How would it do to compel a driver Sault Star.

Double Reform.

It has been found by actual exper ence that moving a slum population into a reconstruction area does not change the slum dweller's habits. In Holland experiments have been made, which Britain will probably follow. There, certain areas were destroyed and the slum dwellers were kept segregated and not simply allowed to go elsewhere to form other slums. stead they were put through a period of training so that when they were placed in the reconstruction areas they were prepared for the changed environment.-Halifax Chronicle,

The Steam Whistle,

Another railway centenary is at tained this year-the whistle on the engine. When the steam engine first ran on tracks in England the engineer sounded a warning by means of a horn. But the sound did not penetrate very far, and the railway people steam engine, George Stephensonand asked him to produce something more effective. So about six years phenson invented the whistle that would blow by steam from the boiler. -St. Thomas Times-Journal.

Hasty Marriages.

The Presbyterian Church in United States has made a new church law ably desirable that former Rhodes vent any hasty marriages. The main trouble with marriage today is that It is too easy.-Lindsay Post.

Odd Accidents.

The Galt Reporter tells of a peculiar Hamilton Herald.

Newsprint Upturn.

Newsprint makers are hoping tha if general business improvement continues it will be reflected in larger sales for them and the growth of output in the last couple of months appears to point that way.

An upturn in production was noted in April and in May there is understood to have been a further increase, with prospects that June's production will show still a further advance. The industry, is, of course, over-

expanded and it will be a long while yet before the demand approaches the mill capacity, but as the business pick-up in Canada and the United States is reflected in more advertiing the demand for newsprint paper will increase, with a corresponding bene-Sault Ste. Marie Star.

Will Grasshoppers **Become Plagues**

Canadian Climatic Conditions Differ from Far East-Hoppers Need Two Generations to Develop

Migratory Wings Manitoba has figured in the news of the day recently when vast hordes of grasshoppers invaded the countryside and lakes. Consequently the important question of the possibility of Canadian grasshoppers imitating these of the Old World and evolving into the migratory species, is raised.

The late Norman Criddle, writing in the "Canadian Entomologist" reviews this point very thoroughly and slender, race-horse bodies capable of long flight, it would appear that the migratory species of the Old World retransition stage."

Increased Activity In Manufactures

In the Dominion Dominion Bureau of Statistics Notes Recent Improvement

Canadian manufacturers have this year shown a tendency towards great er activity, this being particularly evident in recent months. An improvement in manufacturing is, of course of significance owing to the increasing importance which manufactures have achieved in Canadian economic life. This is shown by the rapid growth of manufacturing industries ir the post-war development of the Dominion, and also by the relative rise of manufacturing products as an element in export trade. The worldwide reaction of the past few years has, naturally, been reflected in lessmany Canadian grasshoppers have ened values for the products of Cangrowing longer wings and developing that the decline was obnormal and this branch of Canadian industry. Evidence of the recent improvement

in manufacturing in Canada is provelop under certain climatic condi- vided by the indices of physical voltions, which apparently are absent in ume of production computed by the Canada and that in Canada the trans- Dominion Bureau of Statistics.
