Eye Prepares Own Vitamin

Substance Is Manufactured From Pigment Like Corn Coloring

Wood's Hole, Mass .- The human eye manufactures for itself the vitamin A without which it could not

It has been observed in the act by Dr. George Wald, who described the process to a seminar of scientists at the Marine Biological Laboratory. He made his investigations at Heidelberg and the University of Chicago.

Dr. Wald reported that the vitamin is manufactured from a yellowish pigment in the visual purple, a chemical secreted in the retina. The newly discovered pigment has been named retinene. It is similar to the carotene which gives corn and carrots their yellow color and provides the body with a more familiar source of vitamin A.

This was the first time any vitamin's chemical activity had been observed in the human body.

Vitamin A's importance to human vision, like the visual purple, has long been known. "Night blindness," a fairly common trouble, followes a deficiency of the vitamin and some-

Doubled Up With FINANCIAL Rheumatism

Could Not Wash Himself Nor Brush His Hair

So bad was his rheumatism that his friends declared he would never work again. Although he is 70 years old, he proved they were wrong. Read what he says:-

"I am seventy years of age. Last Christmas I was completely doubled up with rheumatism. I could not brush my hair nor wash myself. Father is so sick of the neighbor- People said I should never work any more. I am working harder than a young man today. Thanks, many thanks to Kruschen Salts. I take them in my tea, and I have recommended them to many. I could not get in or out of bed myself, nor sit favorable markets with rising price be constructed. up. But see me work now-12 hours levels for the white metal. a day sometimes. Kruschen Salts have done it."-G. J.

Silver Holds Attention Keen interest is still evident

the price for the "white metal" and earlier forecasts of higher prices seem to be materializing. The price in both London and New York has hit a new high point for over five years, and further advances are being anticipated by producers and economists. Buying by the United States government is undoubtedly the main factor in the present advance and as they have only purchased a comparatively small proportion of the amount necessary to bring their currency backing up to the 25-75% ratio as authorized by President Roosevelt earlier in the year. The President's recent speech did not make mention of either gold or silver so that the way appears to be left Since Cobalt, thirty years ago, the worked three have reached an advanc- clear for further inflation.
