 8 West 40th Street, New York City. These articles are appearing weekly in our columns.

Our Summer Guest  
A little box—  
A little pain—  
A little roof—  
In case it rains;  
A door for invitation;  
A pretty spot—  
Among the trees;  
A glint of sun,  
A pulsing breeze;  
A lover's dedication.

A little pair—  
Of weary wings;  
A happy heart,  
A voice that sings;  
In love's anticipation;  
The eager quest;  
Of cunning eyes;  
A sudden halt;  
In high surprise;  
Shrewd investigation.

A sideways fit—  
A tilted peep;  
Delight! A covert  
Smug and deep—  
No more of hesitation.  
A mate! A gleaming—  
Twig and twine—  
A cosy nest  
Of quaint design;  
A little habitation.

—By W. Clark Sanderson, in "The New Outlook."
