Fly 600 Tons To Aid Mine

Freight Planes Carry Heavy Machinery Over Andean Heights

In June 1933, the Compania Exploradora Cotabambas turned over to the Pan American Grace Airways Inc., the job of transporting from Cuzco, the railhead of the Southern Railway of Peru, to its mine site at Huanaco-Cuzco some fifty-five tons of machinery for a complete hydroelectric installation to develop 1,500 horsepower, consisting of water wheels generators, switchboards and transformers.

This year the total load to be transported by airplane will be in the neighborhood of 600 tons. The machinery consists of an addition to the hydroelectric power plant of 750 horsepower; and a complete milling, amalgamating and cyaniding gold plant to treat 150 tons of ore every twenty-four hours. The primary crushing will be made by jaw crushers, secondary milling by falling stamps of 2,200 pounds weight each.

A normal trip from Cuzco to the mine by mule back requires from ten days to three weeks. The airport at Cuzco is at an altitude of 10,900 feet and the field at Huana-copampa is about 12,500 feet above sea level. The plane has to fly over an intervening mountain range 15,000 feet high.

The mine itself is located on the western side of the Rio Santo Tomas which flows from a southerly direction through the Apurimac Valley.

is a tri-motored Ford, similar to the human nature both stand on the ones used in regular scheduled pas- same ground."-Sir James Jeans. senger operation of Panagra and converted to a cargo plane. A hatch nine and three quarter feet long and four nurse at the breasts of government." and one half feet wide was cut in on the top of the fuselage for loading. The interior was fitted with a small trolley on rails and connected to a hand winch in order to place cargo in proper relation to the centre of gravity. Tests were made at Las Palmas airport, Lima, to prove that the plane could continue in level flight at 16,000 feet on only two mo-

In the course of the thirteen days an average of four flights per day was made. The transportation of the freight continued and some days as many as five round trips were made, and occasionally even six were made. Up to September 7th, 128 round trips had been accomplished in the twentynine days in which freight flying was done. The total weight of machinery transported amounts to almost 212 metric tons. The largest pieces carried weighed 1,983 kilos. The average load per trip was about 1,70 kilos. A Fairchild monoplane was sent to Cuzco as an auxiliary plane and has made eighteen round trips to Huanacopampa transporting a total weight of 11,-051 kilos.

To Speed Passenger Service Pan American-Grace will probably announce its schedule this week for operation from the Canal Zone through Colombia, Ecuador, Peru and Chile, across the Andes to Buenos Aires and Montevideo on the Atlantic side, with its four new Douglas liners

Meantime part of the fleet of the Fords capable of cruising at 115 to 120 miles per hour which the new craft will replace, will be used for local service and others for further transportation of heavy machinery t Andean points reached heretofore by the patient pack mule.

SOUTH AFRICA PAYS MILLIONS TO FIGHT LOCUST PESTS

ESHOWE, Natal, S Af.-Progress in using airplanes against locust attacks is reported from South Africa and more machines are to be mobilized against this pest.

More than £500,000 has been spent by the South African Government on its war against locusts in three months, it was announced by Dr. J. Viljoen, Secretary of Agriculture at an anti-locust conference here, attended by prominent members of Parliament and Natal farmers.

Locusts are one of the biggest menaces that South African farmers have to face. A swarm of them can destroy a flourishing crop in an hour. Dr. Viljoen said that the Agricultural Department had experimented on a large scale with airplanes, and locusts, after they had settled, could be destroyed effectively by this means, and with very little danger if properly controlled. They could do as much with one airplane in half an hour as could be done by 20 men in 10 days.

Dr. Viljoen declared that the Government would use more airplanes in its war against the pest and would hunt down the breeding plac-

The gravity of the locust danger to crops in Natal can be judged by the fact that one farmer reported that he had the previous day seen a swarm 30 miles long flying over the countryside.

WAS CONSTIPATED FOR THIRTY YEARS

Woman's Long Search For a Remedy

The trouble with most remedies for constipation, as this woman found, is that they give only temporary relief. Having at last found a permanent corrective, she writes to tell us about it:-

"For upwards of 30 years I was a victim of acute constipation. I tried practically everything that it was possible to try. 1 admit 1 was a chronic case, and every new remedy, I tried helped for a day or two-after that I was just as bad as ever. Three months ago 1 took my first taste of Kruschen Salts, and every morning since, and every morning as long as live, my first-duty upon arising is my Kruschen. I honestly feel a different woman. My bowels act to the clock, and my friends remark how well I am looking. My only regret is that I didn't try Kruschen years ago."-(Mrs.) A.

Kruschen Salts is Nature's recipe for maintaining a condition of internal cleanliness. The six salts in Kruschen stimulate your internal organs to smooth, regular action. Your system is thus kept clean of those impurities which, allowed to accumulate, lower the whole tone of the system.
