

...SMILES...

One young lady says the only way she can bring her thrifty sweetheart to his knees is to drop a penny on the floor.

Teacher—"Junior, give me the definition of a skeleton?" Junior—"A skeleton is a man with his insides out and his outsides off."

Folks who insist the world owes them a living as a rule are too lazy to go out and try to collect the bill.

Teacher—"Now, if I write 'n-w' on the blackboard, what does that spell?" Bright Beatrice—"New."

Teacher—"Now I'll put a 'k' in front of it and what have we?" Bright Beatrice (quickly)—"Canoe."

Many a man who seems quite sure he can tell others how to make money seems able to make any himself.

Dear Colym: We've got eight children at our house now. Do you think that's too many for a family nowadays?—Northside Willie.

Answer: Yes, I'd say with conditions as they are now, you're a trifle over-stocked.—The Colym.

Mother—"Glady, I saw that young Adams boy kiss you! I didn't think he would dare do such a thing!" Glady—"Nor did I. I fact, I bet him a pack of cigarettes he wouldn't."

Sam—"That doctor isn't much good or he wouldn't keep you here in this climate to convalesce; he'd send you to California."

Jim—"He certainly is a good doctor, and what's more, he's smart. I haven't said him yet."

Nobody loves a fat man—except his grocer.

Teacher (in bookkeeping) — "What is a debtor?" Junior Student—"A man who owes money."

Teacher—"And what is a creditor?" Junior Student—"A man who thinks he is going to get it back."

The angler had just landed a catch when the inquisitive woman chanced to be passing.

"Oh," she exclaimed, "that poor little fish!"

The angler replied: "Well, madam, if he'd kept his mouth shut he would not have got into trouble."

Two burglars had experienced great trouble in breaking open a safe. At last they succeeded. "Strewth, Bill," gasped one, "it's full of coppers."

"Yes," said Bill, peeping through the window, "an' so's the street."

"Now you men," roared the sergeant-major, as he dismissed the company, "you will parade again at two o'clock precisely. And when I says two o'clock precisely, I don't mean five past. I means five to."

First Cinema Actor—"Fancy that pistol being loaded by mistake! Jolly rotten for you, old man."

Second Actor—"Oh, I wouldn't have minded that so much, but the director shouted: 'That's not the way to fall when you're shot, you idiot!'"

Fond Mother—"I hope my little darling has been as good as gold all day."

Nurse—"No, ma'am, he went off the gold standard about nine o'clock."

Grocer—"What can I do for you, ma'am?"

New Bride—"I'm not sure. What are they eating this fall?"

A high-powered salesmanager who was known for his stilted letters was invited out in the country to dinner one Sunday recently. He was asked by his genial host to say grace at the meal. This was a new experience to him but he was game.

"We are extremely appreciative of our favors of recent date. Permit us to express our heartfelt thanks and deep gratitude. The blessings received will have our usual prompt attention. We trust we may continue to merit your confidence and that we shall receive many more blessings from you in the future. Yours very truly."

PROFITS IN NATURAL GAS. Huge dividends are being distributed to shareholders of companies operating in the prolific Natural Gas Fields of South Western Ontario. A great public utility, serving over half a million Canadians, offers you a greater avenue of monetary reward in a shorter time than almost any other medium of investment.

EMPIRE NATURAL GAS LIMITED TORONTO

The Dominion Coast To Coast. Halifax, Nova Scotia.—An increase of over 8,000,000 pounds in the landings of fish in the Maritime Provinces in June, compared with landing during the same month last year, is reported by the Eastern Division of the Department of Fisheries.

Fredericton, N.B.—According to Mr. Allan King, Manager of the Minto Coal Company, Minto, N.B., the coal mining industry of the province is busier than it has been for fifteen years, and is now working at 100 per cent. capacity.

Montreal, Quebec.—The recent rapid increase in the demand for electric washing machines in place of the hand-worked variety is shown in the latest report on the industry from Ottawa. From 1927 to 1932 inclusive electric machines were turned out in Canada at the rate of three to one of the other kind, the number of electrically driven machines made during the period being 345,051 compared with 105,289 hand and 13,905 other power machines.

Toronto, Ont.—Cattle receipts for the first seven months of 1933 at the Union Stock Yards, Toronto, were about the same as those for the same period last year, comparisons being as follows:

Table with 2 columns: Year (1933, 1932) and various livestock types (Cattle, Calves, Hogs, Sheep, Horses) with corresponding counts.

Brandon, Man.—The Manitoba Provincial Exhibition in 1934 will be held in Brandon from July 2 to 6, according to a definite agreement entered into on dates by members of the Western Canada Class A Circuit. This city will, as usual, start the circuit, and only one change was made in the dates. Due to the World's Grain Exhibition and Conference, Saskatoon followed Regina in 1933, but next year the old order will be resumed with Calgary, Edmonton, Saskatoon and Regina holding their shows after Brandon.

Moose Jaw, Saskatchewan.—An illustrated booklet dealing with the city of Moose Jaw, compiled by the Board of Trade, shows that this important wheat and cattle-raising centre is progressing and consolidating in a number of directions—industrially, commercially and socially. With a population of 21,300 in the city itself, there are 12,000 farmers within a radius of fifty miles. As a manufacturing centre Moose Jaw stands in first place in the Province of Saskatchewan, with a production of \$535 per capita.

Lethbridge, Alberta.—Tests made of the Roney-Nordon Twin River oil well south of Lethbridge are reported to show that the well is good for fifty barrels of clean oil a day, with a gas flow of around 5,000,000 cubic feet. The oil was turned into tankage and flowed at the rate mentioned, and in the hope of increasing production it has been decided to shoot the well to crack up the porous lime to enable the oil to flow more freely. The well is free from water.

Calgary, Alberta.—According to Mr. L. R. Hess, general manager, the Calgary plant of the Canada Maltting Company has been running twenty-four hours a day to supply malt to United States breweries since beer was legalized in that country. Extra labor has been engaged, and between 75,000 and 90,000 bushels of barley will be required each month for the malt supply, a boon to Alberta barley growers.

Victoria, B.C.—A Dominion Geographical Survey Report announces that vanadium of appreciable value has been identified in a primary copper ore body on Quadra Island, near Victoria, in the form of a finely banded,

siliceous, carbonaceous material, one to four inches thick and carrying some thin, greenish copper stains. On analysis one sample yielded 3 per cent. vanadium and another 2.16 per cent. or 50 pounds and 43 pounds to the ton respectively. At present prices this works out at \$180 and \$125 to the ton. Vanadium is a pale grey metal with a silver lustre, and, like chromium, is valuable for mixing with iron to make a high grade steel.

A FRIEND. Comment me to the friend that comes When I am sad and lone, And makes the anguish of my heart The suffering of his own; Who calmly shun the glittering throng At pleasure's gay levee, And comes to rild a sombre hour And gives his heart to me.

Comment me to that generous heart Which, like the pine on high, Uplifts the same unvarying brow To every change of sky; Whose friendship does not fade away When wintry tempests blow, But like the winter's icy crown, Looks greener through the snow.

He flits not with the flitting skork That seeks a southern sky, But lingers where the wounded bird Hath laid him down to die. Oh, such a friend he is in truth, What'er his lot may be, A rainbow on the storm of life, An anchor on its sea.

The Racket of Rubber Bees. Although honey stealing by bees is likely to be most troublesome in late summer, the beekeeper has to keep in mind that robber bees may start their racket at any time. In warm weather when there is little or no honey to be got from the flowers, the bees will easily yield to any temptation to obtain it anyhow. After more or less fighting they will overpower any very weak colonies, and carry the honey to their own hives. Old robber bees have a shiny appearance, the hair having become worn off with entering so many different hives. No colony should be allowed to grow weak, says the Dominion Aparist, and no honey or syrup should be exposed in the apiary.

New German Program Encourages Motorists. Germany's Chancellor Hitler has positive ideas about the transportation industry, and to show where he stands in the matter, has removed the once heavy tax on new automobiles. Also being convinced that mass highways were much needed, he has started work on these modern arteries of travel. Hitler's highways are minus curves wherever possible, and to handle traffic in two directions, on paved surfaces each 27 feet wide, separated by a strip 15 feet in width.

Survey of Scottish Coast is Planned by Lindberghs. Stockholm, Sweden.—Colonel and Mrs. Charles A. Lindbergh plan to fly to Scotland shortly, via Amsterdam, Holland, for a survey of the Scottish coast, it was understood last week. They recently completed an aerial survey of a possible air route over the North Atlantic.

Lindbergh said it was unlikely they would fly the Atlantic again this season. They probably will dismantle their plane and return to the United States on a liner.

Faith. Faith has been customarily portrayed as one of the gentle graces: as a lovely feminine figure with gentle face, slender, graceful physique, clad in easy flowing robes. Such a portrayal is not altogether appropriate. Faith ought to be represented as a masculine figure; strong, athletic, daring, with eyes of fire, with muscles of steel, with will of iron, with every faculty in full control; not quiescent but in intense action. Faith is trust, but it is more. It is action on the basis of what is believed. It is daring; it is courageous; it is full of initiative. To conceive of faith as a passive attitude of mind, is to mistake its real nature. Where there is real faith the whole man proceeds to act. Art in picturing faith as feminine, has not been profoundly true to the New Testament. Faith has more masculine than feminine qualities.

Common Days. God keep us through the common days, The level stretches, white with dust, When thought is tired, and hands up-raise Their burdens feebly, since they must. In days of slowly fretting care, Then most we need the strength of prayer.

—Margaret E. Sangster. In order to see into mankind, into life, and still more into ourselves, suffering is requisite.—Richter.

Have faith in yourself whether others believe in you or not.

SHE LOST WEIGHT EACH WEEK. The Ideal Way to Reduce. A woman writes to tell how she is reducing excess fat—and her way seems to be the ideal way.

"I am 59 years old, 5 ft. 5 1/2 in. in height, and was 190 lbs. when I started taking a large jar of Kruschen-Salts every morning. I went slowly down in weight—some weeks 2 lbs., others just 1 lb., until I got down to 154 lbs. I have never felt better in my life than I do now, and I feel so much lighter and feel years younger."

—(Mrs.) W. I. The action of Kruschen Salts, taken regularly every morning, is to effect a natural clearance of undigested food substances and watery waste matter. It is that waste matter which is stored up in the form of ugly fat, if it is not regularly expelled.

Novel Treatment Curbs Insanity

Experiments With Endocrine Gland Hormones in Illinois Give Highly Beneficial Results

Chicago.—Science's newest weapon against disease, the hormones of the endocrine glands, are helping to win its fight to reduce incurable insanity, it is indicated in a report in the Illinois Medical Journal by Dr. James H. Hutten, of Chicago.

Nearly 27 per cent. of 172 insane patients who received glandular treatment in addition to psychiatric routine were sent home, Dr. Hutten reported, while discharges from state hospitals as a whole ran only 17 per cent.

The patients were given the novel treatment in a two-year study of the relation of endocrine disorder to insanity conducted at the State Hospital for the Insane at Elgin, Ill.

The beneficial results of the extra treatment were such that it has been made a regular part of the treatment, the report adds, and a similar policy is urged for all state hospitals.

The endocrine glands include such structures as the pituitary as the base of the brain, the thyroid, gonads, parathyroids and adrenals, controlling most of the vital processes.

The study of their relation to insanity was prompted by the rapid increase in insanity in Illinois evidenced by a rise from 57 for each 100,000 of population in 1880 to 369 in 1931. In the last ten years the population of the state has risen 18 per cent. and its insane 33 per cent.

Ardent Champion Of Saskatchewan

Prince Albert, Sask.—Why move farmers from southern prairie drought areas to Northwestern Ontario, when Northern Saskatchewan offers plague-free settlement areas as good as any in the Dominion? This question was asked by Mayor H. M. Sibbald, of this city, when informed of the resolution passed at the Northwestern Ontario Chambers of Commerce convention in Fort Frances urging the study of the possibility of moving dry-area farmers from Saskatchewan and Manitoba to Northwestern Ontario.

"Without Government intervention," Mayor Sibbald remarked, "thousands of farmers have come into this city's trade territory from drought-stricken areas. There is room for thousands more where droughts, plagues and crop failures are equally as unknown as in Northwestern Ontario."

After London, Manchester had the most motoring offences last year, with 14,513 cases. At the other end of the scale came Tunbridge Wells, with forty-nine, Dover with forty, and West Hartlepool with only twenty-eight.

Of the fatal road accidents which occurred in Gt. Britain, the greater proportion happen in built-up areas, and only twenty-five per cent. in open country. Comparatively few occur in really dense traffic, even in the London area.

Measuring six feet in width and twenty feet in length, London's smallest house is situated in Hyde Park place. It has a hall and one room on the ground floor, and two more upstairs reached by a narrow iron ladder.

"My father is a wash-out," was the reply of a school child in Ladysmith in answer to a question. It proved that the parent was employed in washing out boilers at the engine sheds, "wash-out" being his official designation.

"Thirty" vessels of the German Fleet, which was scuttled in Scapa Flow, have been salvaged after nine years' work. The remainder will be left where they sank, as they are not worth raising owing to the drop in value of scrap metal.

Visitor to Pitcairn Writes Impressions

A visitor to Pitcairn, a British island in the Pacific, gives her impressions of place and people. "The strangers are good-looking, tall, straight and lean, with skins varying from olive to dark brown; and eyes and hair mostly black, though here and there I saw a head of brown and clear blue eyes, which told of European origin."

"They spoke good English with soft, well-modulated voices, and their smiling good humor and charming manners won all our hearts. "The men were dressed in cotton singlets or shirts and dungaree trousers; the women in cotton frocks of pinaflore style; one, evidently the 'Belle of Pitcairn,' in a bright pink silk sleeveless confection, with shoulder cape. I saw no stockings and very few shoes. All wore native-made raffia hats, except one or two who said proudly that their hats had come from Panama—the Paris of Pitcairn—but nearly 4,000 miles away."

"I asked a nice-looking woman with a rather sad face if she would not like to go away from the island. 'Yes, lady,' she said, 'but how can I? I have no money.'"

'Tis Better Than None. Chicago.—A shy, effeminate youth with a lip in his speech held up Peter Damiani, 17, and Myrtle Wilkinson, 23, as they sat in an automobile in front of Damiani's home. He looked at the change Damiani handed him, quietly remarked that "thirty thoughts flit the much but it thomething," and slipped away.

Religion. Religion is a necessary, if indispensable element in any great human character; it is the tie that connects man with his Creator, and holds him to His throne.—Daniel Webster.

If for some of us action cannot mean doing, then remember bearing, too, is action, often its hardest part.—W. C. Gannett.

"The history of all education seems to be a continual cycle of knowledge getting overlaid more and more by mere opinions."—Lord Eustace Percy.

CLUB CHEWING TOBACCO. The compass assures the safety of the navigator while Club Chewing Tobacco assures him of a richer, longer-lasting chew. YOU MIGHT AS WELL CHEW THE BEST.

Claims Short Waves Cure Many Ills

German Doctor-Scientist Tells of Experiments With Wireless

London, Eng.—Cures for various ailments by the use of short wireless waves are claimed by Dr. Erwin Schliephake, a German physician and scientist.

Writing in the British Medical Journal, he describes how after long study and experimentation he has succeeded in treating deep-seated abscesses in the human body by passing ultra-short wireless waves through the patient, who was not in immediate contact with any instrument.

He found, he said, that various tissues exhibit entirely different degrees of conductivity in the presence of these waves, which act in characteristic ways according to the wave lengths. Many of the effects were said to be quite selective.

Dr. Schliephake declares he has used waves to treat pulmonary abscesses after pneumonia, in pleural empyema, pneumonic tuberculosis, in certain forms of peritonitis, in migraine (where waves of 15 metres were reported most satisfactory) and acute tonsillitis.

The Record "Mammoth Cheese". One of the exhibits at the New York State Fair at Syracuse is to be a "mammoth cheese" weighing 12,000 pounds, that is expected to open the eyes of the natives, writes The Brockville Recorder.

But, as a correspondent of the Montreal Gazette points out, this cheese, large though it is, will be a mere pygmy in comparison with one that Canada sent to the World's Fair in Chicago 40 years ago and that cheese, it is worth remarking, was a product of the eastern part of Ontario, still famous for its dairy production.

"This reminds me," writes G. A. Marston, of Montreal, to the Gazette, "of the mammoth cheese from Canada which formed part of the Canadian exhibit and which I saw at the World's Columbian Exhibition at Chicago in 1893. This enormous mass of cheese was manufactured at the Dominion Experimental Dairy Station, at Perth, Ont., under the supervision of Prof. James W. Robertson, who was then acting as Dominion Dairy Commissioner. As much as 207,200 pounds of milk were used in making it, that quantity being equal to the milk of 10,000 cows for one day in September. The cheese weighed 22,000 pounds net. It was encased in the mould or hoop of steel in which it was pressed and a pressure of more than two hundred tons was applied to make it perfectly solid. It measured 28 feet in circumference by six feet in height. A special truck was made for transporting it through Great Britain after it left Chicago. It was later sold to Mr. T. J. Lipton, of London, England, who exhibited it as a feature of his business in every large city of Great Britain and Ireland."

Syracuse Fair may have its 12,000-lb. cheese, but Canada made and displayed one of 22,000 lbs. 40 years ago. And that record does not seem to have been exceeded since that time.
